1. Basic Principles. By S. H. Lee (With 28 Figures)	1
1.1 Historical Overview	1
1.2 Diffraction Phenomena	2
a) The Fresnel Diffraction	3
b) The Fraunhofer Diffraction	5
1.3 Fourier Transform Properties of Ideal Thin Lens	6
1.3.1 Object Placed Against the Lens	7
1.3.2 Object Placed in Front of the Lens	8
1.3.3 Object Placed Behind the Lens.	9
1.3.4 Some Properties of the Fourier Transform.	10
1.3.5 Some Useful Fourier Transform Pairs and Their Physical Significance	11
1.4 Imaging Properties of Lenses	13
1.4.1 Imaging with Coherent Light	13
1.4.2 Imaging with Partial Coherent Light	16
1.4.3 Imaging with Incoherent Light.	18
1.5 Effects of Lens Pupil Function	19
1.5.1 Effects of $P(x, y)$ on Fourier Transform Operations.	20
1.5.2 Effects of $P(x, y)$ on Coherent Imaging	20
1.5.3 Effects of $P(x, y)$ on Incoherent Imaging	21
1.6 Frequency Responses of Optical Imaging Systems	22
1.6.1 Frequency Response of a Coherent Imaging System	22
1.6.2 Frequency Response of an Incoherent Imaging System	23
1.6.3 Comparison of Coherent and Incoherent Imaging	26
a) Comparison Based on Image Frequency Contents	27
b) Comparison Based on Two Point Resolution	28
c) Comparisons Based on Some Subjective Factors	30
1.6.4 Superresolution	31
a) Optical Approach.	31
b) Digital Approach	34
1.7 Topics of Practical Interest Related to Optical Fourier Transform	36
1.7.1 Spherical Wave Illumination.	36
1.7.2 Position Accuracy Requirement on Back Focal Plane	36
1.7.3 The Fourier Transform Lens	37
a) Spherical Aberration	38

b) Coma	38
c) Astigmatism	39
d) Field Curvature	40
References	40
2. Coherent Optical Processing. By S. H. Lee (With 23 Figures)	43
2.1 Spatial Filter Synthesis	43
2.1.1 Simple Filters	43
2.1.2 Grating Filters	45
2.1.3 Complex Spatial Filters.	50
2.1.4 Computer Generated Spatial Filters	52
2.1.5 Spatial Filtering Functions Based on Coherent Optical Feedback	55
2.2 Diffraction Efficiencies and Classifications of Spatial Filters.	57
2.2.1 Thin Amplitude Grating Filters	58
2.2.2 Thin Phase Grating Filters	59
2.2.3 Thick Transmission Grating Filters.	60
2.2.4 Thick Reflection Grating Filters	60
2.3 Alternative Designs of Optical Processors	60
2.3.1 Joint Transform Processor	61
2.3.2 Two-Lens Coherent Optical Processor	62
2.3.3 One-Lens Coherent Optical Processor.	63
2.3.4 Alternative Coherent Feedback Processor	63
2.4 Coherent Optical Noise Suppression	65
References	67
3. Incoherent Optical Processing	
By W. T. Rhodes and A. A. Sawchuk (With 27 Figures)	69
3.1 Coherent vs. Incoherent Processing	69
3.2 Redundancy and Noise Suppression	72
3.3 Diffraction-Based Incoherent Spatial Filtering.	74
3.3.1 Basic Theory	74
3.3.2 Energy Spectra Correlators	77
3.3.3 PSF Synthesis with Holographic Pupil Transparencies . .	80
3.3.4 Bipolar Spatial Filtering with Two-Pupil OTF Synthesis. .	83
3.4 Geometrical Optics-Based Processing: Imaging	92
3.4.1 Basic Processing Variables	94
3.4.2 Spatial Scanning Processors	95
3.4.3 Temporal Scanning Processors.	97
3.4.4 Temporal/Spatial Processors.	99
3.5 Geometrical Optics-Based Processing: Shadow Casting	102
3.5.1 Lensless Shadow Casting Systems	103
3.5.2 Shadow Casting Systems with Lenses	105
3.6 Summary and Conclusions	107
References	107

4. Interface Devices and Memory Materials	
By G. R. Knight (With 32 Figures)	111
4.1 Interface Devices	111
4.1.1 Liquid Crystal Light Valve	114
4.1.2 Electron-Beam Addressed DKDP	119
4.1.3 Pockels Readout Optical Modulator (PROM)	121
4.1.4 Single Crystal Ferroelectrics (Photo-Titus)	126
4.1.5 Ceramic Ferroelectrics	129
4.1.6 Deformable Surface Devices	133
a) Deformable Surface Tubes	133
b) Ruticon	136
4.1.7 Membrane Light Modulator	138
4.1.8 Summary of Interface Devices	140
4.2 Memory Materials	141
4.2.1 Photon-Induced Effects	144
a) Photochromics	144
b) Electro-Optic Crystals	150
c) Ferroelectric - Photoconductor Media	156
d) Thermoplastic - Photoconductor Media	158
e) Other Effects	161
4.2.2 Thermal Effects	162
a) Permanent Recording Media	162
b) Thermomagnetic Materials	164
c) Amorphous - Crystalline Transition	170
d) Semiconductor - Metal Transition	172
4.2.3 Recording Material Application and Summary	174
References	175
5. Hybrid Processors. By D. P. Casasent (With 24 Figures)	181
5.1 Overview	181
5.1.1 Advantages of Optical Processing	182
5.1.2 Advantages of Digital Processing	183
5.1.3 Hybrid Processing	183
5.2 Diffraction Pattern Sampling	184
5.2.1 System Description	184
5.2.2 Laboratory Applications	186
5.2.3 Factory Applications	191
5.3 Optical Preprocessing	194
5.3.1 Texture-Variance Analysis	196
5.3.2 Particle Size Analysis	198
5.3.3 Planimetric Analysis	199
5.4 Hybrid Correlators	199
5.4.1 Automated Matched Filter Synthesis	200
5.4.2 Digitally Controlled Fourier Plane Filter	202
5.4.3 Object Motion Analysis	204

5.4.4	Photogrammetric Compilation	205
5.4.5	Water Pollution Monitoring	207
5.4.6	Hybrid Frequency Plane Correlator (FPC) System	208
a)	Signal Processing	208
b)	Image Processing	210
5.4.7	Optical Word Recognition	211
a)	Normalization and Weighted MSF Systems	211
b)	Output Detection Criteria	213
5.4.8	Hybrid Joint Transform Correlators	215
5.4.9	Hybrid Incoherent Correlators	217
5.4.10	Other Advanced Hybrid Processors	218
5.5	Optical Digital Interface	219
5.5.1	General Considerations	219
5.5.2	Block Diagram	221
5.5.3	Fundamental Operations	225
5.5.4	Software Operation System	227
5.5.5	Microprocessor Based Hybrid System	229
5.6	Summary and Conclusion	231
References		232

6. Linear Space-Variant Optical Data Processing

By J. W. Goodman (With 11 Figures)	235	
6.1	Linear, Space-Variant Operations	236
6.1.1	Input-Output Relationships	236
6.1.2	Frequency Domain Representations	238
6.1.3	Discrete Representation of Linear Space-Variant Operations	240
6.2	Optical Implementations of Space-Variant Linear Operations . .	244
6.2.1	Implementations Based on Simultaneous Control of the Position and Direction of Rays	244
6.2.2	Implementations Based on Holographic Multiplexing Techniques	248
6.2.3	Techniques for Performing One-Dimensional Linear Space-Variant Operations	250
6.2.4	Coordinate Transformation Processing	253
6.2.5	Matrix Multiplication Implementations	255
6.3	Concluding Remarks	259
References		259

7. Nonlinear Optical Processing. By S. H. Lee (With 52 Figures)

7.1	Half-Tone Screen Process	261
7.2	Theta Modulation Techniques	266
7.2.1	Encoding by a Scanning Interferometric Pattern System . .	267
7.2.2	Encoding by a Variable Grating Mode Liquid Crystal Device	271

7.3 Nonlinear Devices	272
7.3.1 Nonlinear Processing with Fabry-Perot Interferometer (FPI)	272
a) FPI Containing Amplitude Modulation Medium	272
b) FPI Containing Phase Modulation Medium	274
c) FPI Containing Saturable Absorber	276
7.3.2 Optical Parallel Logic Operations Performed on PROM	276
7.3.3 Analog-to-Digital Conversion Performed by Birefringent Liquid Crystal Devices	280
7.3.4 Optical Parallel Logic Operations Performed by Twisted Nematic Liquid Crystal Devices	286
7.3.5 Bistable Optical Spatial Devices Using Direct Optical Feedback	294
7.4 Concluding Remarks	302
References	303
Subject Index	305
