

Contents

Preface	x
Introduction	xiii
1. Thermodynamics	1
1.1 The Scope of Thermodynamics	2
1.2 Equations of State	11
1.2.1 The Equation of State of a Perfect Gas	11
1.2.2 General Equations of State	17
1.2.3 Equations of Limited Validity	28
1.3 The Conservation of Energy	34
1.3.1 Work and Energy	34
1.3.2 Work and Heat	36
1.3.3 Internal Energy	38
1.3.4 The First Law	41
1.3.5 General Principles of Energy Conservation	45
1.4 Response to Energy Addition	50
1.4.1 Specific Heats	51
1.4.2 Bulk Compression	58
1.4.3 The Perfect Gas	61
1.4.4 The Constant-density Substance	65
1.5 The Degradation of Energy	68
1.5.1 Irreversibility	68
1.5.2 Entropy	73
1.5.3 The Entropy of a Perfect Gas	81
1.5.4 The Second Law	84
1.5.5 Thermodynamic Cycles	91
2. Isenergetic Flow	111
2.1 Flow Geometry	113

2.1.1 Integral Models of a Flow	113
2.1.2 One-dimensional Flow	117
2.2 The Momentum Principle	124
2.2.1 Newton's Second Law	124
2.2.2 The Control Volume	126
2.2.3 The Control Mass	128
2.2.4 Change of Flow Direction	133
2.2.5 The Impulse Function	134
2.3 Energy Conversion in Isenergetic Flow	142
2.3.1 The Energy Equation for Steady Flow	142
2.3.2 Classification of Isenergetic Flows	149
2.3.3 Low-velocity Isenergetic Flow	151
2.3.4 High-velocity Isenergetic Flow	160
2.4 Bernoulli's Theorem	169
2.4.1 Bernoulli Integrals	169
2.4.2 Total and Static Properties	181
2.5 Pressure Variations due to Gravity	186
2.5.1 Hydrostatic Pressure	186
2.5.2 Low-velocity Flow under Gravity	199
 3. Shock Waves and Sound Waves	 212
3.1 Shock Waves	213
3.1.1 Classification of Waves	213
3.1.2 General Results for a Normal Shock Wave	216
3.2 Sound Waves	221
3.2.1 The Speed of Sound	221
3.2.2 Mach Number	226
3.2.3 Subsonic and Supersonic Isenergetic Flow	230
3.3 Shocks in a Perfect Gas	231
3.3.1 Formulae and Tables	231
3.3.2 Entropy and Total Pressure	236
3.3.3 The Hydraulic Analogy	238
3.4 Moving Waves	239
3.4.1 General Results	239
3.4.2 Weak Waves	243
3.5 Unsteady Flows	248
3.5.1 The Formation of a Shock Wave	248
3.5.2 Thermodynamic and Mechanical Pressures	253
3.5.3 Expansion Waves	254
3.5.4 The Equations of Unsteady Flow	259

	CONTENTS	vii
4. Isentropic Flow		274
4.1 Bernoulli Equations		275
4.1.1 Bernoulli's Theorem for a Streamtube		275
4.1.2 Bernoulli's Theorem for a Flow Field		281
4.2 Flow with Varying Area		290
4.2.1 General Results		290
4.2.2 The Perfect Gas		297
4.2.3 Thrust Calculations for a Perfect Gas		299
4.3 Flow Measurements		301
4.3.1 Pressure and Temperature		301
4.3.2 The Venturi Meter		306
4.3.3 The Sonic Nozzle		309
4.3.4 Critical Flow at a Weir		313
4.4 Nearly Isentropic Flows		315
4.4.1 Nozzle and Diffuser Flows		315
4.4.2 Duct Efficiencies for Constant-density Flow		318
4.4.3 Duct Efficiencies for Variable-density Flow		323
4.4.4 Flow Coefficients		326
4.4.5 Comparison of Measures of Irreversibility		328
5. Dissipative Processes		339
5.1 Viscous Friction		341
5.1.1 Viscosity		341
5.1.2 Some Steady Laminar Flows		346
5.1.3 A Non-steady Laminar Flow		353
5.1.4 Laminar Dissipation		356
5.2 Dimensional Analysis		359
5.2.1 Units and Dimensions		359
5.2.2 Dimensional Homogeneity		361
5.2.3 Dimensionless Groups		368
5.2.4 Dynamic Similarity		376
5.2.5 Inspectional Analysis		381
5.3 Turbulent Friction		383
5.3.1 Mixing Stresses		383
5.3.2 Flow near a Smooth Wall		387
5.3.3 Flow near a Rough Wall		395
5.4 Mixing and Spreading Flows		398
5.4.1 The Jet Pump		398
5.4.2 The Validity of the One-dimensional Model		403
5.4.3 The Flow in a Diffuser		405
5.4.4 The Drag Integral		408

5.5 Losses in Pipe Flow	411
5.5.1 Friction Losses	411
5.5.2 Loss Coefficients	416
5.5.3 Turbulent Dissipation	424
5.5.4 Flow under Gravity	427
6. Flow with Energy Addition	445
6.1 The Energy Equation for Steady Flow	447
6.1.1 General Results	447
6.1.2 Combustion	455
6.2 Efficiencies for Flow Machines	463
6.2.1 The Hydraulic Efficiency of Pumps and Turbines	463
6.2.2 Other Measures of Efficiency	474
6.2.3 The Efficiency of a Propulsive System	478
6.3 Heat Transfer	483
6.3.1 Modes of Heat Transfer	483
6.3.2 Conduction in Laminar Flow	486
6.3.3 Heat Transfer across a Turbulent Boundary Layer	491
6.3.4 Empirical Heat-transfer Coefficients	496
6.3.5 Dimensional Analysis	504
6.4 Flow with Dissipation and Heat Addition	506
6.4.1 General One-dimensional Flow	506
6.4.2 Comparison of Energy Equations	513
6.4.3 The Rayleigh and Fanno Lines	515
6.5 Flow of a Perfect Gas	519
6.5.1 The General Case	519
6.5.2 Rayleigh Flow	524
6.5.3 Fanno Flow	528
6.5.4 Isothermal Flow	532
6.5.5 Thrust Calculations	534
7. Flow Machines	547
7.1 Energy Conversion in a Turbomachine	549
7.1.1 Absolute and Relative Axes	549
7.1.2 An Elementary Machine	553
7.2 Impulse Turbines	557
7.2.1 The Pelton Wheel	557
7.2.2 The Laval Turbine	561
7.2.3 A Multistage Machine	568
7.3 Axial-flow Machines	571
7.3.1 Work in a Straight Cascade	571

	CONTENTS	ix
7.3.2 Losses in a Cascade	576	
7.3.3 The Turbine Stage	581	
7.3.4 The Compressor Stage	586	
7.4 Radial-flow Machines	591	
7.4.1 Euler's Equation for a Turbomachine	591	
7.4.2 Energy Conversions in Swirling Flow	595	
7.4.3 The Centrifugal Pump or Blower	597	
7.5 Similarity Laws	609	
7.5.1 Flow with Constant Density	609	
7.5.2 Flow with Varying Density	615	
7.6 Cavitation	620	
Bibliography	635	
Appendices	637	
Index	671
