Preface xi

PART I INTRODUCTION TO RADAR SYSTEM SIMULATION 1

Chapter 1 Basic Electromagnetic Principles, Conventions, and Definitions 3

1.1 Geometric Conventions 3

1.2 Vector Mathematics 6

1.3 Electromagnetic Theory 9

1.4 Summary 11

Chapter 2 Radar System Component Interaction 13

2.1 Components of a Radar Simulation 13

2.2 Interaction among Radar System and Environmental Components 18

2.2.1 The Antenna Functional Model 18

2.2.2 The Radome Functional Model 33

2.3 Summary 36

PART II ANTENNAS 37

Chapter 3 Fundamental Principle 39

3.1 Derivation of the Gain Algorithm 39

3.2 Verification of the Algorithm 46

3.3 Actual Gain Calculations 57

3.4 Look-Angle Convention 59

3.5 Summary 60

Chapter 4 General Application 63

4.1 Structuring a Basic Pattern Model 63

4.2 Lobe Shaping 69

4.3 Angular Distortion 77

4.4 Radial Modulation 83

4.5 Summary 94

Chapter 5 Application to Horn and Reflector Antennas 95
5.1 Modeling a Known Antenna Pattern 95
5.2 Modeling an Unknown Antenna Pattern 106
5.3 Modeling the Cross-Polarized Gain Pattern 113
5.4 Summary 116
Chapter 6 Application to Planar Array Antennas 117
6.1 Directivity Effects 118
6.1.1 The Fourier Model 119
6.1.2 The Geometric Model 131
6.2 Steering Effects on Peak Gain 134
6.3 Planar Array Cross-Polarized Pattern 142
6.4 Summary 143
Chapter 7 Application to Monopulse Tracking Systems 145
7.1 Monopulse Antenna Systems 145
7.2 Four-Horn Monopulse Simulation 152
7.3 Planar Array Monopulse Simulation 161
7.4 Summary 165
PART III RADOMES 167
Chapter 8 Geometric Principles 169
8.1 Radome Shape Function 170
8.2 Calculation of the Point of Intersection 175
8.3 Calculation of the E-Vector Components 177
8.4 Analysis 180
8.5 Summary 186
Chapter 9 Transmission Modeling Techniques 187
9.1 Fundamentals 187
9.2 Algorithm 194
9.2.1 Path Calculations 194
9.2.2 Equivalent Impedance 195
9.3 Analysis 199
9.4 Summary 200
Chapter 10 Application to Single-Layered Radomes 205
10.1 Single-Layer Radome in Lossless Media 205
10.2 Frequency Dependency 213
10.3 Summary 213
Chapter 11 Application To Multilayered Radomes 215
11.1 Ray Tracing through Multilayered Radomes 215
11.2 Quarter-Wave Matching 216
11.3 Antistatic Layers 226
11.4 Five-Layer Radomes 227
11.5 Summary 230

Appendix A Antenna Simulation Models 233
A.1 Antenna Algorithm Models 233
A.2 Input-Output Utilities and Driver 243
A.3 Example Simulation 260
Appendix B Radome Simulation Models 265
B.1 Geometric and Transmission Models 265
B.2 Support Utilities 271
Index 283
