

Contents

Preface to the English Translation	v
Introduction	vii

Chapter 1. Pulse Compression Signals

[1] Optimal Reception of Signals—Matched Filter	1
[2] Response of a Pulsed Signal to a Matched Filter— Correlation Method	6
[3] Optimal Reception of Frequency-Modulated Pulse Signals .	10
[4] Compression Ratio	15
[5] Spectrum Compression	18
[6] Admissible Errors in the Frequency - (Phase-) Modulation Law for Systems with Pulse Compression	20
[7] Formation of Sophisticated Signals	28

Chapter 2. The Uncertainty Principle

[8] The Woodward Ambiguity Function	35
[9] Examples	40
[10] Some Properties of Ambiguity Functions—The Radar Uncertainty Principle	49
[11] Analogy with Quantum Physics	55
[12] Uncertainty Principle of Quantum Physics	62
[13] Other Forms of the Uncertainty Relationship	67
[14] Resolution and Selectivity of a Linear Measuring Device .	73
[15] Resolution of Spectral Analysis	78
[16] Measurement of Instantaneous Frequency	81
[17] The Generalized Ambiguity Function	85

Chapter 3. The Ambiguity Function in the Statistical Theory of Radar

[18] Sampling Space	98
[19] Principle of Maximum Likelihood	104
[20] The Ambiguity Function in Relation to Resolution	109
[21] The Ambiguity Function in Relation to the Measured Parameters	115
[22] Radar Observations and Measurements in Relation to General Physics	121

Chapter 4. Synthesis of Signals Using Ambiguity Functions

[23] Some Remarks on Signal Synthesis	126
[24] Classes of Signals and Autocorrelation Functions— Statement of the Synthesis Problem	130
[25] Synthesis of the Autocorrelation Function from its Magnitude and Phase at Discrete Points	139
[26] Synthesis of the Autocorrelation Function from its Magnitude	142
[27] Optimal Autocorrelation Functions—Linear Approximation	145
[28] Optimal Autocorrelation Functions—Quadratic Approximation	155
[29] Synthesis of Autocorrelation Functions Given Over a Bounded Time Interval	162
[30] Comparison of Optimal Power Spectra	165
[31] Synthesis of FM Signals from Given Power Spectra	169
[32] Phase-Modulated Signals	175
[33] Statistical Synthesis of PM Signals	183
[34] Synthesis of FM Signals from Two Cross Sections of the Ambiguity Function	192
[35] Rotation of the Ambiguity Function	198
[36] FM Signals with Uniform Side Lobes in the t, Ω -Plane	205
[37] Approximate Synthesis Method from the Magnitude and Phase of an Arbitrary Ambiguity Function	213
[38] Generalization of Synthesis from the Magnitude of an Ambiguity Function	218

Appendices

Appendix 1. Spectra of Wide-Band FM Signals Approximated by the Stationary Phase Method	227
--	-----

Appendix 2.	Calculation of Phase Measurement Errors . . .	233
Appendix 3.	Estimate of Amplitude Distribution for a Signal with Random Initial Phase	236
Appendix 4.	Determination of the Dolph-Chebyshev Autocorrelation Function and the Corresponding Power Spectra	238
Appendix 5.	Spheroidal Functions	240
References	244
Author Index	249
Subject Index	251
