PREFACE	vii
EDITORIAL PREFACE	xii
CHAPTER 1 - INTRODUCTION	
1.1 General	1
1.2 Different Types of Dielectric and Dielectric-loaded Antennas	3
1.3 Application of Dielectric and Dielectric-loaded Antennas at Microwave and Millimeter-wave Frequencies	7
1.4 Scope of the Present Book	9
References	10
CHAPTER 2 - CYLINDRICAL ANTENNAS	
General	11
2.1 Electromagnetic Boundary Value Problem of the Circular Cylindrical Dielectric Rod: Surface Waves	13
2.1.1 Orthogonality Relations	14
2.1.2 Hybrid Modes - Field Components and Characteristic Equation	15
2.2 Electromagnetic Boundary Value Problem of the Dielectric-coated Circular Cylindrical Metal Rod: Surface Waves	23
2.3 Theories of Radiation	28
2.3.1 Scalar Huyghen's Theory	28
2.3.2 Schelkunoff's Equivalence Principle	32
2.3.3 Two Aperture Theory	37
2.3.4 Scattering Theory	44
2.3.5 'Wavelength Lens' Approach	48
2.3.6 Gain of the Cylindrical Antenna	48
2.3.7 Merits and Demerits of the Different Theories of Radiation	49

2.4	Numerical Results and Experimental Verification of Radiation Characteristics	54
2.4.1	Radiation Patterns	54
2.4.2	Gain	61
2.5	Source-excited Cylindrical Dielectric Rod and Efficiency	63
2.6	Impedance Characteristics	73
2.7	Variations of the Cylindrical Dielectric Rod Antenna	76
2.7.1	Stepped Dielectric Constant End Fire Antenna	76
2.7.2	Periodic Dielectric Rod Antenna	77
2.7.3	Dielectric-rod Backfire Antenna	82
2.7.4	Composite Dielectric Rod Antenna	83
2.8	Dielectric Tube Antenna	83
2.8.1	Electromagnetic Problem of the Dielectric Tube	83
2.8.2	Radiation Characteristics of Dielectric Tube Antennas	89
References	92

CHAPTER 3 - CONICAL ANTENNAS

General	105
3.1	Dielectric Cone, Dielectric-coated Metal Cone and Spherically-tipped Dielectric-coated Metal Cone and Their Electromagnetic Boundary Value Problems	108
3.1.1	Radiation from a Semi-infinite Dielectric-coated Spherically-tipped Perfectly Conducting Cone	108
3.2	Approximate Theoretical Methods of Study of the Radiation and Gain of Conical Structures .	110
3.2.1	Theory of Radiation from a Tapered Dielectric Rod Antenna using Schelkunoff's Equivalence Principle	111
3.2.2	Theory of Radiation from a Tapered Dielectric Rod Antenna using the Concept of m Radiating Planar Apertures	114
3.2.3	Approximate Theory of Radiation and Gain of a Finite Length Dielectric-coated Spherically-tipped Conducting Cone	118
3.3	Numerical Results and Experimental Verification of Radiation Characteristics	124
3.3.1	Radiation Patterns	124
3.3.2	Gain	130
References	132

CHAPTER 4 - SPHERICAL ANTENNAS

General	135
4.1 Electromagnetic Boundary Value Problems of the Dielectric Sphere and the Dielectric-coated Conducting Sphere	138
4.1.1 Electromagnetic Boundary Value Problem of the Dielectric Sphere Excited by Delta-function Electric and Magnetic Sources	140
4.1.2 Electromagnetic Boundary Value Problem of the Dielectric-coated Conducting Sphere Excited by Delta-function Electric and Magnetic Sources	145
4.2 Theories of Radiation and Gain	148
4.2.1 Schelkunoff's Equivalence Principle	149
4.2.2 Scattering Theory	152
4.2.3 Lens Theory	154
4.2.4 Approximate Theory of Radiation and Gain of Truncated Dielectric Spherical Antennas and of Truncated Dielectric-coated Antennas Excited in the Unsymmetric Hybrid Mode	160
4.2.5 Huyghen's Source Theory	163
4.3 Dielectric-Sphere-Loaded Horns	167
4.3.1 Dielectric-Sphere-Loaded Conical Horn	167
4.3.2 Dielectric-Sphere-Loaded Radial Surface-wave Antenna	170
4.4 Numerical Results and Experimental Verification	176
4.4.1 Radiation Patterns	177
4.4.2 Gain	181
References	183

CHAPTER 5 - RECTANGULAR ANTENNAS

General	189
5.1 Rectangular Dielectric Rod and Tapered Rectangular Dielectric Rod and Their Boundary Value Problems	189
5.1.1 Field Components and Characteristic Equations of Rectangular Dielectric Rod for TE Modes	191
5.1.2 Field Components and Characteristic Equations for TM Modes for the Rectangular Dielectric Rod	195
5.1.3 Field Components and Characteristic Equations for the Tapered Rectangular Dielectric Rod	196
5.2 Theories of Radiation and Gain	197
5.2.1 Radiation and Gain Characteristics of Rectangular Dielectric Rod Antenna	197

5.2.2	Radiation and Gain Characteristics of Tapered Rectangular Rod Antenna	201
5.3	Numerical Results and Experimental Verification	203
5.3.1	Radiation Patterns	203
5.3.2	Gain	206
5.4	Launching Efficiency of Rectangular Dielectric Rod	208
5.5	Rectangular Dielectric Rod Backfire Antenna .	210
5.6	Metal Walls in Close Proximity to a Rectangular Dielectric Antenna	215
	References	215

CHAPTER 6 - DIELECTRIC HORNS AND DIELECTRIC- LOADED METAL HORNS

General	219	
6.1	Circular Cylindrical Dielectric Horn - Theory and Experiment	222
6.1.1	Solid Conical Dielectric Horn	222
6.1.2	The Cassegrain Antenna Employing Conical Dielectric Horn	230
6.1.2.1	General considerations	233
6.1.2.2	Subreflector diameter and edge illumination	236
6.1.2.3	Dielectric cone	237
6.1.2.4	Launching horn	242
6.1.2.5	Experimental results	243
6.1.3	Hollow Conical Dielectric Horn	243
6.2	Solid Rectangular Dielectric Horn. Theory and Experiment	252
6.3	Dielectric-loaded Metal Horns	254
6.3.1	Dielectric-loaded Rectangular Metal Horns	254
6.3.1.1	Symmetrical E-plane loading . .	254
6.3.1.2	Trifurcated E-plane dielectric- loaded rectangular horn	259
6.3.1.3	Centrally dielectric-loaded rectangular metal horn	260
6.3.1.4	Multimode dielectric-loaded rectangular horn	261
6.3.2	Dielectric-loaded Metal Circular Horns.	262
6.3.2.1	Dielectric-loaded circular wave-guide antenna	262
6.3.2.2	Dielectric-loaded metal conical horn	265
6.3.2.3	Dielectric-coated conical horn.	269
6.3.2.4	Dielectric-loaded biconical horn for circular polarization.	271
6.3.2.5	Dual-band waveguide feed loaded with dielectric ring	271

6.3.2.6 Dielectric-loaded corrugated dual-frequency circular waveguide horn feed	271
References	273

CHAPTER 7 - OTHER TYPES OF DIELECTRIC AND DIELECTRIC-LOADED ANTENNAS

General	277
7.1 Electric Dipole in Dielectric Sphere	277
7.2 Loop and Capacitor-type Antennas with Lossy Cores	280
7.2.1 Loop Antenna	281
7.2.2 Dipole Antenna	283
7.2.3 Comparison of the Two Antenna Types	284
7.3 Loops and Dipoles with Lossy Shells	286
7.4 Corrugated Dielectric Rod Antenna	288
7.5 Reduction of Antenna Dimensions by Dielectric Loading	292
7.5.1 Dielectric-coated Yagi Array	292
7.5.2 Dielectric-loaded Slot Antenna	295
7.6 Dielectric-loaded Arrays	297
7.7 Dielectric-clad Discone Antenna	299
7.8 Dielectric-loaded Paraboloidal Antenna	299
7.9 Dielectric Leaky Wave Antennas	300
7.9.1 Dielectric Rod Leaky Wave Antenna	301
7.9.2 Horn Image-guide Leaky Wave Antenna	306
7.9.3 Leaky Wave Antenna Using Inverted Strip Dielectric Waveguide	311
7.10 Microstrip Patch Arrays with Spherical Dielectric Overlays	314
References	317

APPENDIX 1 - ANTENNA MEASUREMENTS

A1.1 Radiation Patterns	323
A1.2 Gain	326
A1.2.1 Comparison Method of Measurement of Gain	326
A1.2.2 Purcell's Absolute Method of Measurement of Gain	327
A1.3 Separation of Feed and Free End Terminal Patterns	329
A1.4 Impedance and Efficiency	332
A1.4.1 Measurement of Input Impedance of the Antenna together with the Mode Transducer	332
A1.4.2 Scattering Parameters of the Mode Transducer and the Dielectric Antenna	333
A1.4.3 Launching Efficiency and Input Impedance of Dielectric Antenna	337
References	340

APPENDIX 2 - SUMMARY OF DESIGN PERFORMANCE OF DIELECTRIC AND DIELECTRIC-LOADED ANTENNAS	341
APPENDIX 3 - LIST OF FIGURES WITH IEEE/IRE COPYRIGHT C	343
AUTHOR INDEX	345
SUBJECT INDEX	351
