CHAPTER		PAGE
I.	PROPERTIES OF ELECTRIC AND MAGNETIC FIELDS	I
1.1	Electric Fields	I
1.2	Magnetic Fields	6
II.	FORCES AND EQUATIONS OF MOTION	11
2.1	Charge and Mass of Electrons	11
2.2	Forces on an Electron	12
2.3	Equations of Motion; Integration to Obtain Speed	14
2.4	Scaling	16
III.	SIMPLE ELECTRON MOTIONS	20
3.1	Uniform Electric Field	20
3.2	Uniform Magnetic Field	23
3.3	Crossed Electric and Magnetic Fields	26
3.4	Hyperbolic Electrodes; Parabolic Potential Variation	29
IV.	SOME GENERAL RELATIONS	32
4.1	Equations in Polar Coordinates	32
4.2	Radial Electric Field; Conservation of Angular Momentum	33
4.3	Radial Electric Field and Uniform Axial Magnetic Field; Magnetron Cutoff	34
4.4	Busch's Theorem	35
4.4I	Trapping of Electrons in Symmetrical Electric and Magnetic Fields	37
4.5	Radius of Curvature; Focusing Due to Electric Deflection	41
4.6	Index of Refraction in Purely Electric Fields	46
4.7	Liouville's Theorem	48

CHAPTER		PAGE
V.	SOME TYPICAL SPECIAL PROBLEMS	52
5.1	Solution by Inspection	52
5.2	The Rubber Model	54
5.3	Path Tracing	65
VI.	THE PARAXIAL RAY EQUATION	72
6.1	Focusing Action of Fields	73
6.2	Derivation of the Paraxial Ray Equation	76
6.3	Nature of Solutions	78
6.4	Fields as Lenses	79
6.5	Special Properties of Magnetic Lenses	82
6.51	All Magnetic Lenses Positive	82
6.52	Rotation of Image	82
6.53	Weak Magnetic Lenses	83
6.6	Purely Electric Lenses	83
6.61	Relation between Focal Lengths	84
6.62	All Electric Fields between Field-free Regions Positive	85
6.63	Convergence	86
6.64	Weak Electric Lenses	87
6.7	Two-dimensional Fields	88
VII.	MAGNETIC AND ELECTRIC LENSES: ANALYTICAL AND NUMERICAL SOLUTIONS	92
7.1	A Magnetic Lens	92
7.2	Apertures as Electric Lenses	96
7.3	A Uniform Gradient	97
7.4	Lens Composed of Apertures and a Uniform Gradient	98
7.5	Numerical Integration of Paraxial Ray Equation	101
7.6	A Two-potential Lens	104
7.7	Slits in Two-dimensional Systems	107
7.8	Two Two-dimensional Fields	107
7.9	Some Comments about Electron Lenses	113

CONTENTS		xiii
CHAPTER		PAGE
VIII.	THE EFFECT OF THERMAL VELOCITIES	116
8.1	General Considerations	118
8.2	Axially Symmetrical Systems	120
8.21	Bounding Expression	120
8.22	Perfect Focusing	121
8.3	Two-dimensional Systems	125
8.31	Bounding Expression	126
8.32	Perfect Focusing	126
8.4	Application to Crossover or Exit Pupil	129
8.5	Physical Systems and Figure of Merit	131
8.6	Simple Application of Expressions De- rived	135
8.7	Limits Imposed by Thermal Velocities on Voltage Required for Deflection	137
8.8	Validity of Analysis	143
IX.	SPACE CHARGE IN ELECTRON BEAMS	145
9.1	Modification of Paraxial Ray Equations for Small Currents	145
9.2	Case of Uniform Potential	147
9.3	Magnetically Focused Constant Diameter Beams	152
9.4	Perturbations in Constant Diameter Beams	155
9.5	Effect of Thermal Velocities	159
9.6	Magnetically Confined Beams	161
9.7	Stability of the Flow	164
9.8	Ions in the Flow	168
9.9	Harris Flow	170
X.	ELECTRON GUNS	173
10.1	Guns Utilizing Rectilinear Flow	174
XI.	PERIODIC FOCUSING FIELDS	194
11.1	Periodic Focusing in Absence of Space Charge	194
11.2	Alternate Positive and Negative Lenses	197
11.3	Focusing with Space Charge	201

CHAPTER		PAGE
11.4	Stability of the Flow	204
11.5	Nature and Convergence of the Lenses	208
11.6	More General Approach	210
11.7	Discussion of Periodic Focusing	211
XII.	ABOUT DESIGNING ELECTRON BEAM DEVICES	214
	APPENDIX I. Vector Relations	216
	APPENDIX II. Table of Physical Constants	218
	INDEX	219
