

CONTENTS

Foreword	ix
Preface	xi

1 CIRCUIT ANALYSIS FROM AN ELECTROMAGNETIC VIEWPOINT; DESIGN OPTIMISATION BEYOND THE SCOPE OF CONVENTIONAL CIRCUIT ANALYSIS TECHNIQUES

1.1 Introduction	1
1.2 Skin and Proximity Effects	2
1.3 Inductor Coils	5
1.4 Transformers	10
1.5 Electromagnetics in Power Converters	12

2 POYNTING VECTOR, A METHOD TO DESCRIBE THE MECHANISM OF POWER CONDITIONING

2.1 Historical Perspectives	15
2.2 The Energy Flux Viewpoint of Power Electronics	17
2.3 Propagation of a Pulse along a Transmission line	18
2.4 Poynting Vector in Power Lines	19
2.5 Flow of Energy around Obstacles	23
2.6 Poynting Vector in Capacitors	24
2.7 Poynting Vector in Inductors	26
2.8 Poynting Vector in Transformers	28
2.9 Poynting Vector in Electric Machines	31
2.10 References	32

3 POWER CONDITIONING IN ELECTRONIC CIRCUITS

3.1 Introduction	35
3.2 Energy Flow in a Switchmode Circuit Example	36
3.3 Power Transfer Efficiency	38
3.4 Modelling of Connection Structures in Circuits	41
3.5 Circuit Representation of Connection Structures	42
3.6 Interaction between Connection Structures and Electronic Switches	44

3.7 A Connection Structure as a General Purpose	
Power Conditioning Element	46
3.8 References	48
4 EDDY CURRENTS IN CONDUCTORS	
4.1 The Eddy Current Phenomena	49
4.2 Application of Maxwell's Equations	50
4.3 Numerical Methods	53
4.4 Analytical Methods	55
4.5 One Dimensional Solutions	56
4.6 References	64
5 STRUCTURAL IMPEDANCES OF POWER CONNECTIONS; ANALYSIS AND METHOD OF CALCULATION	
5.1 Considerations on Calculation of Parasitic Impedances	67
5.2 External Impedance	70
5.3 Internal Impedance	72
5.4 Predictions and Experimental Measurements	78
5.5 References	81
6 SKIN AND PROXIMITY EFFECT LOSSES IN TRANSFORMER AND INDUCTOR WINDINGS	
6.1 Orthogonality of Current Density Distribution	83
6.2 Eddy losses in Round and Strip Conductors	85
6.3 Eddy Losses in Stranded Wires	88
6.4 Current Distribution along the Width of Strip Windings	90
6.5 Manifestation of Eddy Currents in Winding Sections	93
6.6 References	96
7 MAGNETIC FIELD INSIDE WINDINGS; A KEY PARAMETER IN THE PROXIMITY EFFECT EQUATION	
7.1 Winding "Stray" Magnetic Field	97
7.2 Method of Images	98
7.3 Method of Images to Calculate the Stray Magnetic Field in Windings	100
7.4 Magnetic Field of a Rectangular Uniform Current Distribution	103
7.5 Magnetic Field of Circular Current Filaments	105
7.6 References	106

8 EXPERIMENTAL MEASUREMENT OF EDDY CURRENT LOSSES IN TRANSFORMER WINDINGS AND INDUCTOR COILS

8.1 Methods of Measuring the Effective Resistance of Inductor Coils	107
8.2 Measurements on Single Layer Coils and Comparison of Algorithm with Butterworth's Equations	108
8.3 Measurement of Multilayer Coils and Transformer Windings	113
8.4 References	124

9 EVALUATION AND CONCLUSIONS

9.1 Modelling of Energy Flow with the Poynting Vector	125
9.2 Structural Impedance of Power Connections	126
9.3 Formulae to Calculate Conductor Losses in Magnetic Components	126
9.4 Experimental procedure to measure ac resistance	127
9.5 References	128

A EXPERIMENT FOR DETERMINING THE AC RESISTANCE OF INDUCTOR COILS AND TRANSFORMER WINDINGS

129

B COMPUTER PROGRAM PIP (Parasitic Impedance Program)

145

C COMPUTER PROGRAM TID

(Transformer and Inductor Design) 151

D COMPUTER PROGRAM CID (Coil Inductor Design)
