EDITOR'S FOREWORD	xiii
PREFACE	xv
CONTENTS OF VOLUME I	xviii
CONTENTS OF VOLUME III	xix
7. MEASUREMENT AND DISCRIMINATION	457
7-1 The Radar Equation	457
7-2 Measurement of Brightness Temperature and Differential Scattering Coefficients	463
7-2.1 Fading Concepts	464
7-2.2 Fading Statistics	476
7-2.3 Averaging of Fading Signals to Reduce the Variance of the Estimate of the Mean	483
7-2.4 Measurements in the Presence of Noise	492
7-3 Discrimination in Angle, Range, and Speed	495
7-4 Angle Discrimination	500
7-5 Range Discrimination	506
7-5.1 Pulse Radar	506
7-5.2 FM Radars	512
7-5.3 Chirp Radars	517
7-5.4 Binary-Phase-Code "Chirp"	525
7-6 Speed Discrimination	531
7-7 Ambiguities in Range and Speed Measurement	538
7-7.1 Introduction	538
7-7.2 Ambiguity Function	540
Problems	554
References	561
8. REAL-APERTURE SIDE-LOOKING AIRBORNE RADARS	562
8-1 Introduction	562
8-2 Types of Measurements Made with Radar	563
8-3 Rotating-Antenna Radars	565
8-4 The Nature of SLAR	569
8-5 SLAR Radar Equation	572
8-6 Compensation for Variations in Antenna Pattern, Distance, and Scattering Coefficient	575
8-7 Speckle in SLAR Images	583
8-8 SLAR Systems	595
8-9 Matching System Elements	602
8-9.1 Receiver Transfer Function	602
8-9.2 Matching the Elements for the Desired Transfer Function	609
8-10 Geometric Distortions	612
8-10.1 Distortions in SLAR Images	612
8-10.2 Elevations from SLAR	617
8-10.3 Mountains and Buildings	623
Problems	624
References	628

9.	SYNTHETIC-APERTURE SIDE-LOOKING AIRBORNE RADAR SYSTEMS	630
9-1	Introduction	630
9-2	Ways to Consider SAR	630
9-2.1	Synthesized Aperture	631
9-2.2	Correlation with Reference Point-Target Response	637
9-2.3	Matched Filter for Received Point-Target Signal	639
9-2.4	De-chirping Comparable with Range Pulse-Compression De-chirping	640
9-2.5	Optical-Focusing Equivalent of SAR	640
9-3	SAR Resolution	643
9-3.1	Synthesized-Aperture Point of View	644
9-3.2	Doppler-Beam-Sharpening Point of View	649
9-3.3	Comparison of Real-Aperture Resolution with that of Focused and Unfocused Synthetic Apertures	651
9-4	Ambiguity Considerations in SAR	652
9-4.1	Scanning Synthetic-Aperture Radar	658
9-4.2	Squint Mode	660
9-5	SAR Power Considerations	661
9-6	SAR Errors and Their Compensation	665
9-6.1	Inherent Geometric Errors	665
9-6.2	Electronic-System Stability	665
9-6.3	Motion Errors	666
9-6.4	Attitude Errors	669
9-6.5	Range Walk and Curvature	672
9-7	SAR System Configurations	677
9-8	Speckle and its Reduction in SAR	682
9-9	Introduction to SAR Processing	687
9-9.1	Spectra and Offsets	691
9-9.2	Depth of Focus	694
9-9.3	Processor Timing and Complexity versus Resolution	697
9-10	Focused Electronic Processors	699
9-10.1	Zero-Offset Digital Processing	699
9-10.2	True Synthetic-Aperture Processing	703
9-10.3	Correlation Processing	706
9-10.4	SAW Azimuth De-chirping	709
9-10.5	Range-Sequential Processor with Comb Filter	712
9-11	Optical Processing	717
9-12	Unfocused Processing	722
9-12.1	Beam Pattern	723
9-12.2	Processors	726
9-12.3	Baseband Processor	726
9-12.4	Range-Offset Processor	729
9-13	Summary on Imaging Radars	731
9-13.1	Introduction	731
9-13.2	Spatial Resolution	732
9-13.3	Speckle and Gray-Scale Resolution	734
9-13.4	Power Considerations	735
9-13.5	Antenna and Receiver Gain Corrections for Scattering Coefficient and Range	736
9-13.6	RAR and SAR Systems	737
9-13.7	Matching System Elements	738

9-13.8 Motion Effects	738
9-13.9 Synthetic-Aperture Radar Ambiguity Problems	739
9-13.10 Processing Synthetic-Aperture Radar Data	739
Problems	741
References	745
10. SCATTERING MEASUREMENTS	746
10-1 General Topics on Calibration of Radars	747
10-1.1 Introduction	747
10-1.2 Illumination Integrals	749
10-2 Internal Calibration	757
10-3 External Calibration	766
10-3.1 Introduction	766
10-3.2 Measurement Precision	768
10-3.3 Calibration Targets	770
10-4 Ground-Based and Helicopter-Borne Scatterometer and Spectrometer Systems	779
10-5 Airborne and Spaceborne Scatterometer Systems	791
10-5.1 Introduction	791
10-5.2 Pencil-Beam Systems	791
10-5.3 Fan-Beam Systems	795
10-5.4 Near-Vertical Measurements	806
10-6 Radiometer-Scatterometer Systems	809
Problems	812
References	814
11. PHYSICAL MECHANISMS AND EMPIRICAL MODELS FOR SCATTERING AND EMISSION	816
11-1 Introduction	816
11-2 The Nature of Surface Scattering	819
11-2.1 Surface Parameters	822
11-2.2 Smooth-Surface Criteria	825
11-2.3 Dependence on Surface Roughness	827
11-2.4 Dependence on Dielectric Constant	830
11-3 Simple Physical Models	833
11-3.1 Point Scatterers	833
11-3.2 Facets	837
11-3.3 Bragg Resonance	841
11-3.4 Hard Targets	842
11-4 The Nature of Volume Scattering	844
11-4.1 Sea Ice	848
11-4.2 Snow	848
11-4.3 Vegetation Canopies	851
11-4.4 Soil	851
11-5 Simple Models Relating σ^0 to Physical Parameters	853
11-5.1 The Sea	853
11-5.2 Soil Moisture	860
11-5.3 Vegetation Canopies	863
11-5.4 Snow	875
11-6 Simple Models Relating T_B to Physical Parameters	880
11-6.1 The Sea	880
11-6.2 Soil Moisture	884

11-6.3	Vegetation Canopies	891
11-6.4	Snow	894
11-7	General Characteristics of Terrain and Sea Backscattering	902
11-7.1	Average σ^0 for Terrain	903
11-7.2	Agricultural Terrain	905
11-7.3	Snow	907
11-7.4	Sea Ice	908
11-7.5	Comparison of Target Classes	911
11-7.6	Average σ^0 for the Sea	912
11-8	General Characteristics of Terrain and Sea Emission	914
11-9	Backscattering from Hard Targets	916
Problems	918
References	920
12.	INTRODUCTION TO RANDOM SURFACE SCATTERING AND EMISSION	922
12-1	Introduction	922
12-2	The Received Power and Scattering Coefficients	923
12-3	Recovery of σ^0 from Average-Power Measurements	924
12-4	Scattering from an Undulating Surface	925
12-4.1	Determination of $\hat{n} \times \mathbf{E}$ and $\hat{n} \times \mathbf{H}$	927
12-4.2	The Scattered Fields in Medium 1 (Stationary-Phase Approximation)	929
12-4.3	The Scattered Fields in Medium 2 (Stationary-Phase Approximation)	931
12-4.4	The Scattering Coefficients (Large- $q_z\sigma$, $\bar{q}_z\sigma$ Approximation, i.e., $q_z^2\sigma^2 > 10$, $\bar{q}_z^2\sigma^2 > 10$)	933
12-4.5	The Scattering Coefficients in Medium 1 (a Scalar Approximation with Surface rms Slope Less than 0.25)	936
12-4.6	The Scattering Coefficients in Medium 2 (a Scalar Approximation with Surface rms Slope Less than 0.25)	942
12-4.7	The Kirchhoff Scattering Model	943
12-5	Scattering from a Slightly Rough Surface	949
12-5.1	Formulation of the Scattering Problem	949
12-5.2	Determination of the Field Amplitudes	951
12-5.3	Polarization Amplitudes	956
12-5.4	The Scattering Coefficients	960
12-5.5	The Small-Perturbation Model	962
12-6	Backscattering from a Tilted Perturbed Plane	966
12-7	Reflectivity, Transmissivity, and Emissivity of Irregular Surfaces	973
12-8	Comparison with Measurements	977
12-8.1	Man-Made Surfaces	979
12-8.2	Natural Surfaces	982
Problems	991
APPENDIX 12A	Derivation of the Scattered Fields in the Upper Medium [$(q_z\sigma)^2 > 10$ Approximation]	996
APPENDIX 12B	Derivation of the Scattered Fields in the Lower Medium [$(q_z\sigma)^2 > 10$ Approxiation]	999
APPENDIX 12C	Derivation of the Scattered Fields in Media 1 and 2 (Scalar Approximation)	1002
APPENDIX 12D	Coherent Scattering Component	1006
APPENDIX 12E	The Ensemble Average and Integral Formulas	1010
APPENDIX 12F	rms Slope and Radius of Curvature	1011

APPENDIX 12G	A Solution of the Wave Equation	1013
APPENDIX 12H	Scattering Coefficients Computed from Plane Waves	1014
APPENDIX 12I	Ensemble Average of EE^* and Scattering Coefficients	1016
APPENDIX 12J	Basic Mathematical Results	1017
APPENDIX 12K	Shadowing Functions	1024
APPENDIX 12L	Evaluation of (12.55b) and (12.58b) with Surface Correlation, $\rho = (1 + \xi^2/l^2)^{-1.5}$	1025
References	1032
APPENDIX A	LIST OF CONSTANTS	1034
APPENDIX B	COMMON FUNCTIONS AND TRANSFORMS	1035
APPENDIX C	LIST OF SYMBOLS	1038
APPENDIX D	ABBREVIATIONS, ACRONYMS, AND NAMES OF SYSTEMS AND SATELLITES	1044
INDEX	1047
