SECTION I	PHYSICS OF ELECTRON AND ION BEAMS	1
1.	B. W. SCHUMACHER, A Review of the (Macroscopic) Laws for Electron Penetration through Matter	5
2.	W. B. NOTTINGHAM, Fundamentals of Thermionic Energy Conversion	71
3.	K. AMBOSS, Verification and Use of Herrmann's Optical Theory of Thermal Velocity Effects in Electron Beams in the Low-Perveance Regime	86
4.	E. B. BAS AND G. CREMOSNIK, Experimental Investigation of the Structure of High-Power-Density Electron Beams	108
5.	EMIL C. MULY AND JAMES LITTON, JR., Energetic Electron Beams and Cold Cathode Boundary Conditions	133
6.	HELMUT SCHWARZ, Mechanism of High-Power-Density Electron-Beam Penetration in Metal	158
SECTION II	ELECTRON AND ION BEAMS IN MICRO-ELECTRONICS	187
7.	A. N. BROERS, Micromaching by Sputtering through a Mask of Contamination Laid Down by an Electron Beam	191
8.	P. A. EINSTEIN, Some Observations on the Formation of Tracks in Thin, Supported Metal Films Produced by an Electron Beam	205
9.	R. F. W. PEASE AND W. C. NIXON, Microformation of Filaments	220
10.	JOSEPH M. HLAVIN AND RICHARD A. FOTLAND, The Fabrication of Electronic Components Using Low-Energy Electron Beams	231
11.	KAZUO YAMAGISHI, Vacuum Deposition by Means of Electron Beam	245

12.	SUSUMU NAMBA, KIYOSHI WATANABE, EIICHIRO GOTOH, AND KATSUO NISHI, Automatic Control of Electron-Beam Micromaching	264
13.	HIROKAZU KIMURA, HIFUMI TAMURA, KAZUTOSHI IKEGAMI, AND KIYOSHI SAKASHITA, Fabrication of Microelement Resistors by Electron Beam and Their Characteristics	283
14.	D. J. GARIBOTTI, E. H. MILLER, AND P. ANDERSON, Automation of Electron-Beam Processes for Microelectronics	293
SECTION III ELECTRON BEAMS IN RECORDING AND INFORMATION STORAGE		337
15.	T. E. EVERHARDT, Nonthermal Electron-Beam Recording	341
16.	P. WHITE AND D. W. NORTH, An Electron-Beam Memory Utilizing Some Properties of Polymer Films	352
SECTION IV ELECTRON BEAMS IN MATERIALS PROCESSING		365
17.	MANFRED VON ARDENNE, Some New Contributions in the Field of Electron-Beam, Ion-Beam, and Plasma-Beam Technology	370
18.	B. E. PATON AND B. A. MOVCHAN, Electron-Beam Radial Heaters for Melting of Metals	406
19.	C. HAYASHI, S. KASHU, M. KOSAKI, AND H. HIRUTA, Casting Titanium by Using an Electron-Beam Skull Furnace	415
20.	HANS FIEDLER, On the Problem of Remelting Steel in an Electron-Beam Multichambered Furnace	428
21.	A. ACCARY, A. TREILLOU, AND J. TROUVÉ, Electron-Beam Melting of Ceramic Materials	439
22.	P. W. BARTON, E. J. HUGHES, AND A. A. JOHNSON, The Preparation and Properties of the Intermediate Phase Based on the Compound TiCo	460
23.	H. E. DOERING AND P. SHAHINIAN, Effect of Electron Bombardment Heating on Surfaces of Tungsten	481
24.	J. C. WILSON AND M. L. PICKLESIMER, Variable Gradient, Electron-Beam Heating Methods for Growing Single Crystals of Zirconium	502
25.	C. S. TEDMON, JR., AND R. M. ROSE, Substructure and Impurities in Niobium Single Crystals Grown by the Electron-Beam, Floating-Zone Technique	521
26.	E. REXER, On the Deformation, Recrystallization, and Welding of Molybdenum Single Crystals	541
27.	D. R. HAY AND E. SCALA, Field-Aided Electron-Beam Zone Refining of Tungsten	550

28.	L. M. GILLIN, A Multipurpose, High-Temperature Tensile-Testing Machine Using Electron-Beam Heating	567
SECTION V ELECTRON BEAMS IN MATERIALS JOINING		583
29.	N. A. OLSHANSKIY, AND O. K. NAZARENKO, The Current Status of Electron-Beam Welding in the USSR	587
30.	J. L. SOLOMON, New Developments in Electron-Beam Welding	606
31.	J. W. MEIER, Recent Developments in Nonvacuum Electron-Beam Welding	634
32.	R. F. KLEIN, Electron-Beam Welding of Nuclear Fuel Cladding Components	655
33.	A. J. WILLIAMS AND C. F. MARTIN, Properties of Electron-Beam Welds in Ultra-High-Strength Steels	674
34.	MEL SCHWARTZ, Electron-Beam Welding of Brazed Refractory Joints	713
35.	E. B. BAS, G. CREMOSNIK, AND H. LERCH, A 30-kV Electron-Beam Welding Machine with Indirectly Heated Tungsten Cathode	734
36.	P. R. PAYNE, JR., A System to View Electron-Beam Welding by Closed-Circuit TV	759
SECTION VI ELECTRON BEAMS IN MICROANALYSIS		775
37.	R. CASTAING AND G. SLODZIAN, Electron and Ion Beams in Microanalysis	780
38.	D. QUATAERT AND R. THIESEN, Quantitative Analysis Using an Electron Microanalyzer	799
39.	R. THEISEN, Detection Limits of Electron Microprobe Analysis—Application of “Increased Sensitivity Method” in Metallurgy	813
40.	SHELDON H. MOLL, Practical Methods for Experimentally Calibrated Concentration Determination in the Electron-Beam Microanalyzer	825
41.	V. LEROY, Comparison of the Diffusion of Several Substitutional Elements in Nickel and in Cobalt	830
SECTION VII ION PROPULSION		851
42.	R. M. WORLOCK, The Surface Ionization Ion Engine	853
43.	H. HUBER, R. LE BIHAN, AND D. MAUGIS, A Cesium Plasma Capillary Emitter as a Source of Cesium Ions or a Source of Electrons of High-Current Density	877
44.	A. SEPTIER, F. PRANGERE, AND H. ISMAIL, A High-Intensity Mercury Ion Source of Duoplasmatron Type	897

45.	CHARLES D. HENDRICKS, Classical Physics in Modern Space Propulsion: Heavy Particle Beam Formation by Electrical Spraying of Liquids	915
46.	PAUL D. READER, The Operation of an Electron Bombardment Ion Source with Various Gases	925
47.	G. ROHRINGER, Design of Ion Optics on Digital Computers (Abstract)	936
	INDEX	937
