

## Contents

<b>Preface</b>	iv
<b>A. Introduction</b>	1
<b>B. Choice of Nuclide and Compound</b>	1
1. Half-life	2
2. Energy of emission	2
3. Type of emission	3
4. Chemical form	3
5. Availability of substitute elements or compounds	3
6. Requirement of test	4
<b>C. Organ of Reference</b>	4
<b>D. Estimates of the Dose per Unit of Activity Administered</b>	5
<b>E. Recommendations on the Clinical Use of Radionuclides</b>	5
1. Categories of subjects	5
2. Basic principle	6
3. Adult patients	6
4. Pregnant patients	6
5. Children	6
6. Normal controls	7
7. Repeat investigations	7
8. The use of blocking agents	7
<b>F. Notes on Further Metabolic Information Required for Dosimetry</b>	7
<b>G. Tabulation of Data</b>	8
<b>References</b>	9
<b>Appendices</b>	10
