

Contents

Introduction	ix
Chapter 1: The Optics of Simple Lenses	1
1.1 Analogies between particle and photon optics	1
1.2 The cardinal points of a lens	4
1.2.1 The construction of an image	5
1.2.2 The general ray	7
1.2.3 The nodal points	9
1.3 Matrix representation of lens parameters	10
Chapter 2: The Motion of Charged Particles in an Electrostatic Field	13
2.1 The equation of paraxial motion	13
2.2 Some general results	15
2.2.1 The nodal and principal points	17
2.2.2 Relativistic effects	18
Chapter 3: The Determination of the Axial Potential	20
3.1 The functions Φ and Ψ	20
3.2 Mathematical approximations	21
3.3 The finite difference method: relaxation	22
3.3.1 A two-dimensional example	23
3.3.2 Cylindrical symmetry	27
3.3.3 Precision and accuracy	31
3.3.4 The SIMION program	33
3.4 Bessel function expansions	35
3.4.1 The variational principle	38
3.5 The charge density method	40
Chapter 4: The Optics of Simple Lens Systems	44
4.1 Aperture lenses	44
4.1.1 Three-aperture lenses	45
4.2 Cylinder lenses	47
4.3 The calculation of ray paths	48
4.3.1 Ray tracing in a known potential	48
4.3.2 Integration of the Picht equation	52

4.4 Real and asymptotic cardinal points	54
4.4.1 The determination of the cardinal points by ray tracing	55
4.5 Windows and pupils	55
4.5.1 The energy-add lens	57
4.6 Multi-element lenses	57
4.6.1 Zoom lenses	57
4.6.2 The afocal lens	59
4.6.3 The zoom afocal lens	61
Chapter 5: Aberrations	64
5.1 Spherical aberration coefficients	64
5.1.1 The axial displacement	66
5.1.2 The disc of minimum confusion	67
5.2 Off-axis aberrations	68
5.3 The calculation of aberration coefficients	69
5.3.1 Direct ray tracing	69
5.3.2 Perturbation of the paraxial solution	72
5.4 Interrelations of the aberration coefficients	76
5.4.1 The principal surfaces	78
5.4.2 The aberrations of retarding lenses	79
5.4.3 Figures of merit	80
Chapter 6: The LENSYS Program	83
6.1 The programs on the disc	83
6.1.1 Loading and running the programs	83
6.2 The screen display	84
6.2.1 The menu system	84
6.3 The Lens Data option	85
6.3.1 Error conditions	86
6.4 The Imaging option	86
6.4.1 Automatic and manual adjustments	86
6.4.2 Aperture lenses	88
6.4.3 Cylinder lenses	88
6.4.4 The Afocal and Varimag lenses	89
6.5 The print option	91
Appendix: Technical Aspects of LENSYS	93
A.1 The programming language	93
A.2 Initialisation	93
A.2.1 The effect of processor type on the speed of the program	93
A.3 Calculation of potentials	94
A.3.1 Aperture lenses	94
A.3.2 Cylinder lenses	94
A.4 Ray tracing for focal data	97
A.4.1 Accuracy and consistency	98

A.5 Solving the imaging problem	98
A.5.1 The Afocal lens	99
A.5.2 The Varimag lens	99
