Preface	xiii
Chapter 1 Introduction to the Technology of Microwave Integrated Circuits	1
1.1 Definitions and Representations of Microwave Integrated Circuits	1
1.2 Fields of Application and Limitations	11
1.3 Circuit Examples	12
1.4 Substrates	20
1.4.1 Criteria for the Choice of Substrate Material	20
1.4.2 Survey of Substrate Material	23
1.4.3 Aluminum Oxide Ceramic	28
1.4.4 Measurements of the Relative Permittivity and Loss Factor of Substrates	31
1.4.5 Matching of Ceramic Substrates	37
1.5 Production Methods (Technology) for MICs	38
1.5.1 Introduction	38
1.5.2 Etching Technology Laminated Plastic Plates	38
1.5.3 Thin-Film Hybrid Circuits	41
1.5.4 Thick-Film Hybrid Circuits	59
1.5.5 Semiconductor-Sapphire Technology	61
1.5.6 Monolithic MICs	63
1.6 Packaging and Electrical Connections	75
1.6.1 Package Requirements	75
1.6.2 Construction of High Frequency Transitions	76
1.6.3 Housing Techniques	78
1.6.4 Electrical Explanation of Microstrip-Coaxial Transitions	80
1.6.5 Measurement of the Reflection Coefficients of Transitions	84
1.6.6 Special Forms of Transitions	86
1.7 Components for Microwave Integrated Circuits	88

1.7.1	Stripline	88
1.7.2	Circuit Components for Microstrip Circuits	91
Chapter 2	General Stripline Characteristics	95
2.1	Modes on Stripline	95
2.1.1	Review	95
2.1.2	TEM Lines and TEM Modes	95
2.1.3	Quasi-TEM Lines and Quasi-TEM Modes	96
2.1.4	Planar Lines with General Hybrid Modes (Nonquasi-TEM Modes)	99
2.2	Approximation: Slightly Lossy TEM Lines	99
2.3	Static (TEM) Approximation for Striplines with Inhomogeneous Dielectrics	103
2.3.1	Characteristic Impedance and Phase Velocity	103
2.3.2	Effective Permittivity	105
2.3.3	Dielectric Filling Factor	106
2.4	Losses of Strip Transmission Lines with Inhomogeneous Dielectrics Using the Static Approximation	109
2.4.1	Introduction	109
2.4.2	Skin Effect	109
2.4.3	Conductor Losses	111
2.4.4	Dielectric Losses	116
2.4.5	Leakage Losses	117
2.5	Approximations for the Static Analysis of Quasi-TEM Lines	118
2.5.1	Review	118
2.5.2	Modified Conformal Representation Allowing for Dielectric Edges	119
2.5.3	Method of Superposition of Partial Capacitances	121
2.5.4	Conversion of Circuit Parameters for Other Substrate Permittivities	122
2.6	Characteristic Impedance Definition for Quasi-TEM Lines	124
2.6.1	Introduction	124
2.6.2	Characteristic Impedance Definitions from Current, Voltage, and Power	125
2.6.3	Other Characteristic Impedance Definitions	127
2.7	Scaling Rules for Linear Increase of Circuit Dimensions	128
2.7.1	Linear Increase in Circuit Cross Section	128
2.7.2	Linear Expansion of Three-Dimensional Conductor Structures	133
Chapter 3	Transmission-Line Parameters for Microstrip with an Isotropic Dielectric Substrate	135

3.1	Introduction	135
3.2	Characteristic Impedance and Effective Permittivity Using the Static Approximation	138
3.2.1	Numerical Static Analysis of Microstrip	138
3.2.2	Equations for the Characteristic Impedance and Effective Permittivity for Zero Strip-Conductor Thickness	144
3.2.3	Characteristic Impedance of Microstrip without Substrate for Zero Transmission-Line Thickness	152
3.2.4	Transmission-Line Parameters of Microstrip Including Finite Conductor Thickness	154
3.2.5	Static Planar Waveguide Model for Microstrip	160
3.3	Characteristic Impedance and Effective Permittivity by Using the Hybrid-Mode Analysis	162
3.3.1	Hybrid-Mode Analysis by Using Numerical Methods	162
3.3.2	Various Characteristic Impedance Definitions in Dynamic Analyses	163
3.3.3	Dispersion Equations for the Effective Permittivity Dispersion Model	167
3.3.4	Dynamic Planar Waveguide Model for Microstrip	174
3.3.5	Dispersion Model for the Characteristic Impedance	175
Chapter 4	Higher Order Modes on Microstrip	181
4.1	Introduction	181
4.2	Higher Order Modes from the Coplanar Waveguide Model	183
Chapter 5	Effects of Metallic Enclosure on the Transmission Parameters of Microstrip Transmission Lines	189
5.1	Effect of the Conductive Cover	189
5.2	Effect of Housing Side Walls	189
Chapter 6	Losses in Microstrip	193
6.1	Conductor Losses	193
6.1.1	Introduction	193
6.1.2	Attenuation Equations According to the Incremental Inductance Rule	194
6.1.3	Asymptotic Value for Conductor Attenuation Coefficient for Large Conductor Widths	196
6.1.4	Influence of the Adhesive Layer on the Conductor Losses	196
6.1.5	Influence of Substrate Surface Roughness on Conductor Losses	198

6.2	Dielectric Losses	200
6.3	Leakage Losses	201
Chapter 7 Measurement of Transmission-Line Parameters in Microstrip Lines		205
7.1	Introduction	205
7.2	Ring Resonator Method	205
7.3	Straight Resonator Method	208
7.4	Other Measurement Methods	210
Chapter 8 Microstrip Transmission Lines on Anisotropic Dielectric Substrates		213
8.1	Introduction	213
8.2	Permittivity Tensor for Anisotropic Dielectric Substrates	214
8.3	Microstrip Transmission Lines on Uniaxial Anisotropic Substrate with the Principal Axis Perpendicular to the Substrate Surface	216
8.3.1	Static Approximation of Guided Modes	216
8.3.2	Equivalent Transformation for Static Transmission-Line Parameters	217
8.3.3	Dispersion with Sapphire as Substrate	220
8.4	Generalized Equivalent Transformation for Static Analysis: General Expression for Any Principal Axis Orientation	223
Chapter 9 Coupled Microstrip on Dielectric Substrate		225
9.1	Introduction	225
9.2	Transmission-Line Parameters Using the Static Approximation	227
9.2.1	Relations between the Primary Transmission- Line Constants and the Line Parameters	227
9.2.2	Transmission-Line Parameters Determined by Static Numerical Analysis	233
9.2.3	Conversion of Transmission-Line Parameters for Different Substrate	240
9.2.4	Asymptotic Behavior of Transmission-Line Parameters	240
9.2.5	Equations for Static Transmission-Line Parameters	242
9.3	Frequency Dependence of Transmission-Line Parameters (Hybrid-Mode Analysis)	245
9.3.1	Transmission-Line Parameters from Numerical Hybrid-Mode Analysis	245
9.3.2	Dispersion Equations	247

9.4	Transfer Characteristics of a Microstrip Transmission Line	248
9.4.1	Ideal Reverse Directional Coupler (TEM Coupler)	248
9.4.2	General Scattering Parameters of a Nonideal Coupling Section with Inhomogeneous Dielectric for Arbitrary Terminations	252
9.4.3	Microstrip Coupler Section Operating as Quasireverse-Directional Coupler (Quasi-TEM Coupler)	254
9.5	Modified Microstrip Coupling Section for Higher Coupling and Improved Directivity	260
9.5.1	Modified Coupling Section Suitable for 3 dB Couplers	260
9.5.2	Weakly Coupled Sections with Increased Directivity	261
9.6	Distortion of Directivity and Reflection Coefficients of Directional Couplers Due to Reflections at Transitions	264
Chapter 10 Microstrip Discontinuities		267
10.1	Introduction	267
10.2	Open-Ended Microstrip	268
10.2.1	Electrical Behavior, Analysis Methods	268
10.2.2	Design Equations	270
10.3	Step in Conductor Width	272
10.3.1	Electrical Behavior, Analysis Methods	272
10.3.2	Static Analysis of the Original Structure	274
10.3.3	Hybrid-Mode Analysis with the Planar Waveguide Model Using the Fundamental Mode	275
10.3.4	Accounting for the Fringing Electric Fields in Analysis of the Planar Waveguide Model	278
10.3.5	Dynamic Analysis with the Planar Waveguide Model Including Higher Order Modes	279
10.3.6	Special Shapes of Changes in Conductor Width	281
10.4	Symmetrical Right-Angle T-Junctions	282
10.4.1	Electrical Behavior, Static Analysis of Original Structure	282
10.4.2	Hybrid-Mode Analysis with the Planar Waveguide Model for the Fundamental Mode	284
10.4.3	Hybrid Mode with the Planar Waveguide Model for Higher Order Modes	288
10.4.4	Special Shapes of T-Junctions	289

10.5	Bends	290
10.5.1	Electrical Behavior, Compensation Methods	290
10.5.2	Right-Angle Bend without Corner Chamfering (Uncompensated)	292
10.5.3	Compensated Right-Angle Bend	293
10.5.4	Special Shapes of Bends	296
10.6	Short Circuits	298
10.6.1	Electrical Behavior, Equivalent Circuits	298
10.6.2	Analysis Using the Planar Waveguide Model	301
10.6.3	Special Shape of Short Circuits	305
10.7	A Gap in the Strip Conductor	306
Chapter 11	Radiation from Microstrip Circuits	311
11.1	Introduction	311
11.2	Radiation from Strip Discontinuities and Transitions	313
11.2.1	Radiated Power of Various Discontinuities	313
11.2.2	Radiation Conductances and Resistances	317
11.2.3	Radiation from Transitions	319
11.2.4	Further Radiation Calculations for an Open Circuit	320
11.3	Radiation from Resonators and Antennas	321
11.3.1	Radiation from Transmission-Line Resonators	321
11.3.2	Radiation from Disk Resonators and Antennas	323
Chapter 12	Microstrip-Line Variations	325
12.1	Microstrip with Tuning Septa	325
12.2	Shielded Microstrip Line	328
12.3	Symmetrical Double-Strip Transmission Line	331
12.4	Suspended-Substrate Lines	332
12.4.1	Single-Strip Suspended-Substrate Lines	332
12.4.2	High- Q Strip Transmission Line (Dielectric Supported Air Strip Transmission Line)	333
12.4.3	Special Forms of Suspended-Substrate Lines	336
12.5	Stripline	337
12.5.1	Characteristic Impedance of Single Stripline	337
12.5.2	Losses of Single Stripline	342
12.5.3	Further Problems	343
12.5.4	Special Forms of Stripline	345
12.5.5	Edge-Coupled Striplines	346
12.6	Symmetrically Shielded Stripline	349
Chapter 13	Coplanar Transmission Lines	351
13.1	Coplanar Waveguide (with Infinitely Wide Ground Conductors)	351

13.1.1	Introduction	351
13.1.2	Transmission-Line Parameters for Infinite Substrate Thickness	352
13.1.3	Transmission-Line Parameters for Finite Substrate Thickness	353
13.1.4	Losses	357
13.1.5	Special Types of Coplanar Waveguides	359
13.2	Coplanar Waveguide with Finitely Wide Ground Conductors	359
13.3	Symmetrical Double-Strip Coplanar Waveguide	362
13.3.1	Introduction	362
13.3.2	Transmission-Line Parameters for Infinite Substrate Thickness	363
13.3.3	Transmission-Line Parameters for Finite Substrate Thickness	364
13.3.4	Losses	367
13.4	Double-Strip Coplanar Waveguide with Infinitely Wide Ground Conductors	368
13.5	Asymmetrical Double-Strip Coplanar Waveguide	370
13.6	Auxiliary Curves of Elliptical Integrals for Use in Determining Coplanar and Strip Transmission-Line Parameters	373
Chapter 14	Slotline	377
14.1	Slot Mode Properties and Transmission-Line Parameters	377
14.2	Losses	383
14.3	Frequency Dependence of Lateral Field Penetration	384
14.4	Special Forms of Slotlines and Slotline Components	387
Chapter 15	Spurious Modes in Strip Transmission-Line Circuits	389
15.1	Surface Waves in Uncovered Microstrip Circuits	389
15.1.1	Introduction	389
15.1.2	Discontinuity Coupling	389
15.1.3	Characteristics of Surface Waves	390
15.1.4	Synchronous Coupling	391
15.1.5	Suppression of Surface Waves	393
15.2	Waveguide Modes in Enclosed Microstrip Circuit Housings	394
15.2.1	Review of Parasitic Waveguide Modes	394
15.2.2	LSM Modes in a Circuit Housing	396
15.2.3	Cavity Resonances of LSM Modes	398
15.2.4	Cavity Resonances of the Fundamental LSE Mode	398

15.2.5	Suppression of Cavity Resonances, Effect of Strip Conductors	399
15.3	Waveguide Modes in Enclosed Suspended-Substrate Circuit	400
	Glossary	405
	Bibliography	421
	Index	511
