

# Contents

<i>Notation</i> .....		xi
<b>Chapter 1</b>	<b>Introduction and General Survey</b>	
1.0.	Introduction.....	1
1.1.	Applications of High Fields .....	2
1.2.	Techniques of Magnetic Field Generation..	5
1.3.	Historical Review .....	8
1.4.	Centers of High-Field Work .....	9
<b>Chapter 2</b>	<b>Solenoid Analysis</b>	
2.0.	Introduction.....	13
2.1.	Analysis of Optimization .....	14
2.2.	Extension of Analysis to Include Cooling ..	16
2.3.	Field away from the Origin .....	19
2.4.	Electromagnetic Forces .....	23
2.5.	Inductance Calculations.....	27
	Appendix.....	29
<b>Chapter 3</b>	<b>Cooling</b>	
3.0.	Introduction.....	33
3.1.	Theory of Cooling.....	33
3.2.	Nucleate Boiling Heat Transfer.....	39
3.3.	Further Cooling Topics .....	40
3.4.	Coolant Fluids.....	42
<b>Chapter 4</b>	<b>Solenoid Construction and Instrumentation</b>	
4.0.	Introduction.....	45
4.1.	General Constructional Considerations....	45

	4.2. Solenoid Constructions . . . . .	47
	4.3. Instrumentation . . . . .	54
<b>Chapter 5</b>	<b>Power Supplies</b>	
	5.0. Introduction . . . . .	61
	5.1. Conventional Coils . . . . .	62
	5.2. Cryogenic Systems . . . . .	69
	5.3. Economic Considerations . . . . .	73
<b>Chapter 6</b>	<b>Hard Superconductors</b>	
	6.0. Introduction . . . . .	77
	6.1. Superconductivity . . . . .	79
	6.2. Flux-Pinning and Currents in Type II Superconductors . . . . .	88
	6.3. Further Properties and Limitations of Type II Superconductors . . . . .	90
	6.4. Sponge Models . . . . .	94
	6.5. Type II Superconductors and Sponge Models . . . . .	95
	6.6. Characteristics of Hard Superconducting Materials for Solenoid Construction . . . . .	96
	6.7. Other Hard Superconductors and Future Materials . . . . .	103
<b>Chapter 7</b>	<b>Superconducting Solenoids</b>	
	7.0. Introduction . . . . .	105
	7.1. Theoretical Analysis . . . . .	106
	7.2. Degradation of Solenoid Performance, Training, and Other Effects . . . . .	108
	7.3. Stabilization of Coils . . . . .	113
	7.4. Coil Construction . . . . .	121
	7.5. Leads and Contacts in Superconducting Coils . . . . .	122
	7.6. Power Supplies and Flux-Pumping . . . . .	123
	7.7. Future Developments . . . . .	128
<b>Chapter 8</b>	<b>Pulse Techniques and Flux Concentration</b>	
	8.0. Introduction . . . . .	129
	8.1. Electromechanical Systems . . . . .	130
	8.2. Lead-Acid Cells . . . . .	133
	8.3. Low-temperature Pulsed Solenoids . . . . .	135
	8.4. Condenser Discharges . . . . .	136
	8.5. Flux Concentrators . . . . .	142
	8.6. The Implosion Technique . . . . .	146

<b>Chapter 9</b>	<b>Future Prospects</b>	
	9.1. Superconductors .....	151
	9.2. Orthodox Coils .....	152
	9.3. Pulsed Coils .....	153
	9.4. Force-Free Coils .....	154
	9.5. Conclusion .....	155
	<b>References</b> .....	157
	<b>Indexes</b>	
	Subject Index .....	161
	Author Index .....	163
