

WELDING AND MICROMACHINING

Bakish, "Some less-known facts about electron beam welding," 3; Boncoeur, "Use of secondary, thermal, and backscattered electrons in the electron-beam welding process," 15; Schumacher, Seaman, "Study of factors producing high efficiency welds with a nonvacuum electron beam welder," 29; Boncoeur, Rapin, "Correlation between dimensions of an electron beam and those of welds obtained with it," 43; College, "Utilization of the electron beam in production," 51; Matting, Sepold, "Electron beam welding of structural steels," 61; Raheja, "Electron beam welding of copper plates," 71; Privoznik, "Application of electron beam welding to thick sections of 12% Cr turbine grade steel," 77; Steigerwald, Meyer, König, "New developments in EB-drilling and perforating processes," 87; Chang, Stewart, "A high resolution electron-beam system for microcircuit fabrication," 97; Hatzakis, Broers, "High-resolution electron-beam fabrication," 107.

RELATIVISTIC ELECTRON BEAMS; HIGH-ENERGY ELECTRONS

115

Clark, Ury, Andrews, Hammer, Linke, "High-current relativistic electron beam accelerators at Cornell University," 117; Condon, "Production and diagnostics of high-current pulsed relativistic electron beams," 131; Yonas, Spence, "Experimental investigations of high v/γ beam transport," 143; Uglum, McNeill, Graybill, "Beam characteristics of intense relativistic electron accelerators," 155; Trivelpiece, "Collective effect--acceleration of ions," 163; Bauer, "Particle beams in the solar terrestrial environment (invited paper)," 164; Cosslett, "Electron transmission, energy loss, and radiation damage at high beam voltages (invited paper)," 165.

ION IMPLANTATION

175

Smith, "A versatile arc source for ion implantation systems," 177; Ikeda, Tsuchimoto, Tokuyama, "Defects in silicon during ion implantation," 183; Wählin, Chernow, "The University of Colorado ion implanter," 189.

SEMICONDUCTORS AND SEMICONDUCTOR LASERS; MATERIALS PROCESSING WITH LASERS; MISCELLANEOUS LASER AND EB APPLICATIONS

195

Namba, Aritome, Masuda, "Electron-beam-pumped CdS laser," 197; Namba, Iwai, "GaAs laser by electron beam excitation," 203; Brewster, "Electron beam parameters for pumping semiconductors to multimegawatt stimulated light level," 209; Kasprzak, "Laser probe for characterization of semiconductor surface states," 217; Barber, Linn, "Some novel approaches in the utilization of lasers in materials processing," 225; Chun, "Interaction of high-intensity laser beams with metals," 231; Spitz, "Experimental use of a laser to penetrate uranium," 233; Asmus, Baker, "Nonlinear surface phenomena associated with laser beam penetration of metals," 241; Flinchbaugh, Barnard, "Metal machining with an argon laser beam," 247; Minkowitz, "Application of helium-neon lasers for process dimensional control," 248; Ando, Sato, Aoki, Okada, Kikuchi, Sugano,

TABLE OF CONTENTS (Cont'd)

Page

"An application of the laser in contour measurement," 249; Tencza, Angelo, "Selective removal of Teflon insulation from wire using CO₂ and argon lasers," 259; Schumacher, Taylor, "Rock breakage by means of electron beam piercing (laboratory tests)," 271; White, "Phenomena associated with electron-beam evaporating," 285; Zimmermann, "Energy broadening in accelerated electron beams by Coulomb interaction," 297.

LASER EXCITATION & INSTRUMENTATION; NEW MICROANALYTICAL TOOLS 305

Nasini, Redaelli, "Ceramic plasma container for ion lasers," 307; Rocherolles, "Focusing of intense laser beams," 311; Beck, "Laser requirements for magneto-optical recording," 317; Schwarz, Hora, "Observation of electron diffraction pattern on nonluminescent target caused by laser interaction," 323; Fóti, "Feedback control of high intensity triode guns," 329; Helmer, Weichert, "Induced electron emission spectroscopy," 337; Simpson, "Electron impact spectroscopy," 345; Heinrich, "Electron and ion microprobe analysis," 353.

ELECTRON MICROSCOPES; ELECTRON OPTICS; ELECTRON SCATTERING 361

Plows, Nixon, "Further developments in stroboscopic scanning electron microscopy," 363; Banbury, Nixon, "Improved contrast in scanning electron microscopy," 364; Weiner, "Transmission scanning electron microscope using field emitters and liquid helium," 365; Tighe, Hockey, "Ion thinning of electron microscope specimens," 375; Kanaya, Kawakatsu, Atoda, "Color observation of electron microscope images," 381; Steigerwald, Meyer, Scheffels, "A new type of electron gun," 389; El-Kareh, "Design and analysis of symmetrical and asymmetrical electrostatic immersion lenses using a digital computer," 393; El-Kareh, Parks, "Computer analysis of symmetrical magnetic lenses with unsaturated pole pieces," 407; McWhirter, "Paraxial electron trajectories with space charge," 429; Wolter, "High-speed high-resolution deflection system," 435; Hughes, "Long-life, high-brightness sources for demountable guns," 441; Yamazaki, Everhart, "Point-cathode electron gun analysis," 453; Hoff, Everhart, "Direct measurement of electron energy loss in solids," 454; Schubert, "Computation of small-angle scattering and its importance for electron beam welding," 459; Hart, "Angular distribution of backscattered electrons," 473.

BIOLOGICAL AND CHEMICAL APPLICATIONS OF LASERS 483

Süsskind, "Biological research with lasers (invited paper)," 484; Riggle, "Q-switched neodymium laser effects on tissue," 487; Namba, Kim, Taki, "Laser-induced chemical reaction," 493; Wilhelmi, Szews, "Laser detection of visible air pollution," 501.

APPENDIX 507

Wells, "Bibliography on the scanning electron microscope," 509.
