

Simplified Kinetic Treatment of Heavy Molecule Velocity Persistence Effects: Application to Species Separation	617
J. Fernandez de la Mora, J. Mercer, D. E. Rosner, and J. B. Fenn, <i>Yale University, New Haven, Conn.</i>	
Fokker-Planck Description of the Freejet Deceleration Flow	627
T. K. Nguyen and R. P. Andres, <i>Princeton University, Princeton, N.J.</i>	
Analysis of Cooperative Behavior of Rarefied Flow and Continuum Flow Components in Separation Nozzle Cascades	642
W. Ehrfeld and W. Fritz, <i>Institut für Kernverfahrenstechnik der Universität und des Kernforschungszentrums, Karlsruhe GmbH, West Germany</i>	

Part II

List of Series Volumes 1-74	xii
Chapter VI. Freejets, Nonequilibrium Expansions	679
Breakdown of Continuum Flow in Freejets and Rocket Plumes . . .	681
G. A. Bird, <i>University of Sydney, Sydney, Australia</i>	
Flowfield Calculations in Nonequilibrium Freejets by the Method of Characteristics	695
M. Labowsky, S. Ryali, and J. B. Fenn, <i>Yale University, New Haven, Conn.</i> , and D. R. Miller, <i>University of California, San Diego, Calif.</i>	
Nonequilibrium Effects in Plane Jets	710
Alfred E. Beylich, <i>Technische Hochschule Aachen, West Germany</i>	
Flow Properties in a Freejet of a Binary Gas Mixture Incident on a Cold Plate	725
H. Mikami and T. Saito, <i>Tokyo Institute of Technology, Ookayama, Meguro, Tokyo, Japan</i>	
Rotational Relaxation in Nitrogen Freejets in the Transition Regime	742
N. V. Karelov, R. G. Sharafutdinov, and A. E. Zarvin, <i>Institute of Thermophysics, Siberian Branch of the USSR Academy of Sciences, Novosibirsk, USSR</i>	
Rotational Level Population Kinetics in Nitrogen Freejets	754
R. G. Sharafutdinov and P. A. Skovorodko, <i>Institute of Thermophysics, Siberian Branch of the USSR Academy of Sciences, Novosibirsk, USSR</i>	
Rotational Temperatures and Densities in H₂ and D₂ Freejet Expansions.	772
H. P. Godfried, Isaac F. Silvera, and J. Van Straaten, <i>Universiteit van Amsterdam, Amsterdam, The Netherlands</i>	

Source Expansion of Monatomic Gas Mixtures	785
Ashok U. Chatwani and Martin Fiebig, <i>Ruhr-Universität Bochum, West Germany</i>	
Rotational and Vibrational Relaxation in Freejet Expansions of CO₂ at Stagnation Temperatures Ranging from 300 K to 1300 K	802
S. Yamazaki, M. Taki, and Y. Fujitani, <i>TOYOTA Central Research and Development Laboratories, Inc., Nagakute-Cho, Aichi-Gun, Aichi-Ken, Japan</i>	
Two- and Three-Dimensional Aspects of a Freejet Issuing from a Long Rectangular Slit	812
G. Dupeyrat, <i>Université Pierre et Marie Curie, Laboratoire d'Aerothermique, Meudon, France</i>	
Chapter VII. Molecular Beams, Applications	821
Measured, Very Narrow Velocity Distributions for Heated, Xe and Ar-Seeded Nozzle-Type Molecular Beams of He and H₂ Skimmed from Freejet Zones of Silence; Xe Energies up to 30 eV	823
R. Campargue, A. Lebéhot, J. C. Lemonnier, and D. Marette, <i>Centre d'Etudes Nucléaires de Saclay, Gif-sur-Yvette, France</i>	
Differential Cross Sections for Vibrational Excitation in a Crossed-Beam Interaction	844
A. Lebéhot, M. A. Gaveau, and R. Campargue, <i>Centre d'Etudes Nucléaires de Saclay, Gif-sur-Yvette, France</i>	
Rotational State Populations in N₂ Nozzle Beams Near the Beam Condensation Limit	856
M. Faubel and E. R. Weiner, <i>Max-Planck-Institut für Strömungsforschung, Göttingen, West Germany</i>	
Observation of Individual Rotational Transitions in a He + N₂ Crossed-Molecular Beam Experiment	862
M. Faubel, K. H. Kohl, and J. P. Toennies, <i>Max-Planck-Institut für Strömungsforschung, Böttingerstr. Göttingen, West Germany</i>	
Experimental Study of Probe-Induced Distortions in Molecular-Beam Mass-Spectrometer Sampling from Flames	867
S. Yoon and E. L. Knuth, <i>University of California, Los Angeles, Calif.</i>	
High Intensity Molecular Beams Skimmed in Continuum Flow	882
C. Dankert and H. Legge, <i>DFVLR Institute for Experimental Fluid Mechanics, Göttingen, West Germany</i>	
Velocity Dependence of Low-Energy Neon-Argon Total Cross Sections	895
W. L. Taylor, R. W. York, and P. T. Pickett, <i>Monsanto Research Corporation, Miamisburg, Ohio</i>	

Photodeflection of Molecular Beams 912

J. L. Picqué, *Laboratoire Aimé Cotton, Centre National de la Recherche Scientifique, Orsay, France*

Formation and Characteristics of Thin Layers Obtained by Sputtering with Molecular Beams Produced by Charge Exchange 921

F. M. Devienne, J. C. Roustau, and M. Repoux, *Laboratoire de Physique Moléculaire des Hautes Energies, Peymeinade, France*

Chapter VIII. Electron Beam Diagnostics 929

Electron Beam Diagnostics in Nitrogen: Secondary Processes 931

A. K. Rebrov, N. V. Karelov, G. I. Sukhinin, and R. G. Sharafutdinov, *Institute of Thermophysics, Siberian Branch of the USSR Academy of Sciences, Novosibirsk, USSR* and J. -C. Lengrand, *Laboratoire, d'Aérothermique, C.N.R.S., Meudon, France*

Electron Beam Technique Rotational Temperature Measurements

Using Unresolved Band Spectra. 946

D. H. Campbell, J. W. L. Lewis, and L. L. Price, *ARO, Inc., Arnold Air Force Station, Tenn.*

Chapter IX. External Flows, Aerodynamics 957

Small-Particle Drag as a Function of the Speed Ratio. 959

J. Gspann, *Institut für Kernverfahrenstechnik der Universität und des Kernforschungszentrums Karlsruhe, West Germany*

Influence of Incomplete Accommodation in Wind Tunnel Experiments on Heat Transfer and Drag of Sharp Cones in the Transition

Regime. 964

H. Legge and C. Dankert, *DFVLR Institute for Experimental Fluid Mechanics, Göttingen, West Germany*

Heat Transfer to a Surface Impinged upon by a Simulated

Underexpanded Rocket Exhaust Plume. 980

J.-C. Lengrand, J. Allègre, and M. Raffin, *Laboratoire d'Aérothermique du C.N.R.S., Meudon, France*

Monte-Carlo Simulation Method Applied to Jet-Wall Interactions

under Continuum Flow Conditions 994

J.-C. Lengrand, M. Raffin, and J. Allègre, *Laboratoire d'Aérothermique, du C.N.R.S., Meudon, France*

Upper and Lower Bounds to the Low-Speed Drag of an Axisymmetric Body in Rarefied Flow. 1007

Robert J. Cole, *University of Strathclyde, Glasgow, Scotland*

Monatomic and Diatomic Gas Flows Past a Sphere 1023

I. N. Larina and V. A. Rykov, *Academy of Sciences of the USSR, Moscow, USSR*

Monte-Carlo Calculations of the Free-Molecule Drag on Chains of Uniform Spheres	1031
B. Dahneke and P. Chan, <i>The University of Rochester, Rochester, N. Y.</i>	
Slip Effects in Hypersonic Rarefied Flow	1040
G. T. Chrusciel, <i>Lockheed Missiles & Space Co., Inc., Sunnyvale, Calif.</i> , Clark H. Lewis, <i>Virginia Polytechnic and State University, Blacksburg, Va.</i> , and T. Sugimura, <i>TRW Defense and Space Systems Group, Redondo Beach, Calif.</i>	
Experimental Study of the Reynolds Number Effect on the Length of the Trailing Edge Region	1055
L. Gottesdiener, <i>Université Pierre et Marie Curie, Laboratoire d'Aérodynamique, Meudon, France</i>	
Stochastic Dynamics of a Flat Plate in Molecular Flow	1063
N. Bellomo, R. Riganti, and M. T. Vacca, <i>Istituto di Meccanica Razionale, Politecnico di Torino, Italy</i>	
Chapter X. Flows Near Surfaces	1081
Navier-Stokes Solution of a Shock-Induced Boundary Layer in a Rectangular Corner	1083
F. Seiler and B. Schmidt, <i>Universität Karlsruhe, West Germany</i>	
Shock Structure near a Wall	1094
F. Seiler and B. Schmidt, <i>Universität Karlsruhe, West Germany</i>	
Velocity-Slip and Temperature-Jump Effects in Similar, Slightly Rarefied Laminar Boundary-Layer Flow Past Surfaces with Incomplete Momentum and Energy Accommodation	1105
B. Gampert, <i>Universität Essen-GH, Essen, West Germany</i>	
Chapter XI. Ionized Flows	1123
Efficient H⁺ Production under Nonequilibrium Conditions	1125
Alan Garscadden and William F. Bailey, <i>Aero Propulsion Laboratory/Air Force Wright Aeronautical Laboratories and the Air Force Institute of Technology, Wright-Patterson AFB, Ohio</i>	
Measurements of Electron Beam Scattering in Partially Ionized Gases	1138
D. R. Gross and R. G. Lord, <i>Oxford University, Oxford, England</i>	
Positive Ions in Cryogenic ⁴He Vapor	1145
G. Akinci, L. S. Nagurney, and J. A. Northby, <i>University of Rhode Island, Kingston, R. I.</i>	

Optical Absorption Measurements of Excited Argon-Atom Densities in an Ionized Freejet Expansion. 1155

Akira Kimura, Ken-ichi Tanaka, and Michio Nishida, *Kyoto University, Kyoto, Japan*

Chapter XII. Condensation Processes 1169

The Derivation of Nonisothermal Nucleation Equations 1171

A. G. Bashkurov and S. P. Fisenko, *USSR Academy of Sciences, Moscow, USSR*

Modeling the Formation of Ion Clusters by Applying Classical Nucleation Theory 1181

Glenn K. Yue, *Institute for Atmospheric Optics and Remote Sensing, Hampton, Va.*

Comparisons between Experimental Observations and Predictions Obtained with Classical Homogeneous Nucleation Theory for Nitrogen Condensation in Large Freejet Experiments 1190

M. Düker and G. Koppenwallner, *DFVLR Institute for Experimental Fluid Mechanics, Göttingen, West Germany*

Noble Gas Condensation in Controlled-Expansion Beam Sources. 1211

Sang Soo Kim, Dian Cheng Shi, and Gilbert D. Stein, *Northwestern University, Evanston, Ill.*
