CONTENTS

CHAPTER		PAGE
I.	INTRODUCTION	1
II.	SIMPLE THEORY OF TRAVELING-WAVE TUBE GAIN	5
	2.1 Description of a Traveling-Wave Tube	6
	2.2 The Type of Analysis Used	7
	2.3 The Field Caused by an Impressed Current	9
	2.4 Convection Current Produced by the Field	11
	2.5 Overall Circuit and Electronic Equation	13
III.	THE HELIX	19
	3.1 The Helically Conducting Sheet	23
	3.1a The phase velocity	24
	3.1b The impedance parameter $(E^2/\beta^2 P)$	27
	3.1c Impedance of the helix	29
	3.2 The Developed Helix	31
	3.3 Effect of Wire Size	34
	3.3a Two turns per wavelength	36
	3.3b Four turns per wavelength	41
	3.4 Transmission Equations and Helices	43
	3.4a Effect of dielectric on helix impedance parameter	44
	3.4b Coupled helices	44
IV.	FILTER-TYPE CIRCUITS	49
	4.1 Field Solutions	52
	4.2 Practical Circuits	59
	4.3 Lumped Iterated Analogues	61
	4.4 Traveling Field Components	71
	4.5 Effective Field and Effective Current	74
V.	GENERAL CIRCUIT CONSIDERATIONS	79
	5.1 Group and Phase Velocity	81
	5.2 Gain and Bandwidth in a Traveling-Wave Tube	84
	5.3 A Comparison of Circuits	85
	5.3a Uniform current density throughout field	85
	5.3b Narrow beams	87
	5.4 Physical Limitations	92
	5.4a Effect of wall thickness	92
	5.4b Transit time	93
	5.5 Attenuation	95
	5.5a Attenuation of circuits	96

CHAPTER PAGE
VI. The Circuit Described in Terms of Normal Modes 98
6.1 Excitation of Transverse Magnetic Modes of Propagation by a Longitudinal Current 100
6.2 Comparison with Results of Chapter II 106
6.3 Expansion Rewritten in Another Form 106
6.4 Iterated Structures 108
VII. Equations for Traveling-Wave Tube 109
7.1 Approximate Circuit Equation 110
VIII. The Nature of the Waves 116
8.1 Effect of Varying the Electron Velocity 118
8.2 Effect of Attenuation 121
8.3 Space-Charge Effects 124
8.4 Differential Relations 128
IX. Discontinuities 131
9.1 General Boundary Conditions 133
9.2 Lossless Helix, Synchronous Velocity, No Space Charge 134
9.3 Loss in Helix 135
9.4 Space Charge 137
9.5 Change in Loss 137
9.6 Severed Helix 138
9.7 Severed Helix with Drift Space 141
9.8 Overall Behavior of Tubes 144
X. Noise Figure 145
10.1 Shot Noise in the Injected Current 146
10.2 The Diode Equations 148
10.3 Overall Noise Figure 152
10.4 Other Noise Considerations 155
XI. Backward Waves 157
XII. Power Output 160
XIII. Transverse Motion of Electrons 168
13.1 Circuit Equation 170
13.2 Ballistic Equation 172
13.3 Combined Equation 173
13.4 Purely Transverse Fields 174
13.5 Mixed Fields 179
XIV. Field Solutions 182
14.1 The System and the Equations 184
14.2 Waves in the Absence of Electrons 188
14.3 Waves in the Presence of Electrons 190
14.4 A Special Type of Solution 195
14.5 Comparison with Previous Theory 196

CHAPTER PAGE
14.5a Comparison of circuit equations ... 196
14.5b Electronic comparison ... 197
14.5c The complex roots ... 201
14.6 Some Remarks about Complex Roots ... 203
XV. Magnetron Amplifier ... 206
15.1 Circuit Equation ... 207
15.2 Ballistic Equations ... 208
XVI. Double-Stream Amplifiers ... 213
16.1 Simple Theory of Double-Stream Amplifiers ... 214
16.2 Further Considerations ... 220
XVII. Conclusion ... 221
Appendix I—Miscellaneous Information ... 223
Appendix II—Propagation on a Helically Conducting Sheet ... 229
Appendix III—Stored Energies of Circuit Structures ... 233
Appendix IV—Evaluation of Space-Charge Parameter Q ... 236
Appendix V—Diode Equations of Llewellyn and Peterson ... 239
Appendix VI—Evaluation of Impedance and Q for Thin and Solid Beams ... 242
Appendix VII—How to Calculate the Gain of a Traveling-Wave Tube ... 252
Bibliography ... 256
Index ... 259
