CONTRIBUTORS xii

1 OPTICAL WAVE PROPAGATION 1

Andrew K. Chan

1.1 Introduction and Organization of the Chapter 1

1.2 Electromagnetic Wave Propagation 2

1.3 Geometrical Optics 14

1.4 Propagation of Gaussian Beam 28

1.5 Diffraction 38

References 49

2 INFRARED TECHNIQUES 50

Peter N. Kupferman

2.1 Introduction 50

2.2 Definition of the Infrared 50

2.3 History of Infrared Detectors 54

2.4 Device Physics 57

2.5 Mercury Cadmium Telluride 62

2.6 Indium Antimonide 73

2.7 Schottky-Barrier Detectors 78

2.8 Sprite Detectors 86

2.9 Pyroelectric Detectors 90

2.10 Extrinsic Silicon 94

2.11 Systems Analysis 97

References 100

3 OPTICAL LENSES 102

John R. Rogers

3.1 Introduction 102

3.2 First-Order Optics 105

3.3 Aberrations 120

3.4 Real Ray-Trace Techniques	137
3.5 Diffraction Effects	141
3.6 Modular Optical Design	145
References	147
4 OPTICAL RESONATORS	148
Kenichi Iga	
4.1 Introduction	148
4.2 Waveguide-Type Fabry-Perot Resonators	149
4.3 Gaussian Beams and Propagation Matrices	155
4.4 Fabry-Perot Open Resonators with Concave Mirrors	161
4.5 Distributed Feedback/Reflector Resonators	173
4.6 Summary	180
References	181
5 SPATIAL FILTERS AND FOURIER OPTICS	182
Francis T. S. Yu	
5.1 Introduction	182
5.2 Fresnel-Kirchhoff Theory and System Transforms	182
5.3 Analysis of Coherent and Incoherent Optical Systems	187
5.4 Coherent Optical Processing	192
5.5 Complex Spatial Filter Synthesis	195
5.6 Partially Coherent Optical Processing	197
5.7 White Light Optical Processing	200
5.8 Source Encoding and Image Sampling	202
5.9 Real-Time Optical Processing	204
5.10 Concluding Remarks	211
References	211
6 SEMICONDUCTOR LASERS	213
Luis Figueroa	
6.1 Introduction	213
6.2 Applications of Semiconductor Lasers	214
6.3 Basic Operation	215
6.4 Stripe Geometry and Current Confinement Techniques	226
6.5 Concepts of High-Power Operation	233
6.6 Important Commercial High-Power Diode Lasers	247
6.7 Future Directions for High-Power Lasers	259
6.8 GaInAsP/InP (1.3- μm) Semiconductor Lasers	265
6.9 Semiconductor Laser Arrays	270
6.10 Surface-Emitting Semiconductor Lasers	290
6.11 Modulation of Semiconductor Lasers at Gigahertz Rates	295
6.12 Quantum Well Semiconductor Lasers	308
6.13 Conclusion	315
References	316

7 SOLID-STATE LASERS 323

John McMahon

7.1 Introduction 323

7.2 Excitation of Solid-State Lasers 329

7.3 Laser Oscillators 340

7.4 Laser Amplifiers 354

7.5 Optical Modulators 368

7.6 Systems Strategies for Oscillator-Amplifier Laser Systems 375

7.7 Average Power Effects 380

7.8 Miscellaneous Topics 385

References 393

8 LIQUID LASERS 399

B. Wilhelmi and F. Weidner

8.1 Introduction 399

8.2 Parameters of the Active Media. Comparison with Other Lasers 400

8.3 Excitation of the Active Medium, Frequency Selection, and Tuning 415

8.4 Operational Principles, Design, and Parameters of Liquid Lasers 422

References 445

9 GAS LASERS 451

T. Lehecka, N. C. Luhmann, Jr., W. A. Peebles, J. Goldhar, and S. P. Obenschain

9.1 Introduction 451

9.2 Far-Infrared Lasers 481

9.3 Excimer Lasers 563

References 585
