

# Contents

<b>1.</b>	<b>Introduction</b> . . . . .	<b>1</b>
<b>2.</b>	<b>Radiation Detectors and Related Circuits</b> . . . . .	<b>4</b>
2.1.	Ionization Chamber . . . . .	4
2.1.1.	Energy Required for the Generation of One Charge Carrier Pair . . . . .	5
2.1.2.	Mobility of the Charge Carriers . . . . .	6
2.1.3.	The Pulse Shape . . . . .	6
2.1.4.	Preamplifier Circuits . . . . .	11
2.2.	Proportional Counters . . . . .	14
2.2.1.	Detection Mechanism and Pulse Shape in the Proportional Counter . . . . .	14
2.2.2.	Statistics of the Multiplication Process . . . . .	16
2.2.3.	Preamplifier Circuits . . . . .	17
2.3.	Geiger-Müller-Counters . . . . .	20
2.3.1.	Detection Mechanism and Pulse Shape in the GM Counter . . . . .	20
2.3.2.	Quenching Circuits . . . . .	24
2.4.	Semiconductor Detectors . . . . .	27
2.4.1.	Characteristic Properties of Semiconductor Detectors . . . . .	27
2.4.2.	Energy Required to Form a Hole-Electron Pair . . . . .	31
2.4.3.	The Pulse Shape in the <i>pn</i> and <i>pin</i> Detectors . . . . .	34
2.4.4.	Preamplifiers and Related Circuits . . . . .	38
2.5.	Scintillation and Čerenkov Counters . . . . .	48
2.5.1.	Principle of a Scintillation Counter . . . . .	48
2.5.2.	The Pulse Shape . . . . .	51
2.5.3.	Photomultiplier Statistics and the Pulse Height . . . . .	55
2.5.4.	Thermal Noise . . . . .	56
2.5.5.	Signal Circuits Used in Scintillation Counters . . . . .	60
2.5.6.	Auxiliary Circuits . . . . .	66
2.5.7.	Scintillation Counter Stabilizer Circuits . . . . .	70
2.5.8.	Čerenkov Counter . . . . .	74

<b>3.</b>	<b>Analog Circuits . . . . .</b>	<b>75</b>
3.1.	Linear Pulse Amplifiers . . . . .	75
3.1.1.	General Considerations, Linearity . . . . .	76
3.1.2.	The Transient Response of an Amplifier . . . . .	84
3.1.3.	Pulse Shaping . . . . .	90
3.1.4.	Sum Effects . . . . .	106
3.1.5.	Overload Recovery . . . . .	111
3.1.6.	Practical Design Criteria . . . . .	114
3.1.7.	Amplifiers with Variable Gain . . . . .	115
3.2.	Arithmetic Operations on Analog Signals . . . . .	117
3.2.1.	Operational Amplifiers . . . . .	117
3.2.2.	Arithmetic Operations on Pulse Amplitudes . . . . .	120
3.2.3.	Practical Circuits . . . . .	122
3.3.	Window Amplifiers . . . . .	128
3.4.	Linear Gates . . . . .	131
3.5.	Pulse Stretchers . . . . .	137
3.6.	Fast Pulse Amplifiers . . . . .	142
<b>4.</b>	<b>Analog-to-Digital Converters . . . . .</b>	<b>151</b>
4.1.	Pulse Height Discriminators . . . . .	152
4.1.1.	The Principle of a Multivibrator . . . . .	152
4.1.2.	Integral Discriminators . . . . .	158
4.1.3.	Differential Discriminators . . . . .	169
4.1.4.	Multiple Arrays of Differential Discriminators . . . . .	177
4.1.5.	Conservation of the Time Information in a Discriminator . . . . .	179
4.1.6.	Fast Tunnel Diode Discriminators . . . . .	183
4.2.	Digital Encoding of the Pulse Height . . . . .	191
4.2.1.	Converters of the Wilkinson Type . . . . .	192
4.2.2.	Other Converter Systems . . . . .	201
4.3.	Pulse Shape Discriminators . . . . .	205
<b>5.</b>	<b>Evaluation of the Time Information . . . . .</b>	<b>213</b>
5.1.	General Considerations, Resolution . . . . .	213
5.2.	Pulse Shapers for Coincidence Circuits and Time-to-Digital Converters . . . . .	217
5.3.	Coincidence Circuits . . . . .	227
5.3.1.	Ideal Coincidence Stage . . . . .	227
5.3.2.	Practical Circuits . . . . .	231

5.3.3.	The Chronotron Principle . . . . .	240
5.4.	Digital Encoding of the Time Interval . . . . .	243
5.4.1.	Direct Digital Encoding . . . . .	244
5.4.2.	Principle of a Time-to-Pulse-Height Converter . . . . .	246
5.4.3.	Start-Stop Converter . . . . .	250
5.4.4.	Overlap Converter . . . . .	256
5.4.5.	The Vernier Principle . . . . .	261
5.5.	Auxiliary Circuits . . . . .	264
<b>6.</b>	<b>Digital Circuits . . . . .</b>	<b>268</b>
6.1.	Basic Digital Circuits . . . . .	269
6.1.1.	Fundamentals of Boolean Algebra, Gates . . . . .	269
6.1.2.	Circuitry of Different Logics . . . . .	278
6.1.3.	The Flip-Flop . . . . .	286
6.1.4.	Practical Flip-Flop Circuits . . . . .	290
6.1.5.	Tunnel Diode Circuits . . . . .	292
6.2.	Scalers and Registers . . . . .	296
6.2.1.	Shift Registers . . . . .	296
6.2.2.	Pulse Scalers . . . . .	299
6.3.	Logical and Arithmetical Digital Circuits . . . . .	308
6.4.	Memories . . . . .	316
6.5.	Data Output . . . . .	320
6.6.	Count Rate Meters . . . . .	324
<b>7.</b>	<b>Data Processing . . . . .</b>	<b>327</b>
7.1.	Simple Counting Systems . . . . .	327
7.2.	Multiscaler Arrays . . . . .	329
7.3.	Multichannel Analyzers . . . . .	332
7.4.	Multiparameter Analyzers . . . . .	336
7.5.	On-Line Computers . . . . .	342
<b>8.</b>	<b>Appendix . . . . .</b>	<b>347</b>
8.1.	Laplace Transform Calculus . . . . .	347
8.1.1.	Networks . . . . .	347
8.1.2.	Naive Operational Calculus . . . . .	350
8.1.3.	Laplace Transformation . . . . .	354
8.1.3.1.	Rules of the Laplace Transformation . . . . .	355

Contents

8.1.3.2.	Application of the Laplace Transformation in the Network Analysis. . . . .	357
8.1.3.3.	Inverse Transformation of Rational Functions $F(p)$ . . .	359
8.1.3.4.	Stability Considerations . . . . .	361
8.1.3.5.	Approximations . . . . .	361
8.2.	Noise . . . . .	364
8.2.1.	General Considerations, Concept of Equivalent Noise Charge . . . . .	364
8.2.2.	Noise Sources . . . . .	365
8.2.3.	The Noise of an Amplifier with the Transfer Function $G(p)$ . . . . .	366
8.2.4.	Noise in a Charge Sensitive Amplifier . . . . .	368
8.2.5.	Properties of Input Stages with Vacuum Tubes, Bipolar Transistors and FET . . . . .	370
8.2.6.	Noise and Resolution . . . . .	373
9.	<b>References</b> . . . . .	377
10.	<b>Subject Index</b> . . . . .	399
