

Contents

European Aspects of Tube Techniques—F. Brook	1
High Temperature-High Power Microwave Windows—E. M. Doyle	11
Heat Treatment Studies on High Alumina Ceramics—L. Reed	15
The Package Concept of Ceramic-to-Metal Seals—F. Budde	31
A Method for Producing Low Temperature Metal-Ceramic Seals—J. W. Tweeddale, L. A. Tentarelli and J. M. White	47
A Practical Method of Ceramic-to-Metal Seal Testing—L. R. Falce	51
Present Knowledge on Residual Gases in Electron Tubes—P. della Porta	55
Barium Getter Measurements in TV Bulbs—C. W. Reash and J. S. Wagener	71
Improved High Mass Range Resolution with an Omegatron Mass Spectrometer—J. H. Bloom, C. E. Ludington and R. L. Phipps	77
Vacuum Circuit Modules for Critical Environments—E. H. Boden	83
The Development of High Temperature Integrated Tube-Circuit Combinations—D. D. Mickey and R. M. Hughes	87
Some Techniques of Design and Construction of Metal Envelope Vacuum Tubes for Severe Environments—L. R. Falce	101
The Techniques and Applications of Film Casting—R. L. Lambert	105
Application of the Transfer Tape Technique in Electron Tubes—P. F. Varadi, H. D. Doolittle, K. Etre and R. F. Spurck	109
Precision Brazing in Vacuum or Gas Atmosphere by High Power Reflective Light Source—J. H. O'Neill	115
Strengthening of Components of Electron Tube Devices—A. R. Bobrowsky and J. Babakian	117
The Gas Ambient in a High Power Traveling Wave Tube—R. A. Hein	121
Omegatron Investigation of Gases Evolved from Electron Tube Components under Operating Conditions—M. F. Axler	125
A Method of Fabricating Klystron Arch Vane Grids—A. R. Kiefer, C. K. Trace and J. M. White	131
Superpower—R. J. Bondley	135
High Power Tube Techniques—G. L. Guernsey	139
Secondary Emission Characteristics of a Tungsten-Thoria Cermet Cathode—K. Dudley and T. Driscoll	147
A Demountable Beam Analyzer for Studying Magnetically Confined Electron Beams—A. S. Gilmour and D. D. Hallock	153
Thin Films in Electron Tubes—J. W. Hall II and J. C. Hickle	159
Techniques for Precision Deep Drawing of Molybdenum—V. R. Burris	169
A Method for Eliminating Binder Contamination from Oxide Coated Cathodes—D. MacNair	173
Breakdown Studies on Different Binders used in Electron Tube Devices—K. Etre and P. F. Varadi	179
Thoriated Rhenium Tungsten as a Thermionic Emitter—J. A. Jolly	185
The Properties Required for High Current Density Cathodes—J. H. Affleck	193
Field Emission Technology—W. P. Dyke and F. M. Charbonnier	199
Hydrogen Conversion of Thermionic Emitters Containing Alkaline-Earth Carbonates—D. MacNair	211
Properties of Fast-decay Cathode-ray Tube Phosphors—A. Pfahnl	219

The Fabrication of Electron Tube Cathode Base Material from Powder Metal—W. E. Buescher.. ..	223
Evaluation of Cathode Nickels Containing Zirconium and Tungsten—R. C. McRae and A. J. Barraco..	227
Thermionic Emission and Diffusion Studies on Zirconium-doped Nickel Cathodes—H. E. Kern and E. T. Graney	235
Thermionic Emission Properties of Pure Nickel-based Oxide Cathodes—J. V. Florio	241
The Distribution of Cathode Sublimation Deposits in a Receiving Tube as Determined by X-ray Spectrometric Scanning—V. Raag, E. P. Bertin and R. J. Longobucco	249
Sublimation Properties of Oxide Cathodes—J. V. Florio	261
A Simple Circuit for Cathode Interface Measurements—J. J. Gard, Jr. and W. Collier	265
Index	273
