|---------------------------------|-------|
| FOREWORD TO THE ENGLISH EDITION | xi    |
| FOREWORD                        | xxvii |
| INTRODUCTION                    | xxix  |

## PART ONE

### OSCILLATORY SYSTEMS USED AT MICROWAVE FREQUENCIES

#### I. SOME DATA ON OSCILLATORY SYSTEMS USED IN MICROWAVE ELECTRONICS

|   |    |
|---|----|
| 1. Introduction   | 1  |
| 2. Narrow-band oscillatory systems — cavity resonators      | 1  |
| 3. Broad-band oscillatory systems — periodic delay networks | 10 |

## PART TWO

### FUNDAMENTALS OF MICROWAVE ELECTRONICS

#### II. FUNDAMENTAL ELECTRONIC PHENOMENA AT MICROWAVE FREQUENCIES

|  |    |
|--|----|
| 4. General principles  | 23 |
| 5. Velocity modulation   | 24 |
| 6. Ballistic analysis of electron bunching   | 28 |
| 7. Electron bunching in a field-free drift space                                     | 29 |
| 8. Electron bunching in a constant accelerating field                                | 37 |
| 9. Electron bunching in a uniform retarding field                                    | 37 |
| 10. Cascade bunching of electrons  | 40 |
| 11. Bunching of an unmodulated electron beam in an alternating field                 | 44 |
| 12. Electron bunching in a travelling wave of constant amplitude                     | 47 |
| 13. Electron bunching in a travelling wave varying exponentially with distance       | 52 |
| 14. Electron bunching in a travelling wave with crossed electric and magnetic fields | 56 |
| 15. Electron-wave analysis of bunching   | 63 |

#### III. ENERGY EXCHANGE BETWEEN AN ELECTRON BEAM AND AN ALTERNATING ELECTRIC FIELD

|  |    |
|--|----|
| 16. Basic equations  | 72 |
| 17. Calculation of the interaction power between an unmodulated electron beam and an alternating field | 73 |
| 18. The retarding-field diode  | 77 |
| 19. Interaction between an electron beam and a travelling wave of constant amplitude                   | 78 |

|   |     |
|---|-----|
| 20. Interaction between an electron beam and a travelling wave varying exponentially with distance                        | 84  |
| 21. Energy exchange between an electron beam and a travelling wave in crossed electric and magnetic fields                | 88  |
| 22. Differences between systems without constant fields (O-type), and systems with constant crossed fields (M-type)       | 91  |
| 23. Interaction between a density-modulated electron beam and an alternating electric field                               | 92  |
| 24. Electron-wave interaction between two electron streams  | 97  |
| 25. Electron-wave interaction in crossed electric and magnetic fields   | 103 |
| 26. Amplification of space-charge waves by varying the beam velocity  | 104 |
| 27. Amplification of space-charge waves when the electron beam moves through a resistive medium (resistive amplification) | 108 |

## PART THREE

## MICROWAVE ELECTRON DEVICES

|  |     |
|--|-----|
| IV. EQUIVALENT CIRCUITS OF MICROWAVE ELECTRON DEVICES AND THE FUNDAMENTAL PRINCIPLES ADOPTED IN ANALYSIS |     |
| 28. Introduction   | 113 |
| 29. Equivalent circuit of narrow-band microwave devices  | 113 |
| 30. Analysis of broad-band microwave devices   | 116 |
| V. MICROWAVE ELECTRON DEVICES WITH NARROW-BAND OSCILLATORY CIRCUITS                                      |     |
| 31. Two-resonator klystron amplifiers  | 119 |
| 32. Three-resonator klystrons  | 122 |
| 33. Klystron frequency multipliers   | 129 |
| 34. Two-resonator klystron oscillators   | 131 |
| 35. Buffer-klystron oscillators  | 137 |
| 36. Single-resonator drift-space klystrons   | 138 |
| 37. Travelling-wave klystrons  | 139 |
| 38. Reflex-klystron oscillators  | 141 |
| 39. Reflex-klystron frequency multipliers  | 154 |
| 40. Electron-beam diodes   | 155 |
| 41. Magnetron oscillators  | 160 |
| VI. MICROWAVE ELECTRON DEVICES WITH BROAD-BAND OSCILLATORY CIRCUITS                                      |     |
| 42. Introduction   | 170 |
| 43. Travelling-wave amplifiers   | 170 |
| 44. Travelling-wave tubes with resonant outputs  | 180 |
| 45. Magnetron amplifiers   | 181 |
| 46. Oscillators of the travelling-wave tube type   | 186 |
| 47. T.W.T. oscillators with internal feedback  | 188 |

|  |     |
|--|-----|
| 48. T.W.T. oscillators with external feedback  | 193 |
| 49. Backward-wave T.W.T. oscillators — carcinotrons                                  | 197 |
| 50. O- and M-type backward-wave oscillators  | 200 |
| 51. Analysis of O-type backward-wave oscillators                                     | 202 |
| 52. Cascade bunching of electrons applied to the theory of backward-wave oscillators | 215 |
| 53. Analysis of M-type backward-wave oscillators                                     | 223 |
| 54. Carmatrons   | 230 |
| 55. Electron devices with E-type interaction   | 230 |
| VII. MICROWAVE DEVICES WITH ELECTRON-WAVE INTERACTION                                |     |
| 56. Twin-beam amplifiers (electron-wave tubes)                                       | 232 |
| 57. M-type electron-wave tubes   | 233 |
| 58. Voltage-jump amplifiers  | 234 |
| 59. Amplifiers based on the effects of resistance (resistive amplifiers)             | 234 |
| 60. Diocotron oscillators  | 236 |
| 61. Electron-wave oscillators with a retarding field                                 | 237 |
| 62. Mitrons  | 239 |
| 63. Strophotrons   | 240 |
| BIBLIOGRAPHY   | 243 |
| INDEX  | 247 |
