Contents

Preface ix

1 Low-pass filtering and visual averaging 1
- 1.1 Overview 1
- 1.2 Low-pass filtering of shot noise 6
- 1.3 Visual averaging 13
- 1.4 Baseline subtraction 15

2 Multiple time averaging and drift 17
- 2.1 Multiple time averaging methods 18
- 2.2 Drift 19
- 2.3 Multiple time averaging by oscilloscope 22
- 2.4 Multiple time averaging by computer 22

3 Phase-sensitive detector methods 29
- 3.1 Adaptation of resistor bridge strain gauge 29
- 3.2 AC coupled amplifier 30
- 3.3 Drift rejection of PSD 34
- 3.4 White noise error 35
- 3.5 Miscellaneous applications 37

4 Spectral view of signal recovery 44
- 4.1 General method 44
- 4.2 Spectral noise component 47
- 4.3 Pulse spectrum 51
- 4.4 Dependence of white noise amplitude upon bandwidth 52
- 4.5 Noise waveform 54
- 4.6 Spectral and time-domain views of signal pulse recovery 54

4.7 Shot noise amplitude 56
4.8 Thermal noise amplitude 58

5 1/f noise 60
5.1 General properties 60
5.2 Measurement time independence 62
5.3 Response to combined 'noise' 65
5.4 Experimental result 66

6 Frequency response calculations 69
6.1 Low-pass filter 70
6.2 Running average 72
6.3 Visual averaging 73
6.4 Baseline offset correction 74
6.5 Sloping baseline correction 80
6.6 Step measurement 81
6.7 Spatial frequency components of 1/f noise 83
6.8 Frequency response of multiple time averaging 85

7 Frequency-domain view of the phase-sensitive detector 91
7.1 Analogue multiplier PSD 92
7.2 White noise error 96
7.3 Reversing PSD 98
7.4 Chopping PSD 100
7.5 Compromise arrangements 103
7.6 PSD imperfections 104
7.7 Non-phase-sensitive detectors 105
7.8 Recovery of a signal submerged in noise 109

8 Digitisation and noise 111
8.1 Additional noise due to digitisation 111
8.2 Analogue-to-digital converters 113
8.3 Suitability of real ADC circuits for taking average samples 117
8.4 Point sampling gate 118
8.5 Aliasing 121

9 Magnitude determination for transient signals of known shape and timing 126
9.1 Flash spectrometer 126
9.2 Limit setting 128
9.3 Weighted pulse sampling 131
9.4 Matched filtering 136
9.5 Boxcar sampling gate 138
9.6 Offset, drift and 1/f noise 140
9.7 Peak and valley detectors 152
9.8 Software realisation of weighted pulse sampling 156

10 Measurement of the time of occurrence of a signal transient 159
10.1 Method for timing a transient with minimum white noise error 160
10.2 Signal pulse timing 164
10.3 Signal step timing 176
10.4 Comparison of the step and pulse methods 178
10.5 Offset, drift and $1/f$ noise 180
10.6 Lock-in amplifier 184
10.7 Autocorrelation methods 185

Appendix: Fourier analysis 188

Index 191
