

# Contents

<b>Preface</b>	iv
<b>Introduction</b>	1
<b>Scope of Report</b>	2
<b>Present and Potential Human Exposures to High-LET Radiation</b>	2
Cosmic radiation	3
Artificial sources	4
<b>Types and Characteristics of the High-LET Radiations Used in Mutagenesis Research</b>	5
Types of radiation	5
Radiation quality	5
LET	6
LET distributions	7
Average LET	7
<b>Studies on Mutation Induction</b>	9
Micro-organisms	9
Fungi	9
Higher plants	11
Insects	16
Experimental mammals	22
Man	26
<b>Interpretation of the Results</b>	28
<b>Relationship between LET and RBE for Mutation Induction</b>	29
<b>Factors likely to Influence the RBE-LET Relationship</b>	32
Dose and dose rate	32
Dose fractionation	33
Sex and type of germ cell	34
Oxygen	34
Type of mutation	35
<b>Applicability to Man</b>	35
<b>Implications for Radiation Protection</b>	36
<b>Conclusions</b>	37
<b>Summary</b>	37
<b>References</b>	39
