1. MOLECULAR BEAM EPITAXY AND ITS APPLICATION TO MICROWAVE AND OPTICAL DEVICES 1

Pallab Bhattacharya and Jasprit Singh

1.1 Introduction 1

1.2 Heterostructure Fabrication by Molecular Beam Epitaxy 1

1.3 Deep Level Effects in MBE-Grown Materials and Heterostructures 13

1.4 Effects due to Alloy and Heterointerface Quality 25

1.5 Materials Properties and Device Characteristics 34

References 53

2. MIXERS AND DETECTORS 57

Erik L. Kollberg

2.1 Introduction 57

2.2 Some Common Detector and Mixer Devices 57

2.3 Optimization of Diode Detectors 71

2.4 Mixers: Simple Theory and Basic Definitions 75

2.5 Theoretical Modeling of Schottky Barrier Mixers 83

2.6 Single and Multiple Diode Mixers 91

2.7 Intermodulation in Microwave Mixers 97

2.8 Practical Implementation of Microwave Mixers 101

2.9 Practical Implementation of Millimeter Wave Schottky Barrier Mixers 107

2.10 Submillimeter Wave Schottky Diode Mixers 112

2.11 Superconducting Millimeter Wave Mixers 118

2.12 FET Mixers 123

2.13 Further Aspects on Microwave and Millimeter Wave Mixers 130

References 135

3. MULTIPLIERS AND PARAMETRIC DEVICES 142

J. W. Archer and R. A. Batchelor

3.1 Introduction 142

3.2 Manley-Rowe Relationships 143

3.3 Practical Nonlinear Reactance Devices 144

3.4 Multiplier Design Using Varactor Diodes	153
3.5 Multipliers Using Step Recovery Diodes	170
3.6 Parametric Amplifiers and Varactor Frequency Converters	179
References	188
4. SEMICONDUCTOR CONTROL DEVICES: PIN DIODES	192
Joseph F. White	
4.1 The PIN Diode—An Extension of the PN Junction	192
4.2 Microwave Equivalent Circuit	199
4.3 High RF Power Limits	223
References	228
5. SEMICONDUCTOR CONTROL DEVICES: PHASE SHIFTERS AND SWITCHES	230
Ron Stockton and Ajay I. Sreenivas	
5.1 Introduction	230
5.2 Loaded-Line Phase Shifters	230
5.3 Reflection Phase Shifter	240
5.4 Switched-Line Phase Shifters	246
5.5 High-Pass Low-Pass Phase Shifter	251
5.6 Analog Phase Shifters	255
5.7 Miscellaneous Considerations	256
References	260
6. TRANSFERRED ELECTRON DEVICES	263
Cheng Sun	
6.1 Introduction	263
6.2 Negative Differential Mobility	264
6.3 Modes of Operation for Oscillators	267
6.4 Modes of Operation for Amplifiers	273
6.5 Equal-Area Rule	274
6.6 Equivalent-Circuit Models	277
6.7 Microwave Circuits	281
6.8 Power Combining	289
6.9 Epitaxial Material Growth and Device Fabrication	293
6.10 Concussions and Future Trends	298
References	301
7. IMPATT AND RELATED TRANSIT-TIME DIODES	305
Kai Chang and H. John Kuno	
7.1 Introduction	305
7.2 Device Physics and Modeling	306
7.3 Device Design and Fabrication	316
7.4 Oscillators	333
7.5 Power Amplifiers	347
7.6 Power Combiners	355
7.7 IMPATT Diode for Frequency Multiplication and Conversion	367
7.8 Noise Characteristics and Spurious Oscillations	368
7.9 Related Transit-Time Devices (BARITT, TRAPATT, TUNNETT, and MITTAT)	373

7.10 Other Devices	379
7.11 Summary and Future Trends	383
References	384
8. MICROWAVE SILICON BIPOLAR TRANSISTORS AND MONOLITHIC INTEGRATED CIRCUITS	392
Craig P. Snapp	
8.1 Introduction	392
8.2 Bipolar Transistor Structure and Modeling	396
8.3 Discrete Transistor Design and Performance	403
8.4 Monolithic Microwave Integrated Circuits	413
8.5 Projections	432
References	434
9. HIGH-ELECTRON-MOBILITY TRANSISTORS: PRINCIPLES AND APPLICATIONS	437
Jacques Zimmerman and Georges Salmer	
9.1 Introduction	437
9.2 Principle and Model of the HEMT	438
9.3 Small-Signal Equivalent Circuit (SSEC)	445
9.4 Technology of the HEMT	447
9.5 Physical Analysis of the HEMT	450
9.6 Low-Temperature Behavior	456
9.7 Low-Noise Amplification	459
9.8 Power Amplification	465
9.9 New HEMT Structures	469
9.10 Conclusion	475
References	476
10. FETS: POWER APPLICATIONS	479
Hing-Loi A. Hung, Thane Smith, and Ho-Chung Huang	
10.1 Introduction	479
10.2 Status of Power FETs and Amplifiers	480
10.3 Power FET Modeling	482
10.4 Power FET Designs	497
10.5 Matching Circuit Designs	503
10.6 Fabrication Processes	518
10.7 Measurement Techniques	523
10.8 Thermal Considerations	529
10.9 Packaging Design	531
10.10 Reliability and Radiation Effects	533
10.11 Conclusions	534
Appendix A Examples of Solving Networks for Node Voltages	535
Appendix B Examples of Solving the Network Using the Matrix Method	537
Appendix C Sample Run of the FLATIDSS Program	541
Appendix D Description of Computer Subprograms for Generating Device and Performance Parameters	543
References	544

11. FETS: LOW-NOISE APPLICATIONS	550
Thomas A. Midford	
11.1 Introduction	550
11.2 Low-Noise MESFET Device Physics	552
11.3 Noise Performance and Models	560
11.4 Low-Noise MESFET Design and Fabrication	571
11.5 Low-Noise Amplifier Design	591
11.6 Conclusions and Outlook	607
References	608
INDEX	615
