Preface	xi
Chapter 1 Basic Theory	1
1.1 Introduction	1
1.2 Analysis of an infinite periodically loaded waveguide	2
1.3 Impedance relationships	4
1.4 Characteristics of evanescent mode resonators	6
1.5 Fields in the guide	6
1.6 Q of an evanescent mode resonator	9
References	11
Chapter 2 Waveguide Obstacles	13
2.1 Introduction	13
2.2 The “capacitive” iris	13
2.3 Inductive iris	16
2.4 Resonant iris	18
2.5 Capacitive posts	18
2.6 The capacitive strip	20
2.7 Dielectric strips	22
2.8 Dielectric posts	23
2.9 Inductive post	24
2.10 Triplet capacitive posts	25
2.11 Slots	26
2.12 Reflection coefficient in cutoff guides	26
2.13 Comment	27
References	28
Chapter 3 Filters	31
3.1 Introduction	31
3.2 Design theory	32
3.2.1 Filters beginning with a series resonator	35
3.3 Loop coupling	38

3.4	Approach to design programs	40
3.5	Approximations in the theory	41
3.6	Temperature compensation	44
3.7	Parasitic passbands	44
3.8	Performance	46
	References	50

Chapter 4 Advanced Filters 51

4.1	Introduction	51
4.2	Inductive loading	51
4.2.1	Design theory	52
4.2.2	Performance	54
4.3	Diplexers and multiplexers	57
4.3.1	Design theory	57
4.3.2	Design summary	62
4.3.3	Performance	62
4.4	Directional filters	65
4.4.1	Introduction	65
4.4.2	Types of directional filters	65
4.4.3	Dual-mode evanescent mode directional filter	66
4.4.4	Performance	68
4.5	Directional filters employing two filters	71
4.5.1	Design conditions	72
4.5.2	Performance	75
4.6	Elliptic function filters	75
4.6.1	Design theory	78
4.6.2	Performance	81
	References	83

Chapter 5 Additional Components 85

5.1	Introduction	85
5.2	Diode mounts	85
5.2.1	Image-terminated mixers	86
5.3	Impedance transformers	89
5.3.1	Multisection transformers	89
5.4	Hybrid-Ts and directional couplers	92
5.4.1	Hybrid-T	92
5.4.2	Directional couplers	94
5.5	Transitions to other media	95
	References	99

Chapter 6	Ferrite-loaded Devices in Waveguides Below Cutoff	101
6.1	Introduction	101
6.2	Magnetically tunable bandpass filter	101
6.2.1	Design theory	102
6.2.2	Filter design principles	105
6.2.3	Experimental filter	107
6.3	T-R switch	109
6.4	Circulators	113
	References	119
Chapter 7	Antenna Elements	121
7.1	Introduction	121
7.2	Design theory	121
7.3	Broader-band units	125
7.4	Frequency-scan antenna	128
	References	132
Chapter 8	Complete Subsystems	133
8.1	Introduction	133
8.2	Frequency multipliers	133
8.3	Microwave receiver	136
8.4	Marecs diplexer	137
8.5	Microwave link up-converter	139
8.6	Parametric amplifier	142
8.7	Filter-equalizer	146
8.8	Additional subsystems	146
	References	147
Chapter 9	Measurements	149
9.1	Introduction	149
9.2	Mok's method	149
9.3	Insertion loss	151
9.4	Poles and zeros	152
9.5	Complete networks	155
9.5.1	Measurement techniques	159
	References	161
Index		163
