

# Contents

Preface . . . . .	xiii
List of Illustrations . . . . .	xix

## Chapter 1

### Linear Ordinary Differential Equations

1.1 Initial Value Problem . . . . .	1
1.2 Second-Order Differential Equations . . . . .	3
1.3 Two Point Boundary-Value Problems . . . . .	4
1.4 Systems of Linear Ordinary Differential Equations . . . . .	5
References . . . . .	7

## Chapter 2

### Quasilinearization

2.1 Introduction . . . . .	8
2.2 Newton-Raphson Method . . . . .	8
2.3 Multidimensional Version . . . . .	12
2.4 Generalization of the Newton-Raphson Method to Ordinary Differential Equations . . . . .	12
2.5 Riccati Equation . . . . .	15
2.6 Quasilinearization Algorithm and Application of the Linear Theory . . . . .	19
References . . . . .	21

### Chapter 3

#### Solution of Boundary Layer Equation

3.1	Introduction . . . . .	22
3.2	Physical Background of the Problem. . . . .	22
3.3	Ordinary Differential Equation . . . . .	24
3.4	Application of General Method. . . . .	25
3.5	Alternative Treatment of Initial Conditions. . . . .	26
3.6	Computer Solution . . . . .	27
	References . . . . .	29

### Chapter 4

#### Two Component Boundary Layers on an Ablating Wall

4.1	Introduction . . . . .	30
4.2	Physical Background of the Problem . . . . .	30
4.3	Application of Quasilinearization . . . . .	36
4.4	Application of Quasilinearization to Algebraic Initial Conditions	38
4.5	Sample Solution . . . . .	43
	Nomenclature . . . . .	48
	References . . . . .	49

### Chapter 5

#### Computation of Electrostatic Probe Characteristics

5.1	Introduction . . . . .	50
5.2	Background of the Problem . . . . .	50
5.3	Formulation . . . . .	51
5.4	Transformation to Finite Interval . . . . .	53
5.5	Asymptotic Solution . . . . .	53
5.6	Treatment of Parameters . . . . .	55
5.7	Quasilinearization . . . . .	56
5.8	Asymptotic Solution as Boundary Conditions . . . . .	57
5.9	Orthogonalization of Homogeneous Solutions. . . . .	58
5.10	Discussion of Computer Solutions . . . . .	61
5.11	Coupled Boundary Conditions . . . . .	67
	References . . . . .	71

## Chapter 6

### Prediction of the Stability of Laminar Boundary Layers

6.1	Introduction . . . . .	73
6.2	Background . . . . .	74
6.3	The Orr-Sommerfeld Equation . . . . .	75
6.4	Solution for Large $y$ . . . . .	76
6.5	Quasilinearization . . . . .	77
6.6	Quasilinearization of Solution for Large $y$ . . . . .	79
6.7	Orthogonalization of Homogeneous Solutions . . . . .	80
6.8	Method of Numerical Analysis and Computer Solution. . . . .	81
6.9	Comparison of Quasilinearization with Other Numerical Methods . . . . .	82
6.10	Eigenfunctions and Eigenvalues . . . . .	82
6.11	Comparison with Data and Previous Solutions. . . . .	92
6.12	Stream Functions of the Disturbed Flow. . . . .	100
6.13	Velocity of the Disturbed Flow. . . . .	105
6.14	Perturbation Pressure . . . . .	106
6.15	Power Input to the Disturbance. . . . .	108
6.16	Conclusion. . . . .	110
	References . . . . .	110

## Chapter 7

### Prediction of the Stability of Laminar Pipe Flow

7.1	Introduction . . . . .	112
7.2	Physical Background . . . . .	113
7.3	Eigenvalue Problem for Two-Dimensional Poiseuille Flow. . . . .	113
7.4	Transformation of the Independent Variable. . . . .	114
7.5	Jacobian Matrix. . . . .	115
7.6	Selection of Higher Modes . . . . .	115
7.7	Eigenfunctions and Eigenvalues. . . . .	117
7.8	Disturbed Flow Field Plots . . . . .	124
7.9	First Mode—Minimum Critical. . . . .	126
7.10	Second Mode . . . . .	131
7.11	Third Mode . . . . .	136
7.12	Fourth Mode . . . . .	136
7.13	Conclusion . . . . .	142
	References . . . . .	143

## Chapter 8

### Optimum Orbital Transfer with "Bang-Bang" Control

8.1	Introduction . . . . .	144
8.2	Optimization Problem . . . . .	144
8.3	Quasilinearization . . . . .	148
8.4	Numerical Solution by Quasilinearization . . . . .	154
8.5	Numerical Results . . . . .	160
8.6	Conclusion . . . . .	169
	Nomenclature . . . . .	169
	References . . . . .	170

## Chapter 9

### A Generalized Subroutine for Solving Quasilinearization Problems

9.1	Introduction . . . . .	171
9.2	Programming Philosophy . . . . .	171
9.3	QASLN, A General Purpose Quasilinearization Subroutine . . . . .	172

## Appendix 1

	Program for Computing Boundary Layer upon a Wedge . . . . .	203
	Author Index . . . . .	223
	Subject Index . . . . .	225
