<b>Preface</b>	v
<b>Acknowledgements</b>	vii
<b>I. Introduction: scope and plan of the report</b>	1
<b>II. The chemistry of plutonium and related elements, with special reference to their biological behavior</b>	2
General chemistry	2
Hydrolysis, polymerization, and complex ion formation	2
Interactions with molecules of biological importance	3
<b>III. Entry of plutonium by inhalation</b>	5
Partition in the respiratory tract	5
Retention as a function of compound class	6
Early clearance	7
Long-term clearance	7
Translocation from the lung	8
Pathological consequences of plutonium inhalation	9
Conclusions	9
Table 3.1. Amended constants for use with TGLM clearance model	
Table 3.2. Summary of principal inhalation studies with plutonium compounds in experimental animals	
<b>IV. The absorption of plutonium and related elements from the gastrointestinal tract</b>	10
Conclusions	13
Table 4.1. The absorption of americium, neptunium, plutonium, and thorium from the gastrointestinal tract	
<b>V. Absorption of plutonium and related elements through the intact skin</b>	14
Conclusions	15
<b>VI. Entry by injection, punctures, or other wounds: tissue distribution of absorbed nuclides</b>	16
Introduction	16
Intravenous administration	16
Effect of colloidal or polymeric state	32
Effect of valence	32
Effect of stable, non-metabolizable chelating agents	32
Effect of radionuclide mass	32
Intramuscular administration	33
Intradermal or subcutaneous administration	34
Subcellular distribution	34
Translocation of actinides to secondary deposition sites	34
Conclusions	37
Table 6.1. Distribution of actinide compounds after intravenous injection	
Table 6.2. Absorption and distribution of actinide compounds after intramuscular injection	
Table 6.3. Distribution of plutonium after intradermal or subcutaneous injection	

<b>VII. Retention of deposited actinides</b>	<b>38</b>
Introduction	38
Tissue retention after a single introduction	38
Skeleton	38
Bone marrow	42
Liver	43
Miscellaneous soft tissues	44
Tissue retention after continuing introduction from a local deposit	45
Depletion rates of plutonium from skeleton and liver of man	45
Skeleton	45
Liver	46
Possible carcinogenic implications for man	47
Conclusions	47
Table 7.1. Retention of deposited actinides	
<b>VIII. General conclusions</b>	<b>49</b>
<b>References</b>	<b>52</b>
