Preface xi

Acknowledgments xv

1 / Introduction: Terminology and Motivation 1

2 / Discrete-Time Signals and Systems 3

    2.0 Introduction 3

    2.1 Discrete-Time Signals, or Sequences 3

    2.2 Discrete-Time Systems and Filters 6

    2.3 Stability and Causality 14

        Problems 15

3 / The  $z$  Transform 19

    3.0 Introduction 19

    3.1 Definition of the  $z$  Transform 19

    3.2 Inverse  $z$  Transform 26

    3.3 Inverse  $z$  Transform for Causal Sequences 28

    3.4 Properties of the  $z$  Transform 33

        Problems 36

4 / Input/Output Relationships 39

    4.0 Introduction 39

    4.1 System Function and Frequency Response 39

    4.2 Difference Equations 43

    4.3 Geometric Evaluations of  $H(z)$  and  $H'(\omega)$  47

    4.4 State Variables 54

        Problems 65

<b>5 / Discrete-Time Networks</b>	<b>71</b>
5.0 Introduction	71
5.1 Flow Graph Properties	71
5.2 Network Structures	76
5.3 Properties of Network Coefficients	83
5.4 Special Discrete-Time Networks	93
Problems	98
<b>6 / Sampling Continuous-Time Signals</b>	<b>105</b>
6.0 Introduction	105
6.1 Fourier Transform Relationships	106
6.2 Discrete-Time Fourier Transform	110
6.3 Laplace Transform Relationships	118
6.4 Prefilters, Postfilters and D/A Converters	121
Problems	127
<b>7 / Discrete Fourier Transform</b>	<b>133</b>
7.0 Introduction	133
7.1 Derivation and Properties of the DFT	133
7.2 Zero Padding	138
7.3 Windows in Spectrum Analysis	145
7.4 FFT Algorithms	153
7.5 Prime-Factor FFT's	167
7.6 Periodogram	176
Problems	182
<b>8 / IIR Filter Design by Transformation</b>	<b>187</b>
8.0 Introduction	187
8.1 Classical Filter Designs	188
8.2 Impulse-Invariant Transformation	198
8.3 Bilinear Transformation	201
8.4 Spectral Transformation	212
Problems	219
<b>9 / FIR Filter Design Techniques</b>	<b>223</b>
9.0 Introduction	223
9.1 Window-Function Technique	224
9.2 Frequency-Sampling Technique	234
9.3 Equiripple Designs	240
Problems	246

<b>10 / Filter Design by Modeling</b>	<b>249</b>
10.0 Introduction	249
10.1 Autoregressive (all-pole) Filters	252
10.2 Moving-Average (all-zero) Filters	267
10.3 ARMA (pole/zero) Filters	271
10.4 Lattice Structures	281
10.5 Spectrum Analysis by Modeling	287
Problems	294
<b>11 / Quantization Effects</b>	<b>297</b>
11.0 Introduction	297
11.1 Coefficient Quantization	298
11.2 Signal Quantization	305
11.3 Dynamic Range and Scaling	309
11.4 Parallel and Cascade Forms	316
11.5 Limit-Cycle Oscillations	327
11.6 State-Space Structures	332
Problems	340
<b>12 / Digital Filter Implementation</b>	<b>343</b>
12.0 Introduction	343
12.1 Bit-Serial Arithmetic and VLSI	343
12.2 Distributed Arithmetic	352
12.3 Block IIR Implementations	355
Problems	362
<b>13 / Filter and Systems Examples</b>	<b>365</b>
13.0 Introduction	365
13.1 Interpolation and Decimation	365
13.2 Hilbert Transformation	374
13.3 Digital Oscillators and Synthesizers	376
13.4 Speech Synthesis	380
13.5 Cepstrum	385
Problems	394
<b>Answers to Selected Problems</b>	<b>397</b>
<b>References</b>	<b>401</b>
<b>Index</b>	<b>407</b>
