<b>Historical Introduction . . . . .</b>	<b>1</b>
<b>I Ideal or Gaussian Images . . . . .</b>	<b>16</b>
A. Electron Scattering . . . . .	20
B. Image Contrast with Amorphous Objects . . . . .	29
C. Scattering Patterns from Quasi-amorphous Objects . . . . .	36
D. General Remarks . . . . .	47
<b>II Numerical Values of Scattering Cross Sections . . . . .</b>	<b>52</b>
A. Elastic Isolated Atom Cross Sections . . . . .	53
B. Inelastic Isolated Atom Cross Sections . . . . .	61
<b>III Fine Structure Exceeding 10 Å in Size . . . . .</b>	<b>66</b>
A. Replication . . . . .	71
B. Particles, Filaments, and Molecules . . . . .	85
<b>IV Introduction to Waves and Interference . . . . .</b>	<b>93</b>
A. Elementary Wave Motion . . . . .	93
B. Interference and Coherence . . . . .	97
C. Diffraction by Obstacles . . . . .	105
<b>V Wave Mechanics and Image Formation . . . . .</b>	<b>117</b>
A. Motion in Field Free Space . . . . .	120
B. Motion in Two Regions . . . . .	123
C. Transmission through a Potential Film . . . . .	127
D. Electron Interference Microscopes . . . . .	129
E. Abbé's Diffraction Principle of Image Formation . . . . .	136
F. Vector and Imaginary Potentials . . . . .	142
<b>VI Collective Excitations and Energy Loss in Solids . . . . .</b>	<b>149</b>
A. Plasma Excitation . . . . .	150
B. Core Electron Excitation . . . . .	157
C. Energy Selecting Electron Microscopes . . . . .	161
D. Specimen Temperature Rise and Damage . . . . .	165

<b>VII</b>	<b>Introduction to Electron Diffraction</b>	. . . . .	174
A.	Elementary Interpretation	. . . . .	178
B.	Direct Lattices and Crystals	. . . . .	194
C.	Structure Factors and Fourier Potential	. . . . .	199
D.	Reciprocal Lattice and Ewald Construction	. . . . .	203
<b>VIII</b>	<b>Intensity of Diffraction</b>	. . . . .	206
A.	Kinematic Diffraction	. . . . .	212
B.	Two-Beam Dynamical Theory	. . . . .	224
C.	Thermal Scattering	. . . . .	241
<b>IX</b>	<b>Diffraction Contrast</b>	. . . . .	254
A.	"Perfect Crystals"	. . . . .	255
B.	Lattice Irregularities and Defects	. . . . .	261
B.1	<i>Phase Shift or Fault Plane</i>	. . . . .	264
B.2	<i>Strain Displacement Fields</i>	. . . . .	272
B.3	<i>Dislocations</i>	. . . . .	282
C.	Multiply Periodic Structures	. . . . .	294
<b>X</b>	<b>Image Quality and Resolution</b>	. . . . .	304
A.	Effect of Source	. . . . .	310
B.	Lens Aberrations	. . . . .	314
C.	Diffuse Scattering	. . . . .	321
D.	Fourier Resolution	. . . . .	324
<b>XI</b>	<b>Images of Deflecting Fields</b>	. . . . .	332
A.	Magnetic Field Distributions	. . . . .	332
B.	Electrostatic Deflections	. . . . .	344
<b>XII</b>	<b>Electron Probe Analysis</b>	. . . . .	349
<b>Appendix</b>			
A.	Common Functions in Interference Calculations	. . . . .	354
B.	Lens Aberrations and Defocusing Phase	. . . . .	357
C.	Useful Crystallographic Data	. . . . .	362
	<i>Table C-1 Angles between Planes in the Cubic System</i>	. . . . .	366
	<i>Table C-2 Crystal Structures of Solid Elements</i>	. . . . .	367
	<i>Table C-3 Mean Inner Potential of Various Substances</i>	. . . . .	371
D.	Dynamical Three-Beam Example	. . . . .	372
E.	Determination of Burgers Vectors	. . . . .	376
F.	Diffraction Effects with Thick Crystals	. . . . .	379
G.	Preferred Orientation	. . . . .	385
T.	Tables	. . . . .	391
	<i>Table T-1 Commonly Used Physical Constants</i>	. . . . .	392
	<i>Table T-2 Kinetic Energy, Velocity, Wavelength Table</i>	. . . . .	393
	<i>Table T-3 Electron Scattering Amplitudes</i>	. . . . .	395
	<i>Table T-4 Electron Scattering Amplitudes</i>	. . . . .	397
Index	.	.	401
