TRANSLATION EDITOR'S PREFACE	v
PREFACE	vii
1. MULTIDIMENSIONAL PERIODIC SYSTEMS	1
1. General Concepts Concerning Periodic and Autonomous Systems	1
2. General Theorems on Dissipative Systems	17
3. Sufficient Conditions for Multidimensional Systems to Be Dissipative	36
4. Dissipative Properties of Certain Second-Order Systems Encountered in Applications	44
5. An Investigation of One Third-Order Nonlinear Equation	52
6. The Existence of Harmonic Oscillations for Higher-Order Systems That Are Not <i>D</i> -Systems	65
7. Convergent Systems	73
8. Problems on Convergence for Second-Order Equations	85
2. FIRST- AND SECOND-ORDER PERIODIC SYSTEMS	96
9. First-Order Equations	96
10. First-Order Equations Periodic With Respect to Both Arguments	119
11. The Coarseness of Differential Equations Defined on a Torus	142
12. General Theorems on the Behavior of Solutions of Second-Order Systems	152
13. The Existence of Invariant Surfaces	165
14. The Existence of an Invariant Surface and the Behavior of Solutions on It in One Special Case	178
15. Investigation of a Dissipative System Whose Set Is of Singular Structure	183
16. On the Existence of Harmonic Oscillations for a System of Two Differential Equations	211
17. Subharmonic Oscillations of a Nondissipative Equation	219
3. AUTONOMOUS SYSTEMS	228
18. General Theorems on Existence and Stability of Periodic Solutions of Autonomous Systems	228

19. The Existence of Periodic Solutions for an Autonomous System of Three Differential Equations	239
20. Investigation of a Differential Equation With a Nonlinearity Satisfying a Generalized Hurwitz Criterion	254
21. On the Boundedness of Solutions	265
22. Periodic Solutions	291
