

CONTENTS

| | |
|--|----|
| List of Principal Symbols | 13 |
| 1 Introduction | 15 |
| 2 Principle of Complex Permittivity Measurement in Free Space | 22 |
| 2.1 Interaction of Plane Electromagnetic Wave with Infinite Plane-Parallel Plate of a Dielectric Medium | 23 |
| 2.1.1 Reflection Method of Complex Permittivity Measurement | 26 |
| 2.1.2 Transmission Method of Complex Permittivity Measurement | 26 |
| 2.2 Interaction of Plane Electromagnetic Wave with Plane-Parallel Plate of a Dielectric Medium Placed in a Transparent Container | 27 |
| 3 Focussing of Microwave Energy | 32 |
| 3.1 Unfocussed Microwave Beams | 33 |
| 3.1.1 Dielectric Lens Design | 33 |
| 3.1.2 Microwave Antenna Radiation Pattern | 35 |
| 3.1.2.1 Width of the Radiation Pattern Produced by In-phase Illuminated Aperture in the Fraunhofer Region | 38 |
| 3.1.2.2 Typical Electromagnetic Field Distribution Measured in Front of In-phase Illuminated Circular Aperture | 40 |
| 3.2 Focussed Microwave Beams | 44 |
| 3.2.1 Structure of Electromagnetic Field in a Focussed Beam Produced by an Antenna with Circular Aperture | 45 |
| 3.2.1.1 Distribution of Electric Field Strength in the Focal Plane $z = 0$ | 48 |
| 3.2.1.2 Distribution of Electric Field Strength in Planes $z' = \text{const}$ | 50 |
| 3.2.1.3 Phase Distribution in Planes $z' = \text{const}$ | 53 |
| 3.2.1.4 Phase Distribution along the Focal Axis $\rho' = 0$ | 54 |
| 3.2.1.5 Comparison of Theory with Experiment | 57 |
| 3.2.1.6 Summary of Basic Properties of Focussed Beams | 58 |
| 3.3 Dielectric Waveguides | 60 |
| 3.3.1 Modes Existing in an Infinite Dielectric Cylinder | 61 |
| 3.3.2 Basic Properties of Hybrid Modes | 65 |
| 3.3.3 Complex Permittivity Measurements in Dielectric Waveguides | 68 |

| | |
|--|-----------|
| 4 Methods of Measuring Phase and Amplitude of Probing Plane Electromagnetic Wave | 71 |
| 4.1 Determination of Transmission, Reflection and Absorption of Probing Wave | 71 |
| 4.2 Microwave Interferometry | 72 |
| 4.2.1 Function of Microwave Interferometer | 73 |
| 4.2.1.1 Evaluation of Phase Shift and Amplitude of Probing Wave | 74 |
| 4.2.1.2 Phase Sensitivity of the Method | 77 |
| 4.2.2 Interferometer with Phase Modulation | 80 |
| 4.2.3 Polar Display Interferometer | 83 |
| 4.3 Errors of Measurement | 87 |
| 5 Measurement of Basic Plasma Parameters | 92 |
| 5.1 Complex Permittivity Tensor of a Hot Magnetoactive Plasma | 96 |
| 5.1.1 Tensor $\epsilon_{ij}(\omega, \mathbf{k})$ at Weak Spatial Dispersion | 100 |
| 5.1.2 Tensor $\epsilon_{ij}(\omega, \mathbf{k})$ at Weak Spatial Dispersion with Considering the Effect of Collisions | 103 |
| 5.2 Dispersion Relations and Polarization of h. f. Waves in an Unbounded Hot Magnetoactive Plasma | 105 |
| 5.2.1 Electromagnetic Waves in a Hot Magnetoactive Plasma | 106 |
| 5.2.2 Basic Properties of High-Frequency Electromagnetic Waves | 108 |
| 5.2.2.1 Propagation in the Direction of Magnetic Field $\theta = 0^\circ$ | 111 |
| 5.2.2.2 Propagation in the Direction Perpendicular to Magnetic Field $\theta = 90^\circ$ | 112 |
| 5.2.2.3 Resonance and Cut-off of Transverse h.f. Waves Propagating along ($\theta = 0^\circ$) and across ($\theta = \pi/2$) the Magnetic Field | 113 |
| 5.3 Determination of Basic Plasma Parameters by means of Transverse Electromagnetic Waves Propagating in the Direction of External Magnetic Field | 114 |
| 5.3.1 Measurement of Plasma Electron Density | 115 |
| 5.3.2 Measurements of Collision Frequency and Electron Temperature | 118 |
| 5.3.2.1 RHCP Wave Absorption Due to Collisions: $v/\omega \gg (v_T/c)n$ | 119 |
| 5.3.2.2 Collisionless Absorption of a RHCP Wave: $v/\omega \ll (v_T/c)n$ | 120 |
| 5.3.2.3 Principle of Plasma Electron Temperature Measurements | 123 |
| 5.4 Determination of Basic Plasma Parameters by means of Electromagnetic Waves Propagating Across External Magnetic Fields | 125 |
| 5.4.1 Properties of Ordinary Wave Propagation in Unbounded Homogeneous Plasma | 126 |
| 5.4.2 Measurement of Electron Density of a Bounded Homogeneous Plasma | 130 |
| 5.4.2.1 Model of Single-Layer Medium | 131 |

| | | |
|----------|---|------------|
| 5.4.2.2 | Examples of Interferograms Measured in Collisionless and High-collision Plasma | 135 |
| 5.4.2.3 | Model of Three-Layer Medium | 137 |
| 5.4.2.4 | Transmission of Ordinary Wave in Plasma, Separated from the Walls of Transparent Container by a Vacuum Gap | 139 |
| 5.4.3 | Measurement of Electron Density of Inhomogeneous Plasma | 142 |
| 5.4.3.1 | Measurement of Average Density in a Plane-Parallel Plate of Inhomogeneous Plasma | 142 |
| 5.4.3.2 | Measurement of Average Density in Plasma Cylinder | 144 |
| 5.4.3.3 | Measurement of Density Distribution in a Plane-Parallel Plate of Inhomogeneous Plasma | 148 |
| 5.4.3.4 | Measurement of Radial Density Distribution in a Plasma Cylinder | 155 |
| 5.4.4 | Measurement of Velocity of Moving Plasma | 163 |
| 5.4.4.1 | Measurement of Electron Density and Velocity of a Plasma Cluster | 163 |
| 5.4.4.2 | Measurement of Speed of Plasma with Supercritical Density | 166 |
| 6 | Measurements of Semiconductors | 168 |
| 6.1 | Resistivity Measurements | 170 |
| 6.1.1 | Infinite Homogeneous Semiconducting Medium | 170 |
| 6.1.2 | Bounded Homogeneous Semiconducting Medium | 171 |
| 6.1.3 | Results of Measurement of Resistivity in Si Plates | 172 |
| 6.2 | Determination of Mobility of Charge Carriers in Semiconductors | 174 |
| 6.2.1 | Basic Properties of Solid-State Plasma | 175 |
| 6.2.2 | Complex Permittivity Tensor of One-Component Solid-State Plasma | 177 |
| 6.2.2.1 | Propagation of Electromagnetic Waves in One-Component Solid-State Plasma along the External Magnetic Field ($\theta = 0^\circ$) at $\omega\tau \ll 1$ | 180 |
| 6.2.3 | Microwave Faraday Effect | 182 |
| 6.2.3.1 | Angle of Faraday Rotation | 183 |
| 6.2.3.2 | Principle of Microwave Measurement of the Faraday Rotation | 187 |
| 6.2.3.3 | Measurement of Electron Mobility in n-type Ge | 193 |
| 6.2.4 | Effective Mass Anisotropy | 194 |
| 6.3 | Determination of Relaxation Time | 195 |
| 6.4 | Determination of Charge Carrier Concentration | 197 |
| 7 | Complex Permittivity Measurement in Isotropic Dielectric Materials of Plate Shape | 198 |
| 7.1 | Measurement of Homogeneous Dielectric Materials | 199 |
| 7.1.1 | Infinite Homogeneous Medium | 200 |
| 7.1.1.1 | Determination of ϵ_r of Low-Loss Materials | 201 |
| 7.1.1.2 | Determination of $\tan \delta$ of Low-Loss Materials | 201 |
| 7.1.2 | Bounded Homogeneous Medium | 203 |

| | | |
|----------------------|--|------------|
| 7.1.2.1 | Determination of ϵ_r of Low-Loss Materials | 204 |
| 7.1.2.2 | Determination of Loss Tangent | 205 |
| 7.2 | Measurement of Inhomogeneity of Complex Permittivity over the Cross Section of a Specimen | 206 |
| 7.3 | Measurement of Liquids | 207 |
| 7.3.1 | Measurement of Suspensions | 209 |
| 8 | Open Resonators | 212 |
| 8.1 | The Principle of Function of Open Resonators of the Fabry-Perot Type | 212 |
| 8.2 | Transmission Function of the Fabry-Perot Resonator | 214 |
| 8.3 | Configuration of Open Microwave Resonators | 217 |
| 8.4 | Use of Open Resonators for Complex Permittivity Measurements | 220 |
| 9 | Measurement of Complex Permittivity of Dielectric Materials in the Shape of a Cylinder | 222 |
| 9.1 | Determination of ϵ and $\tan \delta$ by means of Retarded Waves Excited by Helices with $L/\lambda_e < 1$ | 223 |
| 9.1.1 | Dispersion of Retarded Waves in Helices for $L/\lambda_e < 1$ | 226 |
| 9.1.2 | Relations for Determination of the Dielectric Constant and Loss Tangent | 229 |
| 9.2 | Determination of Dielectric Constant ϵ by means of Retarded Waves Excited by Helices with $L/\lambda_e \geq 1$ | 231 |
| 9.2.1 | Dispersion of Retarded Waves in a Tape Helix | 231 |
| 9.2.1.1 | Tape Helix Placed in Infinite Homogeneous Dielectric Medium with Arbitrary ϵ | 234 |
| 9.2.1.2 | Tape Helix Wound on to a Homogeneous Dielectric Cylinder with ϵ_1 Surrounded by a Homogeneous Dielectric Medium with $\epsilon_2 \neq \epsilon_1$ | 240 |
| 9.2.1.3 | Comparison of Theory with Experiment | 242 |
| 9.2.2 | Measurement of ϵ of Dielectric Cylinders by means of Helices Wound from a Conductor of Circular Cross Section | 246 |
| Appendix A | | 248 |
| Appendix B | | 254 |
