

## CONTENTS

<b>CHAPTER 1 GENERAL INTRODUCTION . . . . .</b>	<b>1</b>
1.1 Development of transit-time theory . . . . .	2
1.2 The klystron . . . . .	5
1.3 The travelling-wave amplifier . . . . .	8
1.4 The velocity-jump amplifier . . . . .	9
1.5 The space-jump amplifier . . . . .	10
1.6 Scalloped-beam amplification . . . . .	11
1.7 Resistive-wall amplifiers . . . . .	12
1.8 Double stream space-charge amplifiers . . . . .	12
1.9 Backward-wave oscillators . . . . .	13
1.10 The cascade backward-wave amplifier . . . . .	16
<b>CHAPTER 2 MAXWELL'S EQUATIONS AND WAVE EQUATIONS . . . . .</b>	<b>17</b>
2.1 Maxwell's equations and other basic laws . . . . .	17
2.2 Explicit forms for rectangular and cylindrical co-ordinate systems . . . . .	19
2.3 Types of wave . . . . .	20
2.4 The boundary conditions in electromagnetic problems . . . . .	24
2.5 Application to waveguide problems . . . . .	26
2.6 Orthogonal nature of the field expressions . . . . .	33
2.7 Generalizations of Maxwell's equations . . . . .	37
<b>CHAPTER 3 SLOW-WAVE STRUCTURES . . . . .</b>	<b>43</b>
3.1 The Brillouin diagram . . . . .	44
3.2 Simple filter circuits . . . . .	47
3.3 Special relations for slow waves . . . . .	51
3.4 Space-harmonics, sometimes called Hartree harmonics . . . . .	55
3.5 The disk-loaded waveguide . . . . .	57
3.6 Interdigital delay lines . . . . .	61
3.7 The helical delay line . . . . .	74
3.8 The Karp structure . . . . .	92
3.9 Structures derived from lumped circuit equivalents . . . . .	93

<b>CHAPTER 4 SPACE-CHARGE WAVE THEORY . . . . .</b>	<b>99</b>
4.1 Notation . . . . .	99
4.2 Space-charge waves in an unbounded beam of very large cross-section . . . . .	100
4.3 The cylindrical beam in a cylindrical tunnel . . . . .	103
4.4 The superposition of space-charge waves to match initial conditions . . . . .	107
4.5 Space-charge reduction factors for other geometries . . . . .	109
4.6 Space-charge waves on Brillouin beams . . . . .	112
4.7 Space-charge waves on confined beams . . . . .	119
4.8 The transmission-line analogy . . . . .	124
4.9 Power flow and space-charge waves . . . . .	128
4.10 The excitation of space-charge waves: elementary theory . . . . .	133
4.11 Space-charge waves in accelerating or retarding fields . . . . .	136
4.12 Space-charge waves in crossed fields . . . . .	141
4.13 Velocity distribution and the Liouville theorem . . . . .	145
4.14 Plasma oscillations . . . . .	150
4.15 Space-charge waves in relativistic beams . . . . .	155
<b>CHAPTER 5 MATCHING SPECIFIED INPUT CONDITIONS WITH SPACE-CHARGE WAVES . . . . .</b>	<b>159</b>
5.1 Beam filling the tunnel . . . . .	159
5.2 A cylindrical beam, not filling the tunnel . . . . .	167
5.3 Annular beams . . . . .	170
5.4 The Brillouin beam . . . . .	173
5.5 The confined beam . . . . .	174
5.6 The general boundary . . . . .	175
5.7 A beam in a helix . . . . .	178
<b>CHAPTER 6 SPACE-CHARGE WAVES IN KLYSTRONS . . . . .</b>	<b>188</b>
6.1 Two-resonator amplifier, single-mode theory . . . . .	188
6.2 Two-resonator amplifier, multi-mode theory . . . . .	192
6.3 Three-cavity amplifier. Single-mode theory . . . . .	197
6.4 Multi-cavity klystrons . . . . .	199
6.5 High efficiency working of multi-cavity klystrons . . . . .	205
6.6 Large signal effects . . . . .	209

## CONTENTS

vii

<b>CHAPTER 7 TRAVELLING-WAVE TUBES AND BACKWARD WAVE OSCILLATORS . . . . .</b>	<b>214</b>
7.1 The travelling-wave tube . . . . .	214
7.2 Interactions with forward and backward waves . . . . .	216
7.3 The ballistic theory of the T.W.A. . . . .	220
7.4 The field theory of the T.W.A. and the space-charge factor . . . . .	226
7.5 Exact results for the propagation constants . . . . .	233
7.6 Travelling-wave tube efficiency . . . . .	239
7.7 The backward-wave oscillator . . . . .	241
7.8 References on practical embodiments of B.W.O.s . . . . .	255
<b>CHAPTER 8 CROSSED FIELD DEVICES . . . . .</b>	<b>256</b>
8.1 The circuit and electronic equations for "M" devices . . . . .	257
8.2 Remarks on circuits in "M" devices . . . . .	261
8.3 The initial conditions . . . . .	263
8.4 The "M" carcinotron . . . . .	264
8.5 The "rising sun" effect . . . . .	269
8.6 The Diocotron . . . . .	269
8.7 The Carmatron . . . . .	271
<b>CHAPTER 9 SPECIAL SPACE-CHARGE WAVE DEVICES . . . . .</b>	<b>272</b>
9.1 Amplification by changes of space-wave impedance . . . . .	272
9.2 The Easitron . . . . .	274
9.3 The two-beam tube and related devices . . . . .	276
9.4 Backward-wave amplifiers . . . . .	278
9.5 Cascade backward-wave amplifiers . . . . .	279
9.6 Transverse current T.W.A. . . . .	281
9.7 "E" type devices . . . . .	284
9.8 Microwave detection . . . . .	285
<b>CHAPTER 10 NOISE PHENOMENA IN SPACE-CHARGE WAVE DEVICES . . . . .</b>	<b>288</b>
10.1 Shot noise in diodes . . . . .	289
10.2 Space-charge waves in the diode gun . . . . .	293
10.3 Noise factor for valves with input resonators . . . . .	297
10.4 Noise figure of T.W.A.s . . . . .	301
10.5 General theory . . . . .	306

**CHAPTER 10—*continued***

10.6 Partition noise . . . . .	312
10.7 The practical attainment of low noise figures . . . . .	316
10.8 The smoothing of current fluctuations near the potential minimum . . . . .	318
APPENDICES . . . . .	
Appendix 1 Power flow in a circular guide . . . . .	322
Appendix 2 Integrals of products of Bessel functions . . . . .	324
Appendix 3 The tape helix . . . . .	326
Appendix 4 Variational methods . . . . .	332
Appendix 5 Measurements on slow-wave structures . . . . .	337
Appendix 6 The focusing of long electron beams . . . . .	344
Appendix 7 Annular beams and Bessel function expansions . . . . .	364
Appendix 8 Solution of equation (134) Chapter 4 . . . . .	367
Appendix 9 Orthogonal expansions in Bessel functions . . . . .	368
Appendix 10 Coupling of modes of propagation . . . . .	371
Appendix 11 Excitation of the waves in T.W.A.s and B.O.W.s . . . . .	378
Appendix 12 Llewellyn's electronic equations . . . . .	382
PROBLEMS . . . . .	
RECENT REFERENCES . . . . .	390
LIST OF SYMBOLS . . . . .	392
INDEX . . . . .	394
