CONTENTS

CHAPTER		PAGE
1	**ELECTRONS AND FIELDS**	**1**
1.1	Electron Motion in an Electric Field	2
1.2	Motion in Combined Electric and Magnetic Fields	5
1.3	Conservation of Energy and Charge	8
1.4	Static Electric Fields — Gauss's Law, Poisson's and Laplace's Equations	9
1.5	Static Magnetic Fields — Ampere's Circuital Law, Permanent Magnets	15
2	**ELECTRON EMISSION**	**30**
2.1	Electrons in a Conductor, Work Function, and Contact Potential	32
2.2	The Richardson-Dushman Equation	38
2.3	Cathode Materials	41
2.4	Thermionic Emission Energies	57
2.5	Secondary Emission	62
2.6	Photoelectric Emission	68
3	**BEAMS AND LENSES**	**74**
3.1	Electric Lenses	76
3.2	Magnetic Lenses	84
3.3	Aberrations and Deflection Defocusing Effects	89
3.4	The Spreading of an Electron Beam Because of Its Own Radial Electric Field; Focusing and Confining Beams by Applied Axial Fields	93
4	**DIODES AND ELECTRON GUNS**	**113**
4.1	The Planar Diode	114
4.2	Diodes with Other Electrode Geometries	119
4.3	Two Examples of Diode Rectifiers	122
4.4	Some Effects of Thermal Emission Velocities	126
4.5	Electron Guns	135
5	**GRID-CONTROLLED TUBES — STATIC CHARACTERISTICS**	**149**
5.1	A Particular Triode and Its Electric Field in the Absence of Space Charge	150

CHAPTER PAGE

5.2 The Triode with Space Charge 156
5.3 Tetrodes and Beam-Power Tubes 170
5.4 Pentodes 178

6 INDUCED CURRENTS, EQUIVALENT NETWORKS, AND GAIN-BANDWIDTH PRODUCT 183

6.1 Induced Currents Resulting from the Motion of Charge Between Electrodes 184
6.2 Currents Induced in External Impedances 188
6.3 Equivalent Networks 190
6.4 Gain-Bandwidth Product 196

7 HIGH-FREQUENCY EFFECTS AND BEAM ADMITTANCE 204

7.1 Electron Transit Time and Beam Admittance 206
7.2 The Llewellyn and Peterson Equations 216
7.3 Input Admittance 219
7.4 Two Grid-Controlled Tubes for High-Frequency Amplification 226

8 MICROWAVE COMPONENTS AND CIRCUITS 233

8.1 Maxwell's Equations and the Wave Equation 241
8.2 Energy Stored in Electric and Magnetic Fields; Power Flow in an Electromagnetic Wave 246
8.3 Boundary Conditions 248
8.4 Ohm's Law and Skin Effect 253
8.5 Waveguides 259
8.6 Cavity Resonators 267
8.7 Slow-Wave Structures 270

9 KLYSTRONS 294

9.1 Quantitative Theory of Klystron Interaction 298
9.2 Reflex Klystrons 310
9.3 Space-Charge Waves 322
9.4 Multicavity Klystron Amplifiers 337

10 TRAVELING-WAVE AMPLIFIERS 349

10.1 Theory of the Traveling-Wave Amplifier 353
10.2 High-Power Tubes 370
10.3 Helix Slow-Wave Circuits 381

CHAPTER PAGE

11 BACKWARD-WAVE OSCILLATORS AND AMPLIFIERS 398

11.1 Theory of Backward-Wave Interaction 401
11.2 Backward-Wave Oscillators 410
11.3 Backward-Wave Amplifiers 416

12 CROSSED-FIELD DEVICES 423

12.1 Magnetrons 428
12.2 Crossed-Field Amplifiers 449
12.3 M-Carcinotron Oscillators 458

13 NOISE 467

13.1 Fundamental Sources of Noise 471
13.2 Noise in Grid-Controlled Tubes 484
13.3 Noise in Microwave Tubes 494

14 CONDUCTION THROUGH A GAS AT LOW CURRENTS 509

14.1 The Kinetic Nature of a Gas 511
14.2 Diffusion and Mobility 515
14.3 Motion of Ions and Electrons through a Gas Under the Influence of an Electric Field — Experimental Results 520
14.4 Metastable Generation, Diffusion, and Destruction 527
14.5 Emission of Electrons from Metal Surfaces by Ion, Metastable, and Photon Impact 531
14.6 The Townsend Discharge and Breakdown 535

15 THE GLOW DISCHARGE AND COLD-CATHODE TUBES 542

15.1 The Glow Discharge, Ionization Time, and the Arc Discharge 544
15.2 Three Examples of Cold-Cathode Tubes 556
15.3 The Hollow-Cathode Discharge and the Stepping Tube 561

16 HOT-CATHODE TUBES 567

16.1 The Hot-Cathode Discharge in Mercury Vapor; Plasmas and Sheaths 570
16.2 Three Examples of Hot-Cathode Tubes 581
16.3 Other Types of Hot-Cathode Tubes 589

17 GAS LASERS 594

17.1 Energy Levels in the Atoms 597
17.2 Operation of a Laser 600
17.3 A Helium-Neon Gas Laser 603
17.4 Other Gas Lasers 607

APPENDICES

I	MKS Units and Dimensions	610
II	Table of Physical Constants and Conversion Between Units	611
III	Some Relationships Pertaining to Electric and Magnetic Fields and Current Flow	612
IV	A Summary of Relations Pertaining to the Velocity Distribution, Energy Distribution, and Angular Distribution of the Electrons Emitted from a Thermionic Cathode	614
V	In an Axially Symmetric Field the Potential at Off-Axis Points Can Be Expressed in Terms of the Potential on the Axis and Its Derivatives	616
VI	Several Relations Between the Object Position, the Image Position, and the Focal Lengths of an Electron Lens	617
VII	A Steady-State Solution of Poisson's Equation for a Space-Charge-Limited Diode Is Unique	620
VIII	If a Two-Dimensional Potential in Free Space Is Symmetric About an Axis, the Potential at Off-Axis Points can be Expressed in Terms of the Potential on the Axis	621
IX	Approximate Expressions for the Electrostatic Amplification Factor of a Planar Triode and for the Functions F_1 and F_2	623
X	Impedance of a Space-Charge-Limited Planar Diode	629
XI	Llewellyn-Peterson Coefficients	633
XII	Some Useful Vector Relationships	635
XIII	Group Velocity and Energy Flow	637
XIV	Time Average Stored Energy	640
XV	Klystron Interaction for a High Degree of Bunching	641
XVI	A Derivation of the Expression for the Thermal Noise Generated by a Resistance	643
