CONTENTS

PREFACE TO THE	ENGLISH	EDITION 1	BY	PIERRE GRIVET	
----------------	---------	-----------	----	---------------	--

PART I. ELECTRON LENSES

ix

1.	FUNDAMENTAL FEATURES AND BASIC TECHNIQUES	
	1.1 The Historical Background	3
	1.2 Outline of a Demonstration in Electron Optics	4
	1.3 The Object	5
	1.4 The Fluorescent Screen	11
	1.5 Photography	14
	1.6 The Optical Bench	15
2.	The Distribution of Potential and Field in Electrostatic Lenses	
	2.1 Solution of the Laplace Equation	20
	2.2 The Electrolytic Tank	21
	2.3 The Resistance Network	30
3.	THE FIELD DISTRIBUTION IN MAGNETIC LENSES	
	3.1 Direct Calculation of the Magnetic Field	34
	3.2 Direct Methods of Measuring the Induction B and its Gradient	35
	3.3 The Use of Electrical Analogues	40
4.	THE OPTICAL PROPERTIES OF ELECTROSTATIC LENSES	
	4.1 Image Formation	48
	4.2 The Gaussian Approximation	57
	4.3 Optical Formalism	64
	4.4 Relativistic Lenses	73
	4.5 Practical Determination of Electron Trajectories	74
	4.6 Experimental Determination of the Standard Cardinal Elements	82
5.	The Optical Properties of Magnetic Lenses	
	5.1 The Form of the Trajectories in an Axially Symmetric Field	86
	5.2 The Gaussian Approximation	89
	5.3 Properties of Magnetic Lenses	93
	5.4 Relativistic Lenses	95
	5.5 Methods of Determining the Fundamental Rays	96
	5.6 Calculation of the Trajectories and Optical Elements	98
6.	Similarities and Differences between Glass Optics and Electron Optics	
	6.1 Electrostatic Lenses	102
	6.2 Magnetic Lenses	107
7.	Lens Defects	
	7.1 The Limits of the Gaussian Approximation	112
	7.2 Third Order Aberrations	113
	7.3 Calculation of the Aberration Coefficients	121

	7.4 Chromatic Aberration	133
	7.5 Mechanical Defects	139
	7.6 Measurement of the Aberration Coefficients, and their Orders of Magnitude	142
	7.7 Correction of the Aberrations	155
8.	Some Electrostatic Lenses and Triode Guns	
	8.1 Two Coaxial Cylinders	164
	8.2 Lenses formed from three Diaphragms	168
	8.3 "Mesh" or "Grid" Lenses	179
	8.4 The Immersion Objective	183
	8.5 The Triode Electron Gun	194
9.	Magnetic Lens Models	
	9.1 The Long Solenoid	213
	9.2 Models Representing Short Systems	214
	9.3 The Unshielded Short Coil	222
	9.4 Shielded Coils	224
10.	Strong Focusing Lenses	
	10.1 The Strong Focusing Principle	233
	10.2 The Field Distribution	237
	10.3 The First Order Optical Properties	242
	10.4 Combinations of Lenses	247
	10.5 A Chain of N Identical Crossed Quadrupole Lenses	251
	10.6 Applications of Quadrupole Lenses	256
	10.7 The Aberrations of Quadrupole Lenses	257

PART II. CATHODE RAY TUBES, MICROSCOPES, IMAGE-CONVERTERS, DIFFRACTION DEVICES, MASS AND β -RAY SPECTROGRAPHS

11.	ELECTR	ON OPTICAL INSTRUMENTS	
	11.1	Light Radiation and Corpuscular Radiation; the Simple Character	
		of Photons	261
	11.2	Mass and Velocity Spectrographs; Diffraction Devices	261
	11.3	Cathode Ray Tubes; Oscillographs	262
	11.4	Microscopes	263
	11.5	Telescopes and Image-converters	264
12.	ТНЕ С	athode Ray Tube	
	12.1	Historical Introduction; the Importance of the Cathode Ray Tube	266
	12.2	Formation of the Spot	269
	12.3	Deflection of the Beam	293
	12.4	The Post-acceleration	309
13.	Тне Ем	MISSION MICROSCOPE	
	13.1	Introduction	313
	13.2	Optical Properties	313
	13.3	The Various Types of Microscopes	320
	13.4	Some Actual Instruments	338

	CONTENTS	vii
	13.5 The Filament Microscope and the Spherical (or Point-projection) Microscope	346
	13.6 The Point-projection Microscope	349
14.	The Image-converter and the Image-intensifier	
	14.1 The Basic Principle	360
	14.2 The Main Types of Instrument	360
	14.3 Principal Characteristics	369
	14.4 The Development and the Future of these Instruments	375
	14.5 Amplification of the Brilliance of Radioscopic Images	382
15.	THE ELECTRON MICROSCOPE; STRUCTURE AND SPECIAL FEATURES	
	15.1 The Notions of Resolving Power and Useful Magnification	384
	15.2 A Comparison of the Electron and the Optical Microscopes	386
	15.3 The General Properties of the Instrument	389
	15.4 Examining and Recording the Image	395
	15.5 The importance of the Projective Lens	403
	13.6 Measurement of the Characteristics of a Microscope	408
16.	The Factors which Govern the Resolving Power in Electron Microscopy	
	16.1 The Final Resolving Power; Diffraction Alone	415
	16.2 The Optimum Resolving Power; Diffraction and Spherical Aberration	417
	16.3 The Resolving Power in Practice; the Influence of the Chromatic	
	Aberration	422
	16.4 The Practical Resolving Power; the Influence of Defects in the	
	Mechanical Construction	427
	16.5 "Revolutionary" Attempts to Improve the Resolving Power	439
	16.6 Conclusion	443
17.	The Optical Elements of a Microscope	
	17.1 The Object Illumination	445
	17.2 General Characteristics of Microscope Lenses	455
	17.3 Electrostatic Lenses	455
	17.4 Magnetic Lenses	461
18.	The Ancillary Parts of an Electron Microscope	
	18.1 The Electrical Supply	477
	18.2 High Tension Effects	484
	18.3 The Vacuum	494
	18.4 The General Appearance of a Microscope	496
	18.5 The Optical Adjustment of the Instrument	507
19.	The Action of the Object in a Microscope on the Electron Beam; Contrast in the Image; Velocity Analysers	
	19.1 The Two Effects to which Electrons may be Subjected on Passing	
	through a Thin Film	512
	19.2 Contrast Formation in an Amorphous Object	522
	19.3 Velocity Analysers	548
	19.4 Velocity Filters	559
20.	Specimen Preparation	
	20.1 The Problem of Preparation	565
	20.2 Supporting the Object	566

20.3 Direct Observation of the Object20.4 Indirect Observation of the Object20.5 The Increase in the Temperature of the Object, and the Disturbance of the Latter by the Impact of the Electron Beam	571 579 586
21 THE DIFFRACTION CAMERA	
21.1 Electron Diffraction	500
21.2 The Properties of a Diffraction Camera	505
21.3 Some Practical Examples	605
21.4 Some Applications	621
22 FLECTRON PROBE DEVICES	
22.1 Electron Probes and Micro-probes	623
22.2 Micro-probe Analysers	623
22.3 The Scanning Electron Microscope	633
22.4 The X-ray Projection Microscope	637
22.5 Machining by Electron Bombardment	646
23. The Electron (Ion) Prism	
23.1 The History of the Mass Spectroscope	657
23.2 The Principle of Mass Spectroscopy; the Spectrograph and the	
Spectrometer	658
23.3 Elementary Examples of Analysing Fields: Uniform Fields	660
23.4 Ion Optics in Fields with a Symmetry Plane	664
23.5 Sector Fields; Mass and Energy Dispersion; Double Focusing;	009
Spectrographs	674
23.7 The Various Perturbing Effects	679
23.8 The Resolving Power of Spectrometers and Spectrographs	683
24. The Individual Parts of a Mass Spectroscope	
24.1 The Ion Source	686
24.2 Collection of the Ions	698
24.3 The Electrical Circuitry of a Spectroscope	699
24.4 The Vacuum and the Gas Circulation	704
24.5 The Various Types of Measurement in Mass Spectroscopy	707
24.6 An Overall view of Present-day Instruments, and the Fields in which	712
24.7 Mass Spectroscopes with a High Frequency Field	719
	/1/
25. p-RAY SPECTROGRAPHS WITH ELECTRON LENSES	
25.1 Introduction	723
25.2 The General Principle	724
25.3 Energy Selection by an Aperture 25.4 Clasity the Size of the Instrument and the Radius of the Source	723
25.4 Clarity, the Size of the Instrument, and the Radius of the Source	720
25.5 The Annual Selective Diaphragin (whener) 25.6 Modern Trends	740
Table 1 Some Liseful Constants	742
Table 2 Some Useful Formiliae	743
Table 3 FUNDAMENTAL CHARACTERISTICS OF FREE ELECTRONS IN MOTION	744
Table 4 The Legendre Functions of Fractional Order	747
BIBLIOGRAPHY	749
	777
