CONTENTS

VOLUME I

A. ANALYTICAL AND NUMERICAL METHODS

KINETIC THEORY, BOLZTMANN EQUATION COUETTE FLOW AND KNUDSEN-LAYERS.

A.1	J.P. Toennies	Progress in Understanding Intermolecular Forces and the Prediction of Gas Flow Phenomena.
A.2	M.J. Offerhaus	Collision Dynamics of some Modified Rough Spere Gas Models.
A.3	T.J. Forster L.H. Sentman A.D. Grimm	An Investigation of the Utility of a New Kinetic Model for Rarefied Gas Problems.
A.4	U. Weinert K. Suchy	Representation of the Non-Linearized Collision Operator for Orthogonal Expansions of the Distribution Functions.
A.5	S.K. Loyalka	On Numerical Solutions of the Linearized Integral Equations in Rarefied Gas Flows.
A.6	Y.-P. Pao	Boltzmann Collision Operator with Infinite-Range Intermolecular Potentials.
A.7	P.L. Larsen C. Borgnakke	Statistical Collision Model for Simulating Polyatomic Gas with Restricted Energy Exchange.

A.8	O.S. Ryzhov	Numerical Methods in Rarefied Gas Dynamics Developed and Utilized at the Computing Center of the Academy of Sciences of the USSR.
A.9	C. Cercignani	On the General Solution of the Steady Linearized Boltzmann Equation.
A.10	J. Dorning	Existence and Uniqueness of L_1 Solutions to the Boltzmann Equation for Hard-Sphere Intermolecular Potentials.
A.11	B. Zappoli R. Brun J.-P. Petit	Model Equation and Transport Coefficients in Vibrational Non-Equilibrium Diatomic Gases.
A.12	S.M. Yen B.L. Hicks R.M. Osten	Further Developments of a Monte Carlo Method for Evaluation of Boltzmann Collision Integrals.
A.13	D.H. Chung G. Adomeit	Moment Method Solution of the Boltzmann Equation for Complex Gas Phase Reactions.
A.14	S.L. Paveri-Fontana	The Moment Method Applied to the Validation of Davydov's Approximate Results for Weakly Ionized Gases.
A.15	S.M. Yen	Solutions of Kinetic Equations for the Non-Equilibrium Gas Flow between Emitting and Absorbing Surfaces.
A.16	S. Kubota Y. Yoshizawa	Couette Flow Problems by Thirteen Moment Equations.
A.17	T. Soga H. Oguchi	A Numerical Analysis of Nonlinear Cylindrical Couette Flow.

A.18	Yu.A. Koshmarov E.A. Ivanov	Investigation of the Heat Transfer and Temperature Distribution between two Concentric Cylinders.
A.19	E. Möller G. Adomeit	Investigation of the Plane Heat Conduction Problem in the Transition Regime.
A.20	M. Kogan	Knudsen Layer and its Role in the Gas and Plasma Flows.
A.21	M.A. Reynolds J.J. Smolderen J.F. Wendt	Velocity Profile Measurements in the Knudsen Layer for the Kramers Problem.
A.22	G.A. Bird	The Nozzle Lip Problem.
A.23	R. Friedrich	Two-Dimensional Compression and Expansion of a Collisionless Gas.

B. PHYSICS OF FLOWS

FREE JETS AND WAKES, FREE JET BACKGROUND INTERACTION, RELAXATION PHENOMENA, SHOCK STRUCTURES AND REACTION KINETICS.

B.1	E.P. Muntz B.B. Hamel	Rarefaction Phenomena in Gas and Isotope Separations.
B.2	H.G. Nöller	Rarefied Gas Dynamics Problems in Vacuum Technology.
B.3	T. Soga H. Oguchi	Source Flow Expansion of Gas Mixtures into a Vacuum.
B.4	T. Ytrehus	One-Dimensional Effusive Flow by the Method of Moments.

B.5	R. Singh F.C. Hurlbut F. Robben	Free-Jet Relaxation Studies Using Cryogenic Beam Skimming.
B.6	A.H.M. Habets H.C.W. Beijerinck N.F. Verster	Perpendicular-Temperature Measurements on a Cryopumped Supersonic Argon Jet.
B.7	D.G. Papanikas M. Fiebig	Farfield of Low-Density Hypersonic Axisymmetric Jets.
B.8	W.M. Phillips M. White	The Correlation of Viscous Dominated Exhaust Jet Size with Mass Flow Data.
B.9	J. Allègre M. Raffin D. Vennemann	Flow Velocity Determination along a Wake Axis.
B.10	S.K. Muthoo C.L. Brundin	Near Wake Flow Field Measurements behind Spheres in Low Reynolds Number Hypersonic Flow.
B.11	M. Giat G. Dupeyrat	Experimental Study of the Wake Downstream of the Mach Disk in a Free Jet.
B.12	A. Rosengard	A Study of a Background Gas Penetration into a Free Jet Shock Wave Structure by Monte-Carlo Method.
B.13	J.C. Lengrand	Approximate Calculations of Rocket Plumes with Nozzle Boundary Layers and External Pressure.
B.14	H.R. Baum	The Interaction of an Exhaust Plume with a Rarefied Atmosphere.

B.15	T.F. Morse	Non-Equilibrium Effects in Rarefied Gas Dynamics.
B.16	R. Cattolica F. Robben L. Talbot	The Ellipsoidal Velocity Distribution Function and Translational Non-Equilibrium.
B.17	J.W.L. Lewis L.L. Price M. Kinslow	Rotational Relaxation of N_2 in Heated Expansion Flow Fields.
B.18	W. Rixen G. Adomeit	Simple Moments of the Molecular Velocity Distribution Function in Plane Poiseuille Flow.
B.19	R.J. Gallagher J.B. Fenn	A Free Jet Study of the Rotational Relaxation of Molecular Nitrogen from 300 - 1 000 ^{o}K.
B.20	C. Dankert K.A. Bütefisch	Influence of Nozzle Geometry on Vibrational Relaxation in an Expansion Flow.
B.21	N.K. Mitra M. Fiebig	Low Reynolds Number Vibrational Nonequilibrium Flow in Laval Nozzle.
B.22	J.S. Darrozès J.P. Petit	Transport Phenomena and Non-Equilibrium Properties of an Ionized Gas in the Presence of Electric and Magnetic Fields.
B.23	W. Fizdon Z. Walenta	The Structure of a Plane Shock Wave in a Single and Two-Component Gas.
B.24	D.R. Crawford F.W. Vogenitz	Monte Carlo Calculations of the Shock Layer Structure on Adiabatic Cylinders in Rarefied Supersonic Flow.

B.25	M.M. Oberai U.N. Sinha	Shock Wave Structure in Binary Gas Mixture.
B.26	V.B. Baranov M.S. Ruderman	On Waves in Plasma with the Hall Dispersion.
B.27	T.G. Pai S.M. Ramachandra	Shock Structure in a Dissociating Diatomic Gas.
B.28	D. Hänel H. Grönig	The Normal Reflection of a Shock Wave from an Accommodating and Adsorbing Wall.
B.29	B. Schmitt-v. Schubert	Hypersonic Viscous Stagnation Flow of a Gas with Vibrational Relaxation.
B.30	T. Fujiwara	Statistical Fluctuations of Chemical Reaction Rates.
B.31	K. Bärwinkel H. Wolters	Reaction Kinetics and Transport in Relaxing Gases.
B.32	K. Koura	Relaxation of a Chemically Reacting Gas.
B.33	R.G. Wilmoth S.S. Fisher	Some Interesting Aspects of Physisorption Stay-Time Measurements Obtained Using Molecular-Beam Techniques.
B.34	H.C.W. Beijerinck A.H.M. Habets N.F. Verster	Crossed Beam Measurements of Ar-Ar Total Cross-Sections with a Time-of-Flight Machine.
B.35	B. Fischer J. Dittmers K. Schügerl	Investigations of Differential Elastic Scattering Cross Sections of Atoms and/or Molecules of Permanent Gases by Means of Dynamic Molecular Beams.
