

CONTENTS

Preface / v

Chapter 1. Electronic Properties of Semiconductors / 1

- 1.1 Introduction / 1
- 1.2 Crystal Structure / 1
- 1.3 Energy Levels / 2
- 1.4 Energy Bands / 5
- 1.5 Fermi Distribution, Band Gap Energy, Fermi Level / 8
- 1.6 Extrinsic Carrier Densities, Donors, Acceptors / 12
- 1.7 Mobility, Mean Free Time / 17
- 1.8 Carrier Currents, Diffusion, Conductivity / 21
- 1.9 Recombination, Trapping / 23
- 1.10 Transport Behavior of Excess Carriers / 27
- 1.11 High- and Very-High-Level Excess-Carrier Injection / 32
- 1.12 Applications of Carrier Transport / 34
- 1.13 Surface Recombination / 36
- Problems / 41
- References / 42

Chapter 2. The Field Equations / 43

- 2.1 Introduction / 43
- 2.2 Maxwell's Equations For Electric and Magnetic Fields / 43
- 2.3 Scalar and Vector Potentials / 45
- 2.4 Hall Effect / 46
- 2.5 Wave Equations in Semiconductors / 49
- 2.6 Short Dipole Antenna / 52
- 2.7 Electric and Magnetic Field Boundary Conditions / 56
- 2.8 Surface States and Surface Potential / 60
- Problems / 66
- References / 66

Chapter 3. P – N Junction Devices / 68

- 3.1 Introduction / 68
- 3.2 Device Fundamentals / 69
- 3.3 Depletion, or Space-Charge, Regions / 70
- 3.4 Junction Fields and Potentials / 73

xii CONTENTS

- 3.5 Junction Capacitance / 78
- 3.6 Junction Breakdown / 81
- 3.7 $P - N$ Junction Diodes / 89
- 3.8 $P - N$ Junction Surface and End Effects / 93
- 3.9 The Bipolar Transistor / 95
- 3.10 Transit Time/Gain Bandwidth Product / 103
- 3.11 Graded Base Transistor / 106
- 3.12 Base Width Modulation / 108
- 3.13 Base Spreading Resistance / 108
- 3.14 Emitter Crowding / 111
- Problems / 111
- References / 113

Chapter 4. Nuclear Environments / 114

- 4.1 Introduction / 114
- 4.2 The Source / 114
- 4.3 Detonation Energy / 115
- 4.4 Fireball Radiative Growth / 118
- 4.5 Shock and Blast Hydrodynamics / 124
- 4.6 Thermal Radiation / 132
- 4.7 Thermal Absorption and Heating / 138
- 4.8 Nuclear Radiation / 142
- 4.9 Neutrons / 143
- 4.10 Gamma Rays / 145
- 4.11 Electromagnetic Pulse / 149
- 4.12 Dust and Debris / 153
- Problems / 154
- References / 155

Chapter 5. Neutron Damage Effects / 157

- 5.1 Introduction / 157
- 5.2 Fission Neutron Sources / 157
- 5.3 Fusion Neutron Sources / 158
- 5.4 Crosssections and Fluence / 160
- 5.5 Neutron Displacement Damage / 161
- 5.6 Displacement Kinematics / 162
- 5.7 Neutron-Induced Ionization / 164
- 5.8 Neutron Shielding / 165
- 5.9 Minority-Carrier Lifetime/Neutron-Damage Constants / 167
- 5.10 Current Gain Degradation / 179
- 5.11 Radiation-Inclusive Ebers-Moll Models / 186
- 5.12 Conductivity Modulation / 192

- 5.13 Resistivity Effects / 194
- 5.14 Annealing / 200
- 5.15 Output Leakage Current Effects / 210
- Problems / 213
- References / 214

Chapter 6. Gamma-Ray Damage Effects / 216

- 6.1 Introduction / 216
- 6.2 X-Ray and Gamma-Ray Sources / 217
- 6.3 Specific Source Types / 218
- 6.4 Gamma-Ray and X-Ray Shielding / 219
- 6.5 Ionization Damage / 222
- 6.6 Ionization Effects on Surface States / 226
- 6.7 Charge-Trapping / 229
- 6.8 Field Effect Transistors / 230
- 6.9 Effects on MOS and CMOS Structures / 243
- 6.10 MNOS Devices / 250
- 6.11 PMOS/NMOS Devices / 251
- 6.12 CMOS/SOS Devices / 252
- 6.13 Bipolar Devices / 254
- Problems / 263
- References / 264

Chapter 7. Dose-Rate Effects / 266

- 7.1 Introduction / 266
- 7.2 Diode Photocurrent / 266
- 7.3 Transistor Photocurrent / 271
- 7.4 NonLinear Photocurrent / 275
- 7.5 Radiation Storage Time / 277
- 7.6 Propagation Delay Time / 281
- 7.7 Latchup / 283
- 7.8 Upset / 293
- 7.9 Single-Event Upset / 296
- 7.10 Transient Effects on Capacitors / 315
- 7.11 Transient Effects in Resistors / 320
- Problems / 321
- References / 322

Chapter 8. Electromagnetic Pulse / 326

- 8.1 Introduction / 326
- 8.2 Times and Frequency Description / 327
- 8.3 Atmospheric and Global Effects / 330

xiv CONTENTS

- 8.4 Surface Burst EMP / 334
- 8.5 Surface and Subsurface Reflections / 336
- 8.6 EMP Coupling to Shielded Cables / 339
- 8.7 EMP Response of Antennas / 346
- 8.8 Shielding and Coupling / 350
- 8.9 Effects on Devices and Components / 355
- 8.10 System-Generated EMP / 362
- Problems / 365
- References / 366

Chapter 9. Dosimetry / 369

- 9.1 Introduction / 369
- 9.2 Dosimetry Fundamentals / 369
- 9.3 Nuclear Environment Correlation / 375
- 9.4 Unfolding / 380
- 9.5 Foil Dosimeters / 382
- 9.6 Thermoluminescent Dosimeters / 383
- 9.7 Calorimetric Dosimeters / 384
- 9.8 PIN Dosimeters / 386
- 9.9 Proportional and Geiger-Mueller Counters / 388
- 9.10 Scintillators / 390
- 9.11 Cavity Ionization Chambers / 391
- 9.12 Photographic Emulsions / 393
- Problems / 393
- References / 394

Chapter 10. Component and Circuit Hardness Design / 396

- 10.1 Introduction / 396
- 10.2 Component Selection: Neutron Effects / 396
- 10.3 Component Selection: Total Dose Effects / 406
- 10.4 Component Selection: Dose Rate Effects / 416
- 10.5 Component Selection: EMP Effects / 429
- 10.6 Circuit Design Margins / 432
- 10.6(a) Neutron Circuit Margins / 433
- 10.6(b) Dose Rate Circuit Margins / 435
- 10.6(c) Total Dose Circuit Margins / 436
- 10.6(d) EMP Circuit Margins / 436
- 10.7 Photocurrent Compensation / 438
- 10.8 Differential Systems / 439
- 10.9 Filters / 441
- 10.10 Current-Limiting / 442
- 10.11 Circuit Hardening Potpourri / 443
- 10.12 Gallium Arsenide Devices / 444

- 10.13 Thermionic Integrated Circuits / 447
- References / 448

Chapter 11. System Hardness Design / 452

- 11.1 Introduction / 452
- 11.2 Space Systems / 452
- 11.3 Strategic Systems / 463
- 11.4 Tactical Systems / 466
- 11.5 System Design Safety Margins / 471
- 11.6 Combined Radiation and Temperature Effects / 473
- 11.7 System-Hardening Methods: Reset / 477
- 11.8 System-Hardening Methods: Redundancy / 478
- 11.9 System-Hardening Methods: Circumvention / 481
- 11.10 System-Hardening Methods: Computer Memories / 484
- 11.11 System-Hardening Methods: Microprocessors, Computers / 486
- References / 492

Chapter 12. Statistical Aspects of Hardness Design / 495

- 12.1 Introduction / 495
- 12.2 System Survival Probabilities / 495
- 12.3 Survival Probability Distributions / 497
- 12.4 Binomial Statistics of Sample Measurements / 503
- 12.5 One-Sided Tolerance Limits / 507
- 12.6 Statistics For Neutron Effects / 510
- 12.7 Statistics For Total Dose Effects / 515
- References / 520

Chapter 13. Hardness Assurance

- 13.1 Introduction / 521
- 13.2 Hardness-Assurance Tree / 522
- 13.3 Design Features Requiring Hardness Assurance / 524
- 13.4 Production-Assurance Relationships / 525
- 13.5 Semiconductor Device Controls and Screens / 526
- 13.6 Data-Monitoring / 529
- 13.7 Data-Analysis Methodology / 530
- 13.8 Hardness-Assurance Verification: Radiation Tests / 536
- 13.9 Hardness-Assurance Verification: Parts / 538
- 13.10 Hardness-Assurance Verification: Modules / 540
- 13.11 Categorizing Hardness Critical Items / 542
- 13.12 Hardness-Assurance Costs: Summary / 548
- References / 550
- Glossary / 551
- Index / 577
