| FOREWORD | v |
| PREFACE | vii |
| CONTENTS OF VOLUME II | xiii |

A. The capacitor, its characteristics and its applications in a discharge circuit

| | |
|--|----|
| 1. Capacitors in Discharge Circuits in General and the Equivalent Circuit Diagram | 1 |
| 2. Characteristics of Dielectric Material | 3 |
| 3. Tables of Properties of Dielectric Materials Used for Capacitors | 11 |
| 4. Specifications and Standards of Capacitors | 18 |
| 5. Faults Which May Occur in Fixed Capacitors | 24 |
| 6. Basic Combinations of <i>RCL</i> Elements in the Circuitry | 27 |
| 7. Calculation and Layout of Capacitors for Discharge Operation | 36 |
| 8. The Capacitor with Large Energy Content for Powerful Single Discharges | 41 |
| 9. The Impulse Capacitor in Cyclic Charging Operation | 44 |
| 10. Periodic Discharge Operation | 49 |
| 11. Capacitor Battery for Continuously High Output in Discharge Operation (Impulse Welding Operation) | 53 |
| 12. Capacitors Having Extremely High Insulation Values | 56 |
| 13. Capacitor Lines with Constant Impedance per Unit of Length | 56 |

B. Switching means

| | |
|---|-----|
| 1. Thyratrons | 59 |
| 2. The Ignitron | 97 |
| 3. The Multivibrator | 100 |
| 4. Symmetrical Switch Tubes with Mercury Filling | 107 |
| 5. Fixed Spark Gaps | 113 |
| 6. Moving Spark Gaps | 138 |
| 7. The Lightning Protector | 157 |
| 8. The Actuation of Magnetic Contactors at Predetermined Phase Angles | 159 |
| 9. Quenching Spark Gaps | 163 |

C. Line conductors

| | |
|--|-----|
| 1. The Influence of Impedance | 172 |
| 2. The Overhead Line for High and Highest Voltages with Large Conductor Radius | 173 |
| 3. The Coaxial Cable | 174 |
| 4. Energy Considerations | 176 |
| 5. Sandwich Lines | 177 |
| 6. Compensation Conductor Forms | 179 |

D. Conversion of capacitor energy into current impulses

- | | |
|--|-----|
| 1. Direct Discharge Through a Conductor | 182 |
| 2. The Transformed Discharge for Highest Current Peaks | 186 |

E. Conversion of capacitor energy into voltage impulses

- | | |
|--|-----|
| 1. The Cascade Circuit | 196 |
| 2. The Nondistorting Pulse Transformer | 200 |
| 3. High Peak Power Transformers with Differentiating Characteristics | 210 |
| 4. Impulse Setups for Cyclic Operation and Very Short Impulse Duration | 218 |
| 5. Pulse-Forming Network | 227 |
| 6. Cable Discharge Lines and Pulse Generators | 234 |
| 7. Spark Gap Triggering Device by Marx | 249 |
| 8. Ignition Transformer for Internal Combustion Engines | 256 |
| 9. Voltage Impulses in Extensive Networks | 258 |
| 10. Automatic Overhead Line Protection by Means of Periodic Capacitor Discharges | 260 |
| 11. Lightning Flashes in Nature as Capacitor Discharges | 263 |
| 12. Steepness of Voltage Shock Pulses | 266 |
| 13. The Operation of Kerr Cells by High-Voltage Impulses | 269 |
| 14. Biological Applications of Voltage Impulses in Electrical Fishing | 281 |

F. Conversion of capacitor energy into x-ray flashes and neutrons

- | | |
|--|-----|
| 1. Physics, Design, and Circuitry in x-Ray Flashing | 292 |
| 2. x-Ray Irradiation of Subjects in Mechanical Motion | 310 |
| 3. Capacitor Discharges in Feeding Ion and Neutron Sources | 330 |

G. Conversion of capacitively stored energy into heat

- | | |
|---|-----|
| 1. Impulse Welding, Direct Capacitor Discharge | 338 |
| 2. The Transformed Capacitor Discharge in Welding Engineering | 340 |
| 3. Electrodynamic "Cooling" by Particle Ejection in Capacitor Impulse Welding | 356 |
| 4. Microinduction Hardening—Application of Instant Heating by a Capacitive Energy Impulse | 362 |
| 5. High-Frequency Heating by Rapid Impulse Sequences the Blast Spark High-Frequency Generator by Marx | 373 |
| 6. Annealing of Wires by Means of Capacitor Discharge Pulses | 376 |
| 7. Exploding Wire Discharges | 379 |
| 8. High-Temperature Plasma Generation by High-Energy Capacitor Discharges | 391 |

H. Conversion of capacitively stored energy into magnetic fields

- | | |
|--|-----|
| 1. The Creation of Very Intensive Magnetic Fields for Short Duration | 402 |
|--|-----|

CONTENTS

xi

| | |
|--|-----|
| 2. Application of Strong Magnetic Shock Fields in Nuclear Physics | 409 |
| 3. Capacitor Discharges in Magnetic Plasma Generation and Acceleration | 411 |
| 4. Capacitor Discharge Magnetizers | 434 |
| 5. The Magneto-Optical Shutter—Application of the Faraday Effect | 444 |
| 6. Metal Forming with Pulsed Magnetic Fields | 450 |

I. Conversion of capacitively stored energy into acoustic impulses

| | |
|--|-----|
| 1. Conversion by Electroacoustic Converters and Applications | 454 |
| 2. Air Impulse Sound | 465 |
| 3. Shock Sound by Underwater Capacitor Discharges | 476 |
| 4. Applications of High Intensity Shock Group | 503 |
| 5. The Photography of Discharge Sound Shocks and Its Technical Application | 530 |

J. Material working by high-frequency capacitor discharges (spark erosion)

| | |
|---|-----|
| 1. Facts and Purposes of the Mechanism of Spark Erosion | 538 |
| 2. Electro-Erosion Machining of Metals | 539 |
| 3. Shaping Metals by Electrical Explosion Shock Wave | 555 |

| | |
