

CONTENTS

| | |
|--|----|
| I. LINEAR ACTIVE TRANSMISSION LINES | 1 |
| 1.1. Equivalent Circuits for Transmission Systems | 2 |
| a. <i>Strip Esaki tunnel diode</i> | 5 |
| b. <i>Electromagnetic wave propagation in free space</i> | 6 |
| c. <i>Pulse propagation on a nerve axon</i> | 6 |
| d. <i>Strip superconducting (Josephson) junction</i> | 6 |
| 1.2. Wave Solutions on Propagation Systems | 6 |
| 1.3. A Simple Active Transmission Line | 8 |
| 1.4. Wave Velocities | 9 |
| a. <i>Phase velocity</i> | 10 |
| b. <i>Group velocity</i> | 10 |
| c. <i>Energy velocity</i> | 12 |
| d. <i>Signal velocity</i> | 12 |
| 1.5. The Complex Dispersion Equation | 13 |
| II. STABILITY OF LINEAR ACTIVE WAVE SYSTEMS | 19 |
| 2.1. Stability of a Distributed Amplifier | 20 |
| 2.2. Modes of a Distributed Oscillator | 25 |
| 2.3. Convective and Absolute Instabilities on Infinite Lines | 27 |
| 2.4. Investigation of the Dispersion Equation for Convective Instability | 30 |
| 2.5. Investigation of the Dispersion Relation for Absolute Instability | 35 |

| | |
|--|-----------|
| 2.6. Propagation and Stability on Discrete Lines | 44 |
| 2.7. A Mechanical Transmission Line | 48 |
| 2.8. The Moving Mechanical Transmission Line | 52 |
| 2.9. Coupled Mode Theory | 55 |
| 2.10. The Electron Beam | 62 |
| 2.11. The Traveling Wave Tube | 65 |
| 2.12. The Laser Oscillator | 71 |
| 2.13. The Laser Amplifier | 81 |
| 2.14. The Kelvin-Helmholtz Instability | 83 |
| III. QUASIHARMONIC ACTIVE PROPAGATION | 93 |
| 3.1. Nonlinear Conductance and Resistance | 94 |
| 3.2. The Equivalent Linearization Procedure | 94 |
| 3.3. Equal Power Interpretation of Equivalent Conductance and Resistance | 100 |
| 3.4. Nonlinear Capacitance and Inductance | 103 |
| 3.5. Quasiharmonic Traveling Wave Amplification | 105 |
| 3.6. The Stability of Saturated Traveling Waves | 108 |
| 3.7. Saturation Power Flow | 112 |
| 3.8. The Quasiharmonic Distributed Oscillator | 114 |
| 3.9. The Gain Condition | 118 |
| 3.10. Power Output Limit for a Long Quarter Wave Oscillator | 125 |
| 3.11. Multimode Oscillations | 127 |
| 3.12. The Laser Oscillator | 137 |
| 3.13. Plasma Wave Propagation | 142 |
| a. Momentum balance and conductivity | 142 |
| b. Plasma oscillation | 144 |
| c. Transverse plasma waves | 147 |
| d. Longitudinal plasma waves | 149 |
| e. Gain and loss mechanisms for longitudinal plasma waves | 154 |
| f. Quasiharmonic estimate of the saturation wave amplitude | 156 |

| | |
|---|------------|
| IV. NONLINEAR ACTIVE PROPAGATION | 165 |
| 4.1. Van der Pol's Equation Again | 166 |
| 4.2. Multidimensional Phase Space Systems | 168 |
| 4.3. Properties of the Phase Space | 169 |
| 4.4. Phase Plane Theorems | 173 |
| 4.5. Waves of Permanent Profile | 174 |
| 4.6. The Simple Autonomous Transmission Line | 175 |
| 4.7. The General Autonomous Ladder Line | 182 |
| 4.8. Analytic Examples | 186 |
| a. <i>The series r, shunt j(v) — c line</i> | 186 |
| b. <i>The series l, shunt j(v) — c line</i> | 190 |
| c. <i>The series r — l, shunt j(v) — c line</i> | 192 |
| d. <i>The parallel r — l, shunt j(v) — c line</i> | 193 |
| e. <i>Other systems</i> | 194 |
| 4.9. Transient Analysis | 195 |
| a. <i>The approximate equation</i> | 196 |
| b. <i>Shock wave formation</i> | 197 |
| c. <i>Variation in pulse length</i> | 199 |
| d. <i>General approach to transient analysis</i> | 200 |
| 4.10. Stability Analysis | 203 |
| 4.11. Steady Propagation on a Lumped Line | 206 |
| 4.12. Pulse Interaction | 208 |
| 4.13. Tunnel Junction Transmission Lines | 211 |
| 4.14. The Nerve Axon | 212 |
| a. <i>Structure of a neuron</i> | 213 |
| b. <i>Properties of the nerve membrane</i> | 213 |
| c. <i>Propagation of the action potential</i> | 219 |
| d. <i>Nerve models</i> | 221 |
| V. CONSERVATIVE NONLINEAR PROPAGATION | 225 |
| 5.1. Simple Transient Effects | 226 |
| 5.2. Kinematic Waves | 233 |

| | | |
|---|--|-----|
| a. | <i>Linear dispersive wave propagation</i> | 234 |
| b. | <i>Flood waves</i> | 234 |
| c. | <i>Traffic flow waves</i> | 234 |
| 5.3. | Quasilinear Hyperbolic Systems | 235 |
| 5.4. | Nonlinear Transmission Lines with Dispersion | 239 |
| a. | <i>Examination of the characteristics</i> | 240 |
| b. | <i>The profile deformation process</i> | 242 |
| c. | <i>Harmonic generation</i> | 243 |
| 5.5. | Steady Propagation on Lossless Transmission Lines | 247 |
| a. | <i>The mechanical transmission line</i> | 247 |
| b. | <i>Steady propagation on TL-1</i> | 252 |
| 5.6. | The Lorentz Transformation on a Josephson Junction Transmission Line | 256 |
| a. | <i>The Josephson junction transmission line</i> | 256 |
| b. | <i>The Lorentz transformation</i> | 259 |
| 5.7. | The Active Josephson Junction Line | 261 |
| 5.8. | The Manley-Rowe Relations | 266 |
| 5.9. | The Distributed Parametric Amplifier | 270 |
| 5.10. | Saturation on a Distributed Parametric Amplifier | 273 |
| 5.11. | Lagrangian Formulation for a Distributed System | 278 |
| 5.12. | Stability Analysis | 282 |
| a. | <i>Stability of a periodic wave train</i> | 282 |
| b. | <i>Pulse stability</i> | 288 |
| 5.13. | Pulse Interaction | 289 |
| APPENDIX: THE HILBERT TRANSFORMS | | 293 |
| BIBLIOGRAPHY | | 299 |
| Books and Journal Articles | | 299 |
| Cross-Reference Listing | | 319 |
| Films | | 321 |
| INDEX | | 323 |
