Contents

Preface xv

1 INTRODUCTION 1

- 1.1 Microwave Frequency Range 1
- 1.2 Historical Resumé of Early Work on Microwaves 1
- 1.3 Correspondence between Field and Circuit Concepts 2
- 1.4 Applications of Microwaves 3
- 1.5 Special Advanced Topics 3 References 4

2 FUNDAMENTAL ELECTROMAGNETIC THEORY 5

- 2.1 Electric Charge and Coulomb's Law 5
- 2.2 Electric Intensity, Electric Displacement Density, and Electric Potential in Electrostatic Fields 5
- 2.3 Gauss' Law and Electric Flux 8
- 2.4 Poisson's and Laplace's Equations 9
- 2.5 Conductors and Dielectrics, and Electric Current and Conductivity 10
- 2.6 Capacitance and Stored Energy Density in Electrostatic Field 12
- 2.7 Ohm's Law, Resistance, and Conductance 14
- 2.8 Equation of Continuity, Conservation of Charge, and Relaxation Time 14
- 2.9 Static Magnetic Field of Steady Electric Current 16
- 2.10 Force on Current Element, Magnetic Flux Density 16
- 2.11 Force between Two Magnetic Poles or Two Current Elements, Coulomb's Law, and Permeability 17
- 2.12 Magnetic Flux over Closed Surface 18
- 2.13 Magnetic Field Intensity, Ampère's Law, and Magnetomotive Force 18
- 2.14 Magnetic Current, Magnetic Current Density, and Faraday's Law 19
- 2.15 Inductance and Flux Linkage 19
- 2.16 Stored Energy Density in Magnetic Field 20
- 2.17 Electric Displacement Current Density 21
- 2.18 Ampère's Law as Amended by Maxwell 22
- 2.19 Force on Charged Particle in Electric Field, Electron Volt 23
- 2.20 Force on Charged Particle in Magnetic Field 24
- 2.21 Electromotive Force Induced by Moving Conductor in Magnetic Field 25
- 2.22 Generalized Form of the First Law of Electromagnetic Induction or Faraday's Law 25
- 2.23 The Two Fundamental Electromagnetic Equations or Maxwell's Equations 26

- 2.24 Currents across Closed Surface 27
- 2.25 Boundary Conditions in Electromagnetic Field 29
- 2.26 Boundary Conditions in the Vicinity of Current Sheet 30
- 2.27 Conditions in the Vicinity of Infinitely Thin Linear Current Filaments 32
- 2.28 Energy Theorems, Poynting Vector 33
- 2.29 Normal and Surface Impedances of Surfaces 35
- 2.30 Primary and Secondary Electromagnetic Constants of a Medium 36
- 2.31 Electromagnetic Wave Equation in Dielectrics and Conductors 40
- 2.32 Solution of Wave Equation in Cartesian Coordinates in Homogeneous Dissipative and Nondissipative Regions: Uniform Plane Waves 41
- 2.33 Waves at Interface between Conductors and Dielectrics 45
- 2.34 Special Forms of Maxwell's Equations in Source-Free Regions in Different Systems of Coordinates 47
- 2.35 Field Produced by Given Distribution of Currents in Infinite Homogeneous Medium: Vector and Scalar Wave Potentials 48
- 2.36 Field of Electric Current Element 51
- 2.37 Radiation from Electric Current Element 55
- 2.38 Electromagnetic Field Produced by Given Distribution of Applied Electric and Magnetic Currents 56
- 2.39 Electromagnetic Field Produced by Impressed Currents Varying Arbitrarily with Time 57
- 2.40 Field of Electric Current Element Whose Current Varies Arbitrarily with Time
- 2.41 Reflection of Electromagnetic Field at Boundary Surface 58
- 2.42 Induction Theorem 59
- 2.43 Equivalence Theorem 60
- 2.44 Hertz Potentials 60
- 2.45 Electric and Magnetic Polarization Sources for Hertz Vector Potentials 61
- 2.46 Babinet's Principle 64

Problems 64

Suggested Reading 66

3 SOLUTION OF SCALAR AND VECTOR WAVE EQUATIONS 68

- 3.1 Solution of Electromagnetic Field Problems in Microwave Engineering 68
- 3.2 Methods of Solving Homogeneous Wave Equations 69
- 3.3 Solution of Scalar Wave Equation in Rectangular Coordinates 69
- 3.4 Solution of Vector Wave Equation in Rectangular Coordinates 70
- 3.5 Solution of Scalar Wave Equation in Cylindrical Coordinates 71
- 3.6 Solution of Vector Wave Equation in Cylindrical Coordinates 74
- 3.7 Solution of Scalar Wave Equation in Spherical Coordinates 76
- 3.8 A Fundamental Set of Solutions of Vector Wave Equation: General Method of Solution 78
- 3.9 Application of General Method of Solution of Vector Wave Equation to Cylindrical Coordinates 79
- 3.10 Solution of Vector Wave Equation in Spherical Coordinates 80

57

Problems 84

Suggested Reading 84

4 SURFACE WAVEGUIDES 85

- 4.1 Different Types of Surface Waveguides 85
- 4.2 Waves Supported by Plane Interface 86
- 4.3 Condition for Surface Waves along an Impedance Plane 90
- 4.4 Surface Waves along Conducting Plane with Thin Dielectric Coating 93
- 4.5 Circular Dielectric Waveguide 96
- 4.6 Circular Cylindrical Conductor as Transmission Line or Sommerfeld Line 102
- 4.7 Dielectric-Coated Conducting Cylinder or Goubau Line 106
- 4.8 Field Orthogonality of Surface-Wave Modes 109

Problems 110

Suggested Reading 110

5 SCATTERING AND IMPEDANCE MATRIX REPRESENTATION OF MICROWAVE JUNCTIONS 111

- 5.1 Scattering Matrix of Microwave Junction 111
- 5.2 Relationship between Scattering and Impedance Matrices of a Junction 113
- 5.3 Properties of Scattering Matrix of Lossless Junction 116
- 5.4 Scattering Matrix of Transmission Line 119
- 5.5 Three-Port Junction or T-Junction 120
- 5.6 Four-Port Microwave Junctions: Microwave Hybrid Junction 124
- 5.7 Directional Couplers 129
- 5.8 Transmission-Matrix Representation of Tandem Networks 134
- 5.9 Foster's Reactance Theorem 136
- 5.10 Even and Odd Properties of Input Impedance of One-Port Network 138
- 5.11 Two-Port Junctions 139
- 5.12 Coaxial Line to Waveguide Junction 143
- 5.13 Some Equivalent Circuits of Two-Port Junctions 144

Problems 146

Suggested Reading 148

6 WAVEGUIDE ELEMENTS AND COMPONENTS 149

- 6.1 General Considerations 149
- 6.2 Obstacles in Waveguide 150
- 6.3 Inductive Diaphragm 152
- 6.4 Capacitive Diaphragm 154
- 6.5 Thin Inductive Wire 155
- 6.6 Capacitive Tuning Screw 156
- 6.7 Resonant Irises 157
- 6.8 Diaphragms in Waveguides of Circular Cross-Section 158
- 6.9 Interaction between Two Diaphragms 160

X CONTENTS

- 6.10 Application of Babinet's Principle to Discontinuities in Waveguides 160
- 6.11 Excitation of Waveguide by Probe Coupling 162
- 6.12 Radiation from Linear Current Elements in Waveguide 167
- 6.13 Radiation from Current Loops in Waveguide 169
- 6.14 Small Apertures 170
- 6.15 Small Aperture in Transverse Waveguide Wall 172
- 6.16 Small Aperture in Broad Waveguide Wall 175
- 6.17 Theoretical Determination of Circuit Parameters of Bisected Capacitive Window 177
- 6.18 Waveguide Components 182
- 6.19 Waveguide Terminations 183
- 6.20 Waveguide Attenuators 185
- 6.21 Phase Changers 188
- 6.22 Directional Couplers 193
- 6.23 Other Types of Waveguide Components 199

Problems 199

Suggested Reading 200

7 MICROWAVE FILTERS 201

- 7.1 General Characteristics of Filters 201
- 7.2 Image-Parameter Method of Filter Design 202
- 7.3 Filter Design by Insertion-Loss Method 205
- 7.4 Maximally Flat Filter and Chebyshev Filter 207
- 7.5 Some Low-Pass Filter Designs Giving Maximally Flat and Chebyshev Responses 208
- 7.6 Frequency Transformations 211
- 7.7 Impedance Inverters or Quarter-Wave Transformers 216
- 7.8 Transmission-Line Filter 221
- 7.9 Quarter-Wave Coupled Cavity Filters 224
- 7.10 Direct-Coupled Cavity Filters 227

Problems 230

Suggested Reading 230

8 NONRECIPROCAL MICROWAVE DEVICES 232

- 8.1 Concept of Nonreciprocity 232
- 8.2 Scattering Matrix of Nonreciprocal Lossless Junction 233
- 8.3 Microwave Properties of Ferrites 235
- 8.4 Microwave Propagation in Ferrites 236
- 8.5 Permeability and Susceptibility Tensors in Ferrite Medium 242
- 8.6 Plane Wave Propagation in an Unbounded Ferrite Medium 244
- 8.7 Faraday Rotation 245
- 8.8 Propagation of Electromagnetic Waves in Waveguides Containing Ferrites 247
- 8.9 Modes in Ferrite-Loaded Waveguides 251

- xi CONTENTS Circular Waveguide Partially Filled with Ferrite 256 8.10 Quasi TE and Quasi TM Modes in Ferrite-Filled Waveguides: Perturbation 8.11 Method 257 8.12 Microwave Ferrite Devices and Their Applications 260 8.13 Ferrite Four-Port Circulator 264 8.14 Ferrite Three-Port Circulator 266 8.15 Other Applications of Ferrites in Microwave Devices 267 8.16 Single-Crystal Ferrimagnetic Resonators 268 8.17 Magnetically Tunable YIG Band-Pass Filters 270 YIG-Tuned Solid-State Oscillators 8.18 272 Problems 274 Suggested Reading 274 9 **MICROWAVE SEMICONDUCTOR ELECTRON DEVICES** 276 9.1 General Concept 276 9.2 Classification of Microwave Solid-State Devices 276 9.3 Classification Based on Device Behaviour 277 9.4 Classification Based on Device Structure 279 9.5 Ideal p-n Junction Diodes 282 9.6 Dynamic Junction Parameters of the Ideal p-n Junction Depletion-Layer Capacitance 287 9.7 Nonideal *p-n* Junctions 290 9.8 p-n Junction Transistors 294 9.9 Varactor Diodes 299 Applications of Varactor Diodes: Parametric Amplifiers and Up-Converters 9.10 300 9.11 Schottky-Barrier Diode Mixers and Detectors 307 9.12 p-i-n Diodes as Switches and Limiters 315 9.13 IMPATT and TRAPATT Microwave Oscillators 322 9.14 Gunn Devices 328 9.15 **BARITT Microwave Oscillators** 336 9.16 Step-Recovery Diode as Frequency Multiplier 341 9.17 Microwave Transistors 345 9.18 **Tunnel-Diode** Devices 348 9.19 Masers and Lasers 351 Problems 356 Suggested Reading 356 Appendix 358 10 MICROWAVE ANTENNAS 359 10.1
 - General Characteristics of Microwave Antennas 359
 - 10.2 Antenna Patterns: Gain Function 359
 - 10.3 Thin Linear Conducting Antenna with Sinusoidal Current Distribution 363
 - 10.4 Thin Linear Travelling-Wave Antenna 368

- 10.5 Loop Antenna 372
- 10.6 Antenna Arrays 378
- 10.7 Helical Antenna 382
- 10.8 Biconical Antenna 391
- 10.9 Slot Antennas 395
- 10.10 Horn Antennas 401
- 10.11 Radiation Patterns of Rectangular Horns 404
- 10.12 Approximate Expression for Radiation Pattern of Rectangular Horn, Using Huyghens' Principle 405
- 10.13 Gain of Rectangular Horn 408
- 10.14 Reflector Antennas 411
- 10.15 Parabolic Reflector 414
- 10.16 Lens Antennas 419
- 10.17 Delay Lens 421
- 10.18 E-Plane Metal Plate Lens 424
- 10.19 H-Plane Metal Plate Lens 425
- 10.20 Leaky-Wave Antennas 426
- 10.21 Surface-Wave Antennas 428

10.22Frequency-Independent or Broad-Band Antennas430Problems433

Suggested Reading 435

11 MICROWAVE COMMUNICATION 437

- 11.1 Principles of Communication 437
- 11.2 Various Types of Microwave Radio Communication Systems 439
- 11.3 Line of Sight Systems (Ground based) 439
- 11.4 Troposcatter Microwave Systems 447
- 11.5 Ground-Wave Propagation 449
- 11.6 Tropospheric Wave Propagation 452
- 11.7 Sky-Wave or Ionospheric Propagation 454
- 11.8 Microwave Absorption in Atmospheric Gases 458
- 11.9 Noise in Microwave Communication Systems 459
- 11.10 Radar System 463

Problems 468

Suggested Reading 469

12 MICROWAVE MEASUREMENTS 470

- 12.1 Concepts of Microwave Measurements 470
- 12.2 Fundamental Characteristics of Hollow Metal Waveguides 470
- 12.3 Guide Wavelength 470
- 12.4 Characteristic Wave Impedance of Waveguide 471
- 12.5 Standing Wave Patterns 471
- 12.6 Standing Wave Indicator 473

- 12.7 Standing Wave Measurements 473
- 12.8 Calibration of Crystal Detector (Experiment 1) 473
- 12.9 Location of Standing Wave Minima 475
- 12.10 Measurement of Guide Wavelength (Experiment 2) 475
- 12.11 Measurement of Low VSWR (Experiment 3) 475
- 12.12 Measurement of High VSWR (Experiment 4) 476
- 12.13 Errors in Standing Wave Measurements 476
- 12.14 Errors due to Frequency Instability 476
- 12.15 Errors due to Standing Wave Indicator 477
- 12.16 Measurement of Impedance with Slotted Line (Experiment 5) 479
- 12.17 Measurement of Equivalent Circuit Parameters of Microwave Discontinuity Structures 480
- 12.18 Three-Point Method of Measurement of Equivalent Circuit Parameters (Experiment 6) 480
- 12.19 Deschamp's Method of Measurement of Scattering Parameters (Experiment 7) 481
- 12.20 Tangent Method of Measurement of Equivalent Circuit Parameters (Experiment 8) 484
- 12.21 Characteristics of Diaphragms in Waveguides (Experiment 9) 487
- 12.22 Waveguide Junctions (Experiment 10) 489
- 12.23 Hybrid E-H Junction 489
- 12.24 Magic Tee 490
- 12.25 Directional Coupler (Experiment 11) 491
- 12.26 Dielectric Properties of Materials 493
- 12.27 Waveguide Method of Measuring Dielectric Properties of Materials (Experiment 12) 493
- 12.28 Interferometer Method of Measurement of Dielectric Properties (Experiment 13) 494
- 12.29 Cavity Perturbation Method of Measuring Dielectric Properties of Materials 496
- 12.30 Properties of Microwave Ferromagnetic Materials 497
- 12.31 Waveguide Short-Circuit and Open-Circuit Impedance Method of Measuring Properties of Microwave Ferromagnetic Materials (Experiment 14) 498
- 12.32 Cavity Perturbation Method of Measurement of Properties of Microwave Ferromagnetic Materials 499
- 12.33 Magnetic Susceptibility Tensor in Ferromagnetic Material (Experiment 15) 500
- 12.34 Line Width of Single Crystals (Experiment 16) 503
- 12.35 Q-Factor of Cavity Resonator 505
- 12.36 Standing-Wave Detector Method of Q-Factor of Cavity Resonator (Experiment 17) 506
- 12.37 Attenuation Constant 507
- 12.38 Standing-Wave Method of Measurement of Attenuation Constant (Experiment 18) 507
- 12.39 Attenuation Constant of Attenuator (Experiment 19) 508
- 12.40 Measurement of Electromagnetic Field 508

- 12.41 Theory of Vibration Spiral 508
- 12.42 Measurement of Diffracted Fields (Experiment 20) 510
- 12.43 Measurement of Scattered Field 514
- 12.44 Measurement of Back-Scattering Cross-Section (Experiment 21) 514
- 12.45 Measurement of Radiation Field 516
- 12.46 Free-Space Measurements of Electromagnetic Field 516
- 12.47 Radiation Pattern of Dielectric Rod Aerials (Experiment 22) 518
- 12.48 Measurement of Phase of Electromagnetic Field (Experiment 23) 519
- 12.49 Measurement of Antenna Gain 520
- 12.50 Sommerfeld and Harms-Goubau Surface-Wave Line 522
- 12.51 Surface-Wave Field 522
- 12.52 Attenuation Constant of Sommerfeld Line 523
- 12.53 Attenuation Constant of Harms-Goubau Line 523
- 12.54 Measurement of Q of Harms-Goubau Resonator (Experiment 26) 524
- 12.55 Measurement of Attenuation Constant of Harms-Goubau Line (Experiment 27) 525
- 12.56 Measurement of Radial Variation of Magnetic Field of Harms-Goubau Line (Experiment 28) 526
- 12.57 Microwave Plasma Diagnostics 526
- 12.58 Measurement of Electron Density in Plasma (Experiment 29) 526
- 12.59 Measurement of Collision Frequency of Plasma 527
- 12.60 Characteristics of Reflex Klystrons 527
- 12.61 Mode Curve of Reflex Klystrons 528
- 12.62 Experimental Determination of Mode Curve and Electronic Frequency Tuning Curve of Reflex Klystron (Experiments 30, 31) 529
- 12.63 Rieke Diagram of Reflex Klystron (Experiment 32) 529
- 12.64 Measurement of Power 531
