

CONTENTS

CHAPTER 1	INTRODUCTION	1
1-1	Fluid mechanics in engineering curriculum, 1	
1-2	Historical development of fluid mechanics, 2	
1-3	Dimensions and units, 3	
1-4	Physical properties of fluids and their influences on fluid motion, 4	
CHAPTER 2	FLUID STATICS	7
2-1	Static fluid pressure, 7	
2-2	Variation of pressure with elevation in a fluid, 8	
2-3	Measurement of fluid pressure, 14	
2-4	Hydrostatic forces on plane surfaces, 21	
2-5	Hydrostatic forces on curved surfaces, 26	
2-6	Buoyancy, 28	
2-7	Stability of submerged and floating bodies, 31	
CHAPTER 3	FLUID KINEMATICS	45
3-1	Fluid in motion, 45	
3-2	Streamlines and stream tubes, 47	
3-3	Principle of continuity—conservation of mass flow, 50	
3-4	Two-dimensional planar flow, 52	
3-5	Rotational and irrotational flow, 56	
3-6	Stream functions, 58	
3-7	Velocity potential functions, 61	

3-8	The flow net analysis, 63	
3-9	Accelerations in fluid motions, 67	
CHAPTER 4	FLUID DYNAMICS	75
4-1	Dynamical equations of fluid motion, 75	
4-2	One-dimensional Euler's equation and Bernoulli's equation, 78	
4-3	Energy equation—conservation of energy, 80	
4-4	Interpretation of Bernoulli's equation, 86	
4-5	Energy equation and Bernoulli's equation for flow systems, 88	
4-6	Applications of Bernoulli's equation, 93	
4-7	Power of hydraulic machinery, 106	
4-8	Pressure-velocity relationship, 108	
4-9	Impulse-momentum equation—conservation of momentum, 112	
4-10	Applications of the impulse-momentum equation, 115	
4-11	Dynamics of confined liquid, 134	
4-12	Vortex motion—flow in curved paths, 138	
CHAPTER 5	FLUID VISCOSITY AND FLOW OF REAL FLUIDS	164
5-1	Characteristics of flow of real fluids, 164	
5-2	Fluid viscosity and laminar motion of fluids, 168	
5-3	Laminar flow of an incompressible fluid through straight channels with parallel boundaries, 174	
5-4	Laminar flow of incompressible fluids in round pipes—Hagen-Poiseuille theory, 183	
5-5	Reynolds dynamical similarity of flow of real fluids, 191	
5-6	Transition between laminar and turbulent flow, 198	
5-7	Fluid turbulence and statistical nature of the turbulent motion of fluids, 201	
5-8	Semiempirical theories of turbulence, 203	
CHAPTER 6	DIMENSIONAL ANALYSIS AND MODEL SIMILITUDE	214
6-1	The significance of dimensional analysis in fluid mechanics, 214	
6-2	Dimensions and dimensional homogeneity, 215	
6-3	Dimensional analysis, 217	

- 6-4 The use of dimensional analysis in presenting experimental data, 225
- 6-5 Model similitude, 226

CHAPTER 7 FLOW OF INCOMPRESSIBLE FLUIDS IN CLOSED CONDUITS 235

- 7-1 Basic equations of friction loss in pipe flow, 235
- 7-2 Coefficient of friction in pipe flow and its physical significance, 237
- 7-3 Laminar flow in pipes, 240
- 7-4 Experimental results of turbulent flow in smooth pipes—power law, 243
- 7-5 Universal velocity distribution laws of turbulent pipe flow, 255
- 7-6 Velocity distribution of turbulent flow in smooth pipes, 261
- 7-7 Velocity distribution of turbulent flow in rough pipes, 269
- 7-8 Velocity distribution equations for turbulent flow in both smooth and rough pipes, 273
- 7-9 Universal resistance laws for turbulent pipe flow, 279
- 7-10 Resistance diagram for commercial pipes, 282
- 7-11 Turbulent flow in closed conduits of noncircular cross sections, 286
- 7-12 Minor losses in pipe lines, 290
- 7-13 Some pipe line problems, 298
- 7-14 Measurement of flow in pipe lines, 305

CHAPTER 8 FLUID COMPRESSIBILITY AND COMPRESSIBLE FLOW 320

- 8-1 Thermodynamic considerations of compressible flow, 320
- 8-2 Bulk modulus, 324
- 8-3 Sonic velocity, 325
- 8-4 Mach number and the dynamic similarity of compressible flow, 328
- 8-5 Basic equations of one-dimensional compressible flow, 329
- 8-6 Integrated equations for one-dimensional reversible adiabatic flow, 334
- 8-7 Effect of area variation on compressible flow, 338

- 8-8 Compressible flow in convergent-divergent passages, 340
- 8-9 One-dimensional shock fronts, 351
- 8-10 Compressible flows in constant-area pipes with friction, 356
- 8-11 Measurement of compressible flows, 365

CHAPTER 9 FLUID FLOW ABOUT IMMERSED BODIES 377

- 9-1 Fundamentals of resistance of immersed bodies, 377
- 9-2 Boundary layers and friction drag, 380
- 9-3 Laminar boundary layer, 385
- 9-4 Turbulent boundary layer, 390
- 9-5 Separation of boundary layer flow and pressure drag, 399
- 9-6 Drag coefficients, 406
- 9-7 Effect of fluid compressibility on the drag, 411

CHAPTER 10 DYNAMIC LIFT 420

- 10-1 Phenomena of dynamic lift, 420
- 10-2 Circulation, 422
- 10-3 Circulation theory of lift and the Magnus effect, 424
- 10-4 Origin of the circulation around an airfoil, 429
- 10-5 Lift coefficient of an airfoil, 431
- 10-6 Induced drag on an airfoil of finite length, 433
- 10-7 Effect of fluid compressibility on the lift, 438

CHAPTER 11 FLOW OF LIQUIDS IN OPEN CHANNELS 443

- 11-1 Basic considerations in open-channel flow, 443
- 11-2 Classification of open-channel flows, 445
- 11-3 Fundamental equations for uniform flows in open channels, 448
- 11-4 Velocity distribution in a cross section of an open channel, 456
- 11-5 Froude number and the dynamic similarity in the flow with free surface, 458
- 11-6 The concept of specific energy and the critical depth of flow in an open channel, 460
- 11-7 Occurrence of alternate depths in an open channel, 464
- 11-8 Gradually varied flow, 469

CONTENTS

xiii

- 11-9 Measurement of flows in open channels, 472
- 11-10 Analogy between open-channel flow and compressible flow, 478

APPENDIX**485**

- A-1 Approximate physical properties of liquids at 60°F and standard atmospheric pressure, 485
- A-2 Physical properties of water at standard atmospheric pressure, 486
- A-3 Physical properties of air at standard atmospheric pressure, 486
- A-4 Properties of the ICAO Standard Atmosphere, 487
- A-5 Conversion of units, 487
