## CONTENTS

Foreword	vii
HIGH-POWER MICROWAVE ELECTRONICS	
INTRODUCTION	3
CHAPTER I. The solution of the basic equation of motion of charged particles by the time-averaging method	8
CHAPTER II. The motion of electrons in the planotron	18
CHAPTER III. The basic characteristics of the planotron	29
CHAPTER IV. Anodic and cathodic losses in the planotron	42
CHAPTER V. The end effect and losses that are connected with it	51
CHAPTER VI. The theory of the magnetron	64
CHAPTER VII. Experimental investigation of electronic processes in the planotron	82
CHAPTER VIII. The Larmor orbit in a high-frequency field	92
CHAPTER IX. The prospects for the future development of high-power electronics	106
CHARACTERISTIC OSCILLATIONS OF GRIDDED CAVITY RESONATORS	
Introduction	117
CHAPTER X. The rectangular cavity	119
CHAPTER XI. The calculation of the capacity $\chi$	129
CHAPTER XII. Characteristic oscillations of a gridded cylindric cavity	135
CHAPTER XIII. Gridded cavity resonators	142
INDEX	147
