

Table of Contents

Author's Preface	11
Chapter 1 Introduction	13
Chapter 2 Mathematical techniques	
2.1 Introduction.	21
2.2 Singularity functions	22
2.3 The Fourier transform	25
2.4 Stochastic processes.	28
2.5 Energy theorems	30
2.6 Random pulse trains	34
2.7 Simple shot noise	37
2.8 Thermal noise.	39
2.9 Non-stationary processes.	42
2.10 The Wiener–Levy process	43
2.11 MacDonalD's function	46
2.12 Cross-correlation, cross-spectra and coherence.	47
2.13 Linear systems	49
2.14 Pulse-train pairs.	51
Chapter 3 Noise in linear networks	
3.1 Introduction.	55
3.2 Two-terminal networks.	55
3.3 Linear two-ports	58
3.4 Noise figure of a linear two-port.	62
3.5 Noise figure of amplifiers in cascade	67
Chapter 4 Inherent noise in junction diodes and bipolar transistors	
4.1 Introduction.	71

4.2	The diffusion theory of noise in a p–n junction	73
4.2.1	Thermal fluctuations in minority carrier flow	77
4.2.2	Bulk region recombination–generation noise	82
4.2.3	Total noise in the junction	84
4.2.4	The long diode	84
4.2.5	The short diode.	86
4.2.6	Summarizing comments	88
4.3	Depletion-layer recombination noise	89
4.3.1	The noise mechanism	89
4.4	The bipolar transistor.	95
4.5	Noise figure of the ‘intrinsic’ transistor	101
4.6	The low-frequency equivalent circuit including base resistance	105
4.7	The effect of $1/f$ noise on the noise figure	108
4.8	The problem of low source resistance	108
Chapter 5 Noise in JFETs and MOSFETs		
5.1	Introduction.	112
5.2	Operating characteristics of the JFET	112
5.3	Noise sources in the JFET.	117
5.4	Thermal noise in the JFET	118
5.4.1	Thermal noise in the output current	118
5.4.2	Thermal noise in the gate	120
5.4.3	Series resistance in the channel.	122
5.4.4	High-frequency effects	123
5.5	Generation–recombination noise	125
5.5.1	Depletion-layer generation noise.	125
5.5.2	Channel noise.	128
5.5.3	Leakage current noise.	129
5.6	Generation–recombination noise experiments	129
5.7	High field effects.	133
5.8	$1/f$ noise in JFETs.	134
5.9	Equivalent circuits for the JFET.	135
5.10	Noise in MOSFETs	137
Chapter 6 $1/f$ noise		
6.1	Introduction.	143
6.2	Scale invariance.	145
6.3	Stationarity	147
6.3.1	Band-limited $1/f$ noise	147
6.3.2	Low-pass filtered $1/f$ noise	149
6.3.3	Stationarity and theoretical modelling.	150
6.3.4	Comparison with the random walk	151

6.4	$1/f$ waveforms.	152
6.4.1	A random pulse train model of $1/f$ noise	152
6.4.2	Superposition of relaxation process.	156
6.5	Fractional-order integration.	157
6.6	Experimental evidence	157
6.6.1	Contact noise?	158
6.6.2	The amplitude distribution of $1/f$ noise	158
6.6.3	Resistance fluctuations.	159
6.6.4	Hooke's hypothesis	160
6.6.5	Number fluctuations	162
6.6.6	Mobility fluctuations	163
6.6.7	Volume versus surface effects	163
6.6.8	Temperature-dependent spectra	164
6.6.9	Amorphous and polycrystalline materials.	166
6.7	Physical mechanisms and theoretical models.	167
6.7.1	$1/f$ noise in a lossy capacitor	167
6.7.2	Surface trapping in semiconductors.	169
6.7.3	Temperature fluctuations in metal films.	171
6.7.4	Random-service queueing	174
6.7.5	Quantum theory of $1/f$ noise	174
6.8	Concluding remarks	175

Chapter 7 Burst noise

7.1	Introduction.	180
7.2	Reverse-biased p-n junctions	180
7.3	Forward-biased p-n junctions.	188
7.4	Burst noise in resistors	194
7.5	The statistics of bistable burst noise	195

Chapter 8 Noise in oscillators

8.1	Introduction.	201
8.2	Free oscillations in the van der Pol oscillator.	202
8.3	Forced oscillations.	205
8.4	The output noise.	206
8.5	The output spectrum	207
8.6	The linearization technique	210
8.7	The AM noise spectrum	213
8.8	The PM noise spectrum.	215
8.9	Concluding remarks	216

Chapter 9 Tunnel diodes and parametric amplifiers

9.1	Introduction.	219
9.2	The tunnel diode.	219

9.3	Noise in tunnel diodes	223
9.3.1	Shot noise in the tunnel currents	223
9.3.2	Noise in the excess current	225
9.3.3	Noise in the injection current.	225
9.4	Tunnel diode amplifiers	226
9.4.1	The equivalent circuit.	226
9.4.2	The gain of a tunnel diode amplifier	227
9.4.3	The noise figure of a tunnel diode amplifier	229
9.5	The parametric amplifier.	232
9.5.1	Principle of operation.	232
9.5.2	The power gain of the amplifier	234
9.5.3	The noise figure	236
9.5.4	Concluding remarks.	238
Chapter 10 Hot electron devices		
10.1	Introduction.	241
10.2	Hot electrons	241
10.3	Physics of transit-time devices	244
10.3.1	The Impatt.	245
10.3.2	The Trapatt	248
10.3.3	The Baritt	252
10.4	Avalanche noise	256
10.5	Noise in transit-time amplifiers.	258
10.5.1	Impatts	258
10.5.2	Trapatts.	261
10.5.3	Baritts.	262
10.6	Physics of the transferred-electron oscillator.	264
10.7	Noise in Gunn oscillators	266
10.7.1	Johnson noise.	267
10.7.2	1/f noise	270
Chapter 11 Quantum mechanics and noise		
11.1	Introduction.	275
11.2	The uncertainty principle	276
11.3	Quantum limit to amplifier noise	278
11.4	Nyquist's theorem and quantum mechanics	281
11.5	Absorption and emission of radiation by matter	283
11.5.1	Energy exchange in a two-level system.	284
11.5.2	Maser action.	287
11.6	Noise in the Maser	288
11.6.1	Thermal noise.	288
11.6.2	The noise figure	291
11.6.3	Shot noise	293
11.7	Concluding remarks	293

Chapter 12 Josephson junction devices

12.1	Introduction.	295
12.2	Superconductivity	296
12.3	The Josephson junction	299
12.4	Josephson interferometers.	302
12.4.1	The d.c. SQUID	303
12.4.2	The a.c. SQUID.	306
12.5	Noise in Josephson junction devices	307
12.5.1	Shot noise in a Josephson junction	307
12.5.2	Thermal noise in the d.c. Josephson effect	309
12.5.3	Noise in the RSJ	309
12.5.4	Noise in the d.c. SQUID	310
12.5.5	Noise in the RF SQUID	311

Chapter 13 Gravitational radiation detectors

13.1	Introduction.	314
13.2	Gravitational-wave detectors	316
13.3	Minimum detectable energy.	318
13.4	Signal recovery from a gravitational antenna.	323
13.4.1	Equivalent circuit of a resonant-mass antenna	323
13.4.2	The gravitational pulse	325
13.4.3	Noise generators in the equivalent circuit	327
13.4.4	The optimum filter	329
13.4.5	The signal/noise ratio	331
13.5	Comparison of the Weber bar with the split bar.	333
13.6	The current status of gravitational-wave detection	334
13.6.1	Cryogenic resonant-mass detectors	335
13.6.2	Spacecraft Tracking.	336
13.6.3	Room-temperature laser interferometry.	336
13.7	Concluding remarks	336

Appendix 1	Thermal noise and the Poisson distribution.	339
-------------------	---	-----

Appendix 2	Nyquist's treatment of thermal noise in a resistance.	344
-------------------	---	-----

Appendix 3	Mobility, Brownian velocity and diffusion	347
-------------------	---	-----

Appendix 4	Noise due to carriers crossing the depletion layer.	351
-------------------	---	-----

Appendix 5	Formal solution for the output noise of an oscillator	355
-------------------	---	-----

Appendix 6	Current-voltage relations for a parametric amplifier	360
-------------------	--	-----

Appendix 7	Minimum noise in an amplifier.	364
-------------------	--	-----

Index	369
--------------	-----------	-----
