

CONTENTS

PREFACE	xvii
ACKNOWLEDGEMENTS	xix
CHAPTER 1. INTRODUCTION	1
1.1. The Detection of Atomic and Nuclear Radiations	1
1.1.1. Dosimeters	1
1.1.2. Track Visualization Instruments	2
1.1.3. Counters	2
1.1.4. Applications of Counters	3
1.2. Early History of the Scintillation Counter	4
1.2.1. Visual Scintillation Counters	4
1.2.2. Geiger Scintillation Counters	8
1.2.3. Photomultiplier Scintillation Counters	9
1.3. Principles of the Scintillation Counter	11
1.4. General Bibliography	12
1.5. References	13
CHAPTER 2. ABSORPTION OF THE INCIDENT RADIATION	15
2.1. Nature of the Radiations	15
2.2. Heavy Charged Particles	17
2.3. Electrons	21
2.4. Electromagnetic Radiations	24
2.4.1. The Compton Effect	26
2.4.2. The Photo-electric Effect	29
2.4.3. Pair Production	31
2.4.4. Multiple Processes	32
2.5. Neutrons	34
2.5.1. Scattering	34
2.5.2. Absorption	37
2.6. References	38
CHAPTER 3. THE SCINTILLATION PROCESS IN ORGANIC MATERIALS—I	39
3.1. The Electronic Structure of Organic Molecules	39
3.2. Excited States of π -Electron Systems	41
3.2.1. Classification on Free-electron Model	41
3.2.2. Absorption Spectra	45

3.3. Luminescence	48
3.3.1. Fluorescence	48
3.3.2. Phosphorescence and Delayed Fluorescence	50
3.3.3. Dimers	51
3.4. Classification of Organic Scintillators	53
3.5. Outline of Scintillation Phenomena	54
3.6. The Scintillation Mechanism	55
3.7. The Primary Processes	56
3.7.1. Excitation and Ionization	56
3.7.2. Primary Excitation Energy	58
3.7.3. Internal Conversion	58
3.8. Fluorescence of Unitary Systems	59
3.8.1. De-excitation Processes	59
3.8.2. Thin Crystals	60
3.8.3. Thick Crystals	60
3.9. Energy Transfer and Fluorescence in Binary Systems	61
3.10. Energy Transfer and Fluorescence in Ternary Systems	64
3.11. The Absolute Scintillation Efficiency	65
3.12. References	66
CHAPTER 4. THE SCINTILLATION PROCESS IN INORGANIC CRYSTALS—I	68
4.1. Introduction	68
4.2. The Energy Band Model	68
4.2.1. Perfect Crystals	68
4.2.2. Imperfect Crystals	70
4.3. Conditions for Luminescence of a Centre	72
4.4. Classification of Inorganic Phosphors and Scintillators	74
4.4.1. Phosphors	74
4.4.2. Scintillators	76
4.5. Outline of Scintillation Phenomena	77
4.6. Optical Properties of Alkali Halide Crystals	79
4.6.1. General	79
4.6.2. Absorption Spectra	79
4.6.3. Luminescence Spectra	81
4.7. Optical Properties of Thallium Activator Centres	84
4.7.1. Absorption Spectra	84
4.7.2. Luminescence Spectra	86
4.7.3. Theoretical Model	87
4.7.4. Photoluminescence Decay Times	88

CONTENTS

ix

4.8. The Scintillation Mechanism	89
4.8.1. Sequence of Processes	89
4.8.2. The Absolute Scintillation Efficiency	91
4.9. References	93
 CHAPTER 5. THE DETECTION OF SCINTILLATIONS	 96
5.1. Light Collection	96
5.1.1. Self-absorption in the Scintillator	96
5.1.2. Light Trapping	97
5.1.3. Reflectors	99
5.1.4. NaI(Tl) Crystal Assemblies	102
5.1.5. Light Guides and Couplers	103
5.2. Spectral Response	104
5.2.1. Spectral Matching	104
5.2.2. Factors Determining Cathode Spectral Response	105
5.2.3. Specification of Cathode Response and Sensitivity	108
5.2.4. Types of Photocathode	110
5.3. Photomultipliers	113
5.3.1. Dynode Structures	113
5.3.2. Cathode-First Dynode Structures	115
5.3.3. Uniformity of Photocathode Response	116
5.3.4. Gain	118
5.3.5. High Tension Supply	119
5.3.6. The Anode	120
5.3.7. Feedback and Satellite Pulses	121
5.3.8. Other Background Effects	122
5.3.9. Fatigue	123
5.3.10. Magnetic Field Effects	123
5.3.11. Dark Noise	124
5.3.12. Reduction of Effect of Dark Noise	126
5.3.13. Temperature Dependence of Sensitivity and Response	130
5.3.14. Commercial Photomultipliers	133
5.4. Pulse Amplitude Resolution	148
5.4.1. Theoretical Studies	149
5.4.2. Factors Contributing to Line Width	152
5.4.3. Scintillator Resolution	154
5.4.4. Experimental Studies	154
5.4.5. Anthracene Excited by Electrons	156
5.4.6. Sodium Iodide (Thallium) Excited by γ-Rays	157
5.5. Pulse Shape and Time Resolution	169
5.5.1. The Light Pulse and Photo-electron Emission	169
5.5.2. The Single Electron Response	170
5.5.3. The Anode Pulse Shape	174
5.5.4. Statistics and Time Resolution	176
5.5.5. Effect of Anode Pulse Shape on Pulse Amplitude Resolution	179
5.6. References	180

CHAPTER 6. THE SCINTILLATION PROCESS IN ORGANIC MATERIALS-II	185
6.1. The Scintillation Response to Different Ionizing Radiations	185
6.1.1. Review of Experimental Data	185
6.1.2. Ionization Quenching	187
6.1.3. Bimolecular Quenching	192
6.1.4. Static and Dynamic Quenching	195
6.1.5. Response to Heavy Ions	196
6.1.6. Kinetics of Quenching	197
6.2. Surface Quenching Effects	200
6.3. Radiation Damage	205
6.3.1. Crystals	205
6.3.2. Plastic Solutions	211
6.3.3. Liquid Solutions	212
6.4. The Scintillation and Fluorescence Decay of Pure Crystals	212
6.4.1. Theory	212
6.4.2. Anthracene	214
6.4.3. Other Crystals	219
6.5. The Slow Scintillation Component	219
6.5.1. Review of Experimental Data	219
6.5.2. Theories of Origin	223
6.6. The Scintillation Decay of Solutions	227
6.6.1. Theory of Binary Solutions	227
6.6.2. Review of Experimental Data	229
6.6.3. Ternary Solutions	231
6.7. References	232
CHAPTER 7. ORGANIC CRYSTAL SCINTILLATORS	235
7.1. Introduction	235
7.2. Anthracene	236
7.2.1. Crystal Structure	236
7.2.2. Absorption Spectra	236
7.2.3. Anthracene as a Scintillator Standard	238
7.2.4. Purification and Crystal Growth	240
7.2.5. Scintillation Efficiency	241
7.2.6. Other Data	244
7.3. Other Organic Crystals	244
7.3.1. Relative Efficiencies	244
7.3.2. Scintillation Decay Times	251
7.3.3. <i>trans</i> -Stilbene	252
7.3.4. Diphenylacetylene	254
7.3.5. <i>p</i> -Terphenyl	256
7.3.6. <i>p</i> -Quaterphenyl	256
7.3.7. 1,4-Diphenylbutadiene	256

7.4. Mixed Organic Crystals and Exciton Migration	256
7.4.1. Review of Experimental Studies	256
7.4.2. Energy Transfer and Exciton Migration	257
7.4.3. Response Anisotropy	260
7.4.4. Exciton Lifetime	261
7.4.5. Low Temperature Behaviour	263
7.4.6. Radiative Transfer	263
7.4.7. Mixed Crystal Scintillators	265
7.5. References	266
CHAPTER 8. ORGANIC LIQUID SCINTILLATORS	269
8.1. Introduction	269
8.2. Pure Solvents	272
8.3. Mixed Solvents and Loading with other Compounds	278
8.3.1. Mixed Solvents	278
8.3.2. Naphthalene as an Additive	279
8.3.3. Boron Loading	281
8.3.4. Dioxane Mixtures	282
8.4. Primary Solutes	282
8.4.1. Initial Studies	282
8.4.2. The Oxazoles, Oxadiazoles and Related Compounds	283
8.4.3. The Substituted <i>p</i>-Oligophenylenes	290
8.5. Secondary Solutes	291
8.6. Spectral Effects	296
8.7. Oxygen Quenching	299
8.7.1. Experimental Studies	299
8.7.2. Elimination of Oxygen	300
8.8. Temperature Effects	301
8.9. Scintillation Decay Times	302
8.10. Energy Migration and Transfer	304
8.10.1. Initial Studies	304
8.10.2. Ultraviolet Excitation Studies	305
8.10.3. PPO-Xylene Solutions	307
8.10.4. Impurity Quenching Studies	308
8.10.5. Dipole-Dipole Interaction	310
8.10.6. Effect of Molecular Diffusion	311
8.10.7. Description of Solvent-Solute Transfer Process	312
8.10.8. The Domain Hypothesis	312
8.10.9. Solute-Solute Energy Transfer	314
8.11. Concentration Quenching and Dimer Formation	315
8.12. References	317

CHAPTER 9. ORGANIC PLASTIC SCINTILLATORS	321
9.1. Introduction	321
9.2. Preparation of Plastic Scintillators	323
9.3. Solvents	325
9.3.1. Relative Efficiencies	325
9.3.2. Mixed Solvents	327
9.3.3. Influence of Molecular Weight	328
9.4. Primary and Secondary Solutes	329
9.5. Optical Transmission	337
9.6. Temperature Effects	338
9.7. Loading with Heavy Elements	339
9.8. Scintillation Decay Times	340
9.9. Organic Glasses	342
9.10. Energy Transfer	342
9.10.1. Radiative and Non-radiative Transfer	342
9.10.2. Non-radiative Transfer and Migration	344
9.10.3. Impurity Quenching Studies	346
9.10.4. Polymer Chain Attachment	346
9.10.5. Stereo-isomerism	347
9.11. Molecular Structure and Scintillation Properties	348
9.11.1. Solvents	348
9.11.2. Solutes	350
9.12. References	351
CHAPTER 10. APPLICATIONS OF ORGANIC SCINTILLATORS	354
10.1. Properties and Uses of Organic Scintillators	354
10.2. β -Particle Detection and Spectrometry	355
10.2.1. β -Particle Detection	355
10.2.2. Internal-sample Liquid Scintillation Counting	361
10.2.3. Incorporation of the Specimen	361
10.2.4. Low-level Counting Systems	366
10.2.5. β -Particle Spectrometry	370
10.2.6. Scintillators in Magnetic Spectrometers	375
10.3. γ -Ray Detection and Spectrometry	377
10.3.1. γ -Ray Spectrometry	377
10.3.2. γ -Ray Detection	381
10.4. Fast Neutron Detection and Spectrometry	384
10.4.1. Single Scintillator Spectrometry	384
10.4.2. Neutron- γ -Ray Discrimination	388
10.4.3. Heterogeneous Scintillators for n/γ Discrimination	389
10.4.4. The "Twin" Fast Neutron Detector	390
10.4.5. Pulse Shape Discrimination	392

10.5. Coincidence Methods	394
10.5.1. Introduction	394
10.5.2. Coincidence Circuits and Timing Devices	396
10.5.3. Absolute Source Calibration	397
10.5.4. γ-Ray Angular Correlation and Polarization Studies	399
10.5.5. Positron Annihilation Studies	402
10.5.6. Delayed Coincidences and Lifetimes of Excited States of Nuclei	403
10.5.7. Coincidence β-Particle and γ-Ray Spectrometry	406
10.5.8. Coincidence Spectrometry of Fast Neutrons	408
10.5.9. Time-of-flight Spectrometry of Fast Neutrons	409
10.6. High Energy and Elementary Particle Studies	411
10.6.1. Large Scintillators	411
10.6.2. Counter Telescopes	413
10.6.3. Scintillation Chambers	419
10.6.4. Neutron and Neutrino Studies	420
10.7. References	422
CHAPTER 11. THE SCINTILLATION PROCESS IN INORGANIC CRYSTALS—II	431
11.1. The Scintillation Response to γ-Rays and Electrons	431
11.1.1. Sodium Iodide (Thallium)	431
11.1.2. Caesium Iodide (Thallium)	436
11.1.3. Discussion	437
11.2. The Scintillation Response to Heavy Ionizing Particles	437
11.2.1. Sodium Iodide (Thallium)	437
11.2.2. Effect of Tl Concentration	439
11.2.3. Caesium Iodide (Thallium)	439
11.2.4. Other Alkali Halides	443
11.3. Theory of the Scintillation Response	443
11.3.1. Review of the Data	443
11.3.2. The Murray-Meyer Model	444
11.3.3. Comparison with Organic Scintillators	447
11.3.4. The Effect of δ-Rays	450
11.4. The Scintillation Rise and Decay	451
11.4.1. Sodium Iodide (Thallium)	451
11.4.2. Temperature Dependence in NaI(Tl) and "Pure" NaI	453
11.4.3. Caesium Iodide (Thallium)	456
11.4.4. Other Alkali Halides	458
11.5. Effect of Temperature on Scintillation Efficiency	459
11.5.1. Theoretical Model	459
11.5.2. "Pure" Alkali Halides	460
11.5.3. Sodium Iodide (Thallium)	464
11.5.4. Caesium Iodide (Thallium)	465
11.5.5. An Approach to a General Theory	466
11.6. References	467

CHAPTER 12. ALKALI HALIDE CRYSTAL SCINTILLATORS AND THEIR APPLICATIONS	470
12.1. Sodium Iodide (Thallium)	470
12.1.1. Review of Previous Data	470
12.1.2. Crystal Preparation	471
12.1.3. Scintillation Efficiency	473
12.1.4. The Photon Interaction Ratio	474
12.1.5. Scattered Radiation	477
12.1.6. The Photon Escape Peaks	478
12.1.7. The Iodine Escape Peak	479
12.1.8. X-Ray Spectrometry	481
12.1.9. The Photo-fraction and γ -Ray Detection Efficiency	482
12.1.10. γ -Ray Spectrometry	489
12.1.11. The Spectrometer Response Function	491
12.1.12. Pulse Amplitude Analysers	493
12.1.13. Total Absorption and Summing Spectrometers	494
12.1.14. Anti-coincidence Shielding	495
12.1.15. Coincidence Spectrometers	498
12.1.16. Neutron Absorption	505
12.1.17. Human γ -Ray Spectrometry	506
12.1.18. Detection of High-energy γ -Rays and Electrons	507
12.1.19. Other Applications	508
12.2. Caesium Iodide (Thallium)	509
12.2.1. Review of Previous Data	509
12.2.2. Crystal Preparation	509
12.2.3. Scintillation Efficiency and Emission Spectrum	510
12.2.4. γ -Ray Spectrometry	511
12.2.5. Heavy Particle and Fast Neutron Spectrometry	513
12.2.6. Particle Discrimination	517
12.2.7. Dual Scintillator Systems	521
12.3. Lithium Iodide Phosphors	523
12.3.1. Slow Neutron Detection	523
12.3.2. Fast Neutron Spectrometry	525
12.4. Potassium Iodide (Thallium)	527
12.5. "Pure" Alkali Halides	529
12.5.1. Sodium Iodide	529
12.5.2. Caesium Iodide	531
12.5.3. Low Temperature Studies	532
12.6. Other Alkali Halides	533
12.6.1. Rubidium Iodide (Thallium)	533
12.6.2. Caesium Fluoride	533
12.6.3. Caesium Bromide (Thallium)	534
12.6.4. Other Materials	534
12.7. References	535
CHAPTER 13. OTHER INORGANIC SOLID SCINTILLATORS AND THEIR APPLICATIONS	541
13.1. Zinc Sulphide	541
13.1.1. Detection and Scintillation Efficiencies	541
13.1.2. Scintillation Decay	544

13.1.3. Heavy Particle Detection	545
13.1.4. Scintillation Response	546
13.1.5. Radiation Damage	546
13.1.6. Fast Neutron Detection	547
13.1.7. Slow Neutron Detection	550
13.2. Cadmium Sulphide	551
13.3. The Tungstate Phosphors	552
13.4. Inorganic Glass Scintillators	554
13.4.1. Composition and Scintillation Efficiency	554
13.4.2. Slow Neutron Detection	558
13.5. Other Inorganic Scintillators	562
13.5.1. Boron Compounds	562
13.5.2. Diamond	563
13.5.3. Scintillators and Phosphors Containing Various Elements	564
13.6. References	564
CHAPTER 14. GAS SCINTILLATORS AND THEIR APPLICATIONS	570
14.1. Nitrogen and Air	570
14.1.1. Introduction	570
14.1.2. Emission Spectrum	570
14.1.3. Scintillation Efficiency and Collisional Quenching	573
14.1.4. Scintillation Decay Times	576
14.1.5. Background Luminescence from Air, Glass and Quartz	579
14.2. The Inert Gases	580
14.2.1. Introduction	580
14.2.2. The Primary Processes	581
14.2.3. Emission Spectra	582
14.2.4. Scintillation Decay Times	585
14.2.5. The Effect of Nitrogen	589
14.2.6. Fluorescent Converters and Practical Scintillation Efficiencies	592
14.2.7. Mixtures of Inert Gases	597
14.2.8. Scintillation Response to Different Particles	599
14.2.9. Applications of Gas Scintillators	600
14.2.10. Light Amplification by an Electric Field	603
14.2.11. High-pressure Gas Scintillators	605
14.2.12. Neutron Detection and Spectrometry	607
14.3. Liquid and Solid Inert Elements	609
14.3.1. Scintillation Properties	609
14.3.2. Liquid Helium	610
14.3.3. Neutron Polarimetry	611
14.4. References	612
CHAPTER 15. CONCLUSION	615
References	618
CHAPTER 16. POSTSCRIPT	619
3.7.1. The Primary Processes in Organic Materials	619
3.7.3. Internal Conversion in Organic Materials	619
5.1.5. Light Guides and Couplers	620

5.3.9. Photomultiplier Fatigue	620
5.3.12. Reduction of Effect of Dark Noise	620
5.3.14. Commercial Photomultipliers	620
5.4. Pulse Amplitude Resolution	621
5.5.4. Statistics and Time Resolution	621
5.5.5. Effect of Anode Pulse Shape on Pulse Amplitude Resolution	621
6.1. Scintillation Response of Anthracene to Different Ionizing Radiations	622
6.3.3. Radiation Damage of Liquid Solutions	622
6.4. The Scintillation Decay of Organic Crystals	622
6.5. The Slow Scintillation Component in Organic Systems	623
7.3. Scintillation and Fluorescence Efficiencies of Organic Crystals	624
7.4. Mixed Organic Crystals	625
7.4.3. Scintillation Response Anisotropy	625
8.2. Liquid Scintillator Solvents	625
8.4. Liquid Scintillator Solutes	628
8.9. Liquid Scintillator Decay Times	628
8.10. Energy Migration and Transfer	630
8.11. Dimer Formation	631
9.2. Preparation of Plastic Scintillators	632
9.8. Plastic Scintillator Decay Times	632
9.10. Energy Transfer in Plastic Scintillators	632
10.2. β -Particle Detection and Spectrometry	633
10.5. Coincidence Methods	633
11.1. Scintillation Response of NaI(Tl) and CsI(Tl) to X-Rays and γ -Rays	634
11.4.3. Temperature Dependence of Decay Time and Efficiency of CsI(Tl) and "Pure" CsI	634
12.1.5. Scattered Radiation in γ -Ray Spectrometry	634
12.1.9. The Photo-fraction and γ -Ray Detection Efficiency	635
12.1.13. Total Absorption and Summing Spectrometers	635
12.1.14. Anti-coincidence Shielding	635
12.1.15. Sum-coincidence Spectrometry	636
12.2.5. Heavy Particle Spectrometry	636
12.2.7. Dual Scintillator Systems	636
13.1.6. Intermediate Energy Neutron Detection	636
13.4. Inorganic Glass Scintillators	637
13.5. Other Inorganic Scintillators	637
14.2. Inert Gases	638
14.2.10. Light Amplification by an Electric Field	638
14.3.2. Liquid Helium and Argon	638
