PREFACE	xi
LIST OF SYMBOLS	xxv
CHAPTER I. THE GENERAL DYNAMICS OF SPACE-CHARGE FLOW	1
1. INTRODUCTION	1
1.1. The Space-charge-flow Problem	1
1.2. The Contents of the Chapter	2
2. THE BASIC EQUATIONS	3
2.1. Introduction	3
2.2. The Electromagnetic Field Equations	4
2.3. The Lorentz Force Law	5
2.4. The Hydrodynamic Equations	8
3. SOME INVARIANTS OF THE FLOW	12
3.1. Introduction	12
3.2. The Lagrange Invariant, Poincaré Invariant, and Busch's Theorem	12
3.3. Liouville's Theorem	17
4. CYCLOTRON FREQUENCY AND LARMOR FREQUENCY	20
5. THE CLASSIFICATION OF ELECTRON BEAMS	23
5.1. Introduction	23
5.2. Congruent and Noncongruent Flow	24
5.3. The Equations of the Space-charge Field for Congruent Flow	28
5.4. The Equations of the Space-charge Field for Noncongruent Flow	29
6. BOUNDARY CONDITIONS AT AN EMITTER	30

7. SCALING LAWS	32
7.1. Introduction	32
7.2. General Scaling	32
7.3. Transverse Scaling	38
	45
CHAPTER II. EXACT SPACE-CHARGE-FLOW SOLUTIONS .	45
1. INTRODUCTION	45
2. ONE-DIMENSIONAL SPACE-CHARGE-FLOW SOLUTIONS	46
2.1. Introduction	46
2.2. Rectilinear Flow in a Planar Diode	47
2.3. Space-charge Flow in Crossed Electric and Magnetic Fields	51
2.4. Solutions with a Component of Magnetic Field Normal to the Cathode	57
3. ORTHOGONAL CURVILINEAR COORDINATE SYSTEMS BASED ON THE STREAMLINES OF THE FLOW	60
3.1. Introduction	60
3.2. Normal Congruent Flow	61
3.3. A Solution in Cylindrical Polar Coordinates	67
4. THE USE OF THE SEPARATION OF VARIABLES WITH THE ACTION FUNCTION	69
4.1. Introduction	69
4.2. Normal Congruent Flow with the Separation in Additive Form	70
4.3. Normal Congruent Flow with the Separation in Product Form.	72
4.4. Skew-congruent Flow	81
5. THE SEPARATION OF VARIABLES AND THE LORENTZ FORCE LAW	84
5.1. Introduction.	84
5.2. The Hydrodynamic Equation of Motion.	85
5.3. Numerical Methods and the Direct Application of the Lorentz Equation of Motion.	89
CHAPTER III. PARAXIAL-RAY EQUATIONS	97
1. INTRODUCTION.	97
2. PARAXIAL EQUATION FOR THE BOUNDING SURFACE OF A ROUND SOLID BEAM WITH A RECTILINEAR AXIS	99
2.1. Mathematical Preliminaries	99

2.2. Detailed Derivation of the Paraxial Equation	101
2.3. Discussion of Paraxial Forces	104
2.4. Assumptions Inherent in Paraxial Theory	105
3. PARAXIAL EQUATION FOR THE BOUNDING SURFACE OF SHEET BEAMS	106
4. THE LAMINAR-BEAM MODEL	107
5. THE PARAXIAL EQUATIONS INSIDE A SOLID AXIALLY SYMMETRIC BEAM.	109
5.1. Introduction	109
5.2. Derivation of the Equations.	109
5.3. The Matrix Formulation	111
5.4. An Illustrative Example	113
6. CURVILINEAR SHEET BEAMS.	114
6.1. Introduction	114
6.2. Establishment of the Metric	114
6.3. Légrange's Equation for r	116
6.4. Discussion of the Paraxial-ray Equation	119
6.5. The Paraxial Equations Inside a Curvilinear Sheet Beam	121
7. ANNULAR BEAMS	122
7.1. Space-charge Fields in a Cylindrical System	122
7.2. Paraxial-ray Equations for Annular Beams	122
8. PHYSICAL ACTION OF A LENS.	123
8.1. Phenomenological Description	123
8.2. Paraxial-ray Analysis of a Lens.	124
8.3. The Thin Lens	129
8.4. The Aperture Lens	130
9. THE USE OF PARAXIAL THEORY FOR ELECTRON- GUN DESIGN	131
10. SPREADING OF A DRIFTING BEAM	138
CHAPTER IV. UNIFORM FOCUSING	145
1. INTRODUCTION.	145
2. GENERAL TREATMENT OF UNRIPPLED ROUND BEAMS	146
2.1. Some Relations Pertaining to the Beam Remote from the Cathode	146
2.2. Relation of the Beam to the Cathode	148
3. UNRIPPLED ISOAXIAL-VELOCITY ROUND BEAMS	151
3.1. Classification of Beams	151

3.2. The Brillouin Solid Beam	153
3.3. The Brillouin Hollow Beam.	157
3.4. Harris Flow.	160
4. PARAXIAL ANALYSIS OF ROUND BEAMS	163
4.1. Uniform Magnetic Focusing; Equilibrium Radii	163
4.2. First Integral of the Paraxial Equation; Beam Stiffness	165
4.3. Second Integral of the Paraxial Equation; Resonant Frequency and Wavelength	167
4.4. Application to a Brillouin Hollow Beam	169
4.5. Harris Flow.	170
5. ISOROTATIONAL BEAMS; UNRIPPLED THEORY	172
6. PERTURBATIONS IN THIN CROSSED-FIELD ANNULAR BEAMS	175
6.1. Paraxial Theory	175
6.2. Stability	176
7. UNRIPPLED RECTILINEAR SHEET BEAMS	180
7.1. General Development.	180
7.2. Brillouin Flow	181
7.3. Rectilinear Crossed-field Flow	183
8. RIPPLING IN SHEET BEAMS	184
8.1. Introduction	184
8.2. Rippling in a Brillouin Sheet Beam.	185
8.3. Rippling in a Crossed-field Sheet Beam	186
9. MAGNETIC-FIELD PERTURBATIONS.	186
9.1. General Discussion.	186
9.2. Rippling Caused by a Field Reversal.	188
9.3. Beam Rotation Caused by a Field Reversal; Magnetic Mirrors	192
9.4. Adiabatic Tapering of the Magnetic Field	194
9.5. Transverse Fields	196
CHAPTER V. PERIODIC FOCUSING	200
1. INTRODUCTION	200
2. PERIODIC PERMANENT MAGNET (PPM) FOCUSING OF ROUND UNIPOTENTIAL BEAMS	204
2.1. Introduction	204
2.2. Stability of a Beam with Negligible Space Charge	209
2.3. Focusing with Space Charge	212
2.4. Hollow Beams and Beams with a Radial Variation of Density	218
2.5. Tapering of a Periodic Magnetic Field.	223

3. PERIODIC ELECTROSTATIC FOCUSING OF BEAMS WITH A RECTILINEAR AXIS	225
3.1. Introduction	225
3.2. Space-charge Balance Conditions for a Sheet Beam . .	229
3.3. Effect of Improper Entrance Conditions on the Beam Focusing	231
3.4. An Example of Strip-beam Focusing	234
3.5. Electrostatic Focusing of a Thick Beam	237
3.6. Asymmetrical Sheet-beam Focusing	240
3.7. Space-charge Balance Conditions for a Round Beam .	242
3.8. The Effect of Improper Entrance Conditions on the Focusing of a Round Beam	243
3.9. The Consequences of Nonlaminarity	244
3.10. An Example of the Electrostatic Focusing of a Cylindrical Beam	245
3.11. Periodic Electrostatic Focusing of a Thick Round Beam or a Hollow Beam	247
3.12. The Bifilar Helix	249
4. PERIODIC DEFLECTION FOCUSING	252
4.1. Introduction	252
4.2. General Formulation for the Electrostatic Focusing of a Strip Beam Uniform in the z Direction	254
4.3. Slalom Focusing	256
 CHAPTER VI. THERMAL EFFECTS AND NONLAMINAR FLOW	 263
1. INTRODUCTION	263
(2.) THE PLANAR DIODE	265
2.1. Introduction	265
2.2. The Boundary Conditions at the Cathode	265
2.3. The Mathematical Formalism	268
2.4. The Solutions of the Equations for the Potential in Normalized Forms	271
2.5. The Calculation of the Position and Effect of the Potential Minimum	275
3. PARAXIAL OPTICS FOR THERMAL BEAMS	276
3.1. Introduction	276
3.2. The Imaging Properties of Thermal Beams	277
3.3. The Trajectories of Thermal Electrons	280
4. THE CURRENT DENSITY AT THE AXIS OF AN ELECTRON BEAM	282
4.1. Introduction	282

4.2. Langmuir's Bounding Expression for the Current Density on the Axis of a Cylindrical System	283
4.3. The Current Density of the Axis of a Perfect Cylindrical Focusing System	285
5. THE CURRENT DENSITY AT ANY POINT IN A CYLINDRICAL BEAM	289
5.1. Introduction	289
5.2. The Basic Integration to Find Current Densities	290
5.3. The Density Variation for $r_e/\sigma \gg 1$	296
6. SOME APPLICATIONS OF THE CYLINDRICAL-BEAM FORMULAS	298
6.1. Introduction	298
6.2. The Properties of a Cylindrical Beam Emitted from a Shielded Gun	299
6.3. The Properties of a Thermally Diffused Cylindrical Beam in a Planar Diode	305
6.4. The Properties of a Thermally Diffused Cylindrical Beam in a Brillouin Focusing System	308
6.5. A Linear Treatment of the Thermal Spread in a Round Drifting Beam	310
7. THE CURRENT DENSITY AT ANY POINT IN A SHEET BEAM	311
7.1. Introduction	311
7.2. The Basic Integration to Compute Final Current Densities	312
7.3. A Linear Treatment of the Current Density in a Drifting Sheet Beam	316
8. THE MODIFICATION OF THE THERMAL-SPREAD FORMULAS DUE TO THE CHANGE IN SPACE-CHARGE FORCES	318
8.1. Introduction	318
8.2. The Modification in a Paraxial Beam	318
8.3. Application of the Method of Sec. 8.2. to a Drifting Sheet Beam	320
8.4. An Alternative Analysis of the Current Density in a Thermally Diffused Drifting Beam	322
8.5. The Spherical Diode	323
CHAPTER VII. ANALYTICAL METHODS OF ELECTRODE DESIGN	331
1. INTRODUCTION	331
2. SOME SIMPLE SOLUTIONS OF TWO-DIMENSIONAL BOUNDARY-VALUE PROBLEMS	334

2.1. Introduction	334
2.2. Solution under Different Boundary Conditions	336
2.3. The Instability of Solutions under Cauchy Conditions and the Stability under Dirichlet Conditions	338
2.4. The Stability of Solutions of Hyperbolic Equations under Cauchy Conditions	340
3. THE SOLUTION OF THE TWO-DIMENSIONAL EXTERIOR-BOUNDARY-VALUE PROBLEM	341
3.1. Introduction	341
3.2. Electrodes to Maintain a Parallel Beam	342
3.3. Extension to an Arbitrary Potential and Field on a Line	343
3.4. Extension to an Arbitrary Potential and Field Defined on an Arbitrary Curve	345
3.5. Application to a Simple Problem of a Crossed-field Gun	346
3.6. A More Complicated Application to Crossed-field Guns	348
3.7. The Beam-forming Electrodes near a Curvilinear Strip Beam	351
3.8. Summary of the Potentialities of the Method and Its Pitfalls	355
4. EXTERIOR-BOUNDARY-VALUE PROBLEMS FOR AXIALLY SYMMETRIC AND PLANAR SYSTEMS	356
4.1. Introduction	356
4.2. Electrodes for Axially Symmetric Pencil Beams	357
4.3. The Mathematical Formalism	361
5. SOLUTION OF THE AXIALLY SYMMETRIC PROBLEM BY EMBEDDING IT IN A THIRD DIMENSION	364
5.1. Introduction	364
5.2. The Potentials Required to Maintain a Rectilinear Sheet Beam	365
5.3. Extension of the Method to the Case of Arbitrary Potentials and Fields Prescribed, for Axially Symmetric Beams, on a Prescribed Curve	368
CHAPTER VIII. APPROXIMATE THEORETICAL METHODS OF ELECTRODE DESIGN	377
1. INTRODUCTION	377
2. ANALYSIS OF A STEADY-ELECTRON-FLOW PROBLEM, NEGLECTING SPACE-CHARGE FORCES	379
2.1. Introduction	379

2.2. The Flow, Neglecting Space-charge Forces	379
2.3. Boundary Conditions at the Emitting Surface	381
3. THE ANALYSIS OF AN ELECTRODE SYSTEM, USING SPACE-CHARGE SIMULATION	382
3.1. Introduction	382
3.2. The Iteration Procedure	383
3.3. Convergence and Rate of Convergence	386
3.4. Uniqueness of the Iterative Solutions	389
3.5. Accuracy of the Method	393
3.6. Errors Due to the Discrete Nature of the Space-charge Simulation.	395
3.7. Errors Due to Mesh Size in the Difference Analog for the Potential	395
4. ANALYSIS AND SYNTHESIS OF ELECTRODE SYSTEMS BY THE SUPERPOSITION PRINCIPLE	399
4.1. Introduction	399
4.2. The Determination of One Electrode System from Another to Produce the Same Beam	401
4.3. The Analytic Determination of the Space-charge Potential	403
5. THE ANODE-HOLE PROBLEM	407
5.1. Introduction	407
5.2. The Determination of the Effect of the Anode Hole with Space-charge-simulation Equipment	409
5.3. The Effect of the Anode Hole in Very Low Perveance Guns	409
5.4. The Use of a Dummy Cathode to Determine Effects in Medium-perveance Guns	410
5.5. The Use of the Superposition Method in Medium-perveance Guns	412
5.6. The Compensation for the Deteriorating Effect of the Anode Hole	413
6. ELECTRODE ANALYSIS FOR PARAXIAL BEAMS	415
6.1. General Simplifications in the Methods Due to the Paraxial Assumptions	415
6.2. Simplifications Due to the Form of the Potential	417
7. AN EVALUATION OF THE METHODS OF ANALYZING ELECTRODE CONFIGURATIONS	419

CHAPTER IX. ANALOGS USED FOR ELECTRODE DESIGN	423
1. INTRODUCTION	423
1.1. Background	423
1.2. The Plan of the Chapter	424
2. EQUATIONS OBEYED BY THE POTENTIAL FOR STEADY FLOW IN VACUUM AND ITS ANALOGS	424
2.1. Introduction	424
2.2. The Equations for Steady Planar or Axially Symmetric Flow	425
2.3. The Equations for Steady Current Flow in an Electrolyte	426
2.4. The Difference-equation Approximation	426
2.5. Scaling	430
3. RELAXATION TECHNIQUES	430
3.1. Introduction	430
3.2. The Relaxation Method for Two-dimensional Systems	431
3.3. Overrelaxation	433
3.4. The Effect of Mesh Size	433
3.5. The Relaxation Technique in Axially Symmetric Systems	436
4. THE RESISTANCE-NETWORK ANALOG.	436
4.1. Introduction	436
4.2. The Equation for the Resistance Network	437
4.3. The Analog of the Axially Symmetric Poisson's Equation.	437
4.4. The Simulation of Boundary Conditions	439
4.5. Termination of the Network	441
4.6. Description of the Network	443
4.7. Accuracy of the Resistance Network.	444
5. RESISTANCE-PAPER ANALOG	445
5.1. Introduction	445
6. CHARACTERISTICS OF ELECTROLYTIC TANKS	445
6.1. Introduction	445
6.2. Physical Description	446
6.3. Tanks with Solid Electrolytes	450
6.4. The Simulation of Space Charge by Current Sources	451
7. THE RUBBER-MEMBRANE ANALOG	454
7.1. Description of the Analog.	454
8. AN EVALUATION OF THE METHODS OF SOLVING POISSON'S EQUATION	456

9. FIELD AND TRAJECTORY PLOTTING	457
9.1. Introduction	457
9.2. Field Plots in an Electrolytic Tank or Resistance Network	458
9.3. The Basic Equations for Ray Tracing	461
9.4. Ray Tracing by Graphical Means.	463
9.5. Plotting Trajectories by Integrating the Lorentz Force Law	465
9.6. Automatic Trajectory Tracing with a Computer. . . .	467
 APPENDIX A. THE VECTOR OPERATORS IN ORTHOG- ONAL CURVILINEAR COORDINATES	471
1. INTRODUCTION	471
2. THE EXPRESSIONS FOR THE VECTOR OPERATORS IN A GENERAL ORTHOGONAL COORDINATE SYSTEM	471
3. THE VECTOR OPERATORS IN SOME SPECIAL COORDINATE SYSTEMS	475
 APPENDIX B. CONFORMAL TRANSFORMATIONS AND THE PRINCIPLE OF ANALYTIC CONTINUATION.	478
1. INTRODUCTION.	478
2. THE PROPERTIES OF CONFORMAL TRANSFORMA- TIONS	478
3. THE PRINCIPLE OF ANALYTIC CONTINUATION	480
 APPENDIX C. MATRIX THEORY FOR PERIODIC SYSTEMS	482
 APPENDIX D. HILL'S AND MATHIEU'S EQUATIONS	485
 APPENDIX E. THE SPHERICAL AND CYLINDRICAL DIODES	490
 Index	497
 Physical Constants in MKS Units	inside front cover
