<b>General References and Review Articles . . . . .</b>	<b>ix</b>
<b>1. Trajectory Optics in Quadrupole Systems . . . . .</b>	<b>1</b>
1.1 General Trajectory Equations . . . . .	1
1.2 Types of Magnetic Lenses . . . . .	3
1.3 Linear Quadrupole Transformation . . . . .	9
1.4 Principal Trajectories and Focal Properties . . . . .	12
1.5 Digital Computer Programs . . . . .	16
1.6 Thin-Lens Approximation . . . . .	17
1.7 Graphical Method . . . . .	20
1.8 Doublets, Triplets . . . . .	24
1.9 Analog Computer . . . . .	29
1.10 Chromatic Aberration . . . . .	33
1.11 Quadrupole Magnet Cross Sections . . . . .	43
1.12 Field Expansion with Quadrupole Symmetry . . . . .	47
1.13 Second- and Third-Order Aberrations . . . . .	51
1.14 End Fields and Effective Quadrupole Length . . . . .	56
1.15 Quadrupole Design Example . . . . .	62
References . . . . .	74
<b>2. Trajectory Optics in Deflecting Magnets . . . . .</b>	<b>76</b>
2.1 Curved Coordinate System . . . . .	76
2.2 Types of Deflecting Magnets . . . . .	77
2.3 Field Expansion with Symmetry Plane . . . . .	81
2.4 Linear Deflecting Magnet Transformation . . . . .	84
2.5 Second-Order Aberrations . . . . .	87
2.6 Two-Dimensional-End Fields . . . . .	90
2.7 Sector Magnet . . . . .	91
2.8 Magnetic Wedge . . . . .	97
2.9 Rectangular Magnet . . . . .	101
2.10 Synchrotron Magnet and Effective Length . . . . .	103
2.11 Analog Computer . . . . .	108
2.12 Trajectory Equation for Large Momentum Spread . . . . .	110
References . . . . .	112
<b>3. Composite Systems and Spectrometers . . . . .</b>	<b>113</b>
3.1 Nondispersive Deflecting Systems . . . . .	113
3.2 Trajectory Length and Isochronous Deflecting Systems . . . . .	125
3.3 Types of Spectrometers . . . . .	131

3.4 Sloped-Window Spectrometer . . . . .	133
3.5 Image Spectrometer . . . . .	146
3.6 Special Image Spectrometers . . . . .	149
3.7 Stability of Floating Wire . . . . .	153
3.8 Beam Alignment and Tolerances . . . . .	156
References . . . . .	160
<b>4. Envelope Optics and Particle Beams . . . . .</b>	<b>161</b>
4.1 Liouville's Theorem . . . . .	161
4.2 Magnet System Acceptance Volume . . . . .	164
4.3 Single Magnet Acceptance Area . . . . .	165
4.4 Linear Beam Ellipse Transformation . . . . .	166
4.5 Envelope Equation . . . . .	172
4.6 Envelope Representation of Trajectories . . . . .	174
4.7 Envelope in Terms of Conjugated Trajectories . . . . .	175
4.8 Analog Computer . . . . .	177
4.9 Envelope in a Periodic F0D0 Channel . . . . .	179
4.10 Acceptance of Periodic F0D0 Channel . . . . .	184
4.11 Momentum Separation . . . . .	188
4.12 Mass Separation . . . . .	194
4.13 Acceptance of Electrostatic Mass Separator . . . . .	195
References . . . . .	203
