<b>CHAPTER 1 INTRODUCTION TO MEASUREMENT OF UNSTEADY FLOWS</b>	<i>B. E. Richards</i>	<b>1</b>
1 Introduction	1	
2 A Typical Unsteady Flow Measuring Chain	2	
3 Data Processing and Presentation	4	
4 Examples of Research on Unsteady Flows Carried Out at VKI	5	
4.1 Unsteady Flows on Vehicles during Reentry	5	
4.2 Shock Instabilities on Spiked Blunt Bodies	6	
4.3 Measurements of Thermodynamic Properties of Dense Gases	7	
4.4 Measurements of Noise Generated by a Wing with a Blown Flap	7	
4.5 Measurement of Mean Total Temperature in a Turbulent Boundary Layer in the Longshot Tunnel	7	
5 Concluding Remarks	8	
References	8	
Further Reviews on Measurements of Unsteady Fluid Dynamic Phenomena		9
<b>CHAPTER 2 INTRODUCTION TO THEORY OF UNSTEADY FLOWS</b>	<i>J. J. Smolderen</i>	<b>11</b>
1 Unsteady Flows in Fluid Dynamics	11	
2 Basic Equations of Unsteady Viscous and Inviscid Flows	11	
3 Basic Nondimensional Parameters for Unsteady Flows	12	
4 The Theory of Small Unsteady Disturbances	14	
5 Selected Examples of Typical Unsteady Flows	17	
6 Unsteady Thermal Phenomena	19	
<b>CHAPTER 3 MEASUREMENT OF UNSTEADY PRESSURES, FORCES, AND ACCELERATION</b>	<i>Leonard Bernstein</i>	<b>21</b>
1 Introduction	21	
2 Some General Considerations	22	

2.1	Sensitivity and Range	23
2.2	Frequency Response	23
2.3	Size	29
2.4	Environmental Sensitivity	29
2.5	Linearity	30
2.6	Repeatability	30
2.7	Hysteresis and Backlash	30
2.8	Ease of Calibration	30
2.9	Ease of Operation	31
3	Transducer Principles	31
3.1	Active Transducers	31
3.2	Passive Transducers	39
4	The Measurement of Fluctuating Pressures	41
4.1	A Strain-Gauge Pressure Transducer	42
4.2	A Piezoelectric Pressure Transducer	44
4.3	A Variable-Capacitance Microphone That Uses the "Electret Effect"	46
4.4	An Acceleration-Compensated Pressure Transducer	46
5	The Measurement of Unsteady Forces	48
5.1	A Single-Piece Balance Using Resistance Strain Gauges	52
5.2	A Six-Component Piezoelectric Balance	53
5.3	An Acceleration-Compensated Three-Component Balance	56
6	The Measurement of Acceleration	56
7	Final Remarks	57
	Notation	58
	References	59
	Select Bibliography	60

**CHAPTER 4 HEAT TRANSFER, SKIN FRICTION, TOTAL TEMPERATURE, AND CONCENTRATION MEASUREMENTS** *T. V. Jones*

63

1	Heat Transfer Measurements	63
1.1	Introduction	63
1.2	Governing Equations	65
1.3	The Semiinfinite Gauge	66
1.4	Calorimeter Measurements	73
1.5	Gardon Gauges	79
1.6	Optical Surface Temperature Measurements	81
1.7	Lateral Conduction Effects	82
1.8	The Effect of Surface Temperature Distributions	83
2	Skin Friction	83
3	Total Temperature Probes	86
3.1	Thin-Wire Probes	87
3.2	Heat Transfer Probes	91

3.3	Other Techniques	93	
4	Concentration	94	
4.1	Hot-Wire Techniques	94	
4.2	Scattering Techniques	96	
4.3	Molecular-Beam Sampling Techniques	100	
	References	100	
<b>CHAPTER 5 MEASUREMENT OF GAS DENSITY IN UNSTEADY FLOWS</b>			
	<i>M. J. Lewis and J. F. Wendt</i>		<b>103</b>
1	Introduction	103	
2	Schlieren and Interferometry Techniques	103	
2.1	Schlieren Systems	104	
2.2	Interferometers	108	
2.3	Holography	110	
3	Electron-Beam Techniques	112	
3.1	Beam Attenuation	114	
3.2	Beam Scattering	114	
3.3	Beam-Induced Fluorescence	115	
4	Raman Spectroscopy	118	
5	Summary	119	
	References	119	
	Schlieren and Interferometric Techniques	119	
	Electron-Beam Techniques	120	
	Raman Spectroscopy	121	
<b>CHAPTER 6 HOT-WIRE AND HOT-FILM ANEMOMETERS</b>			
	<i>G. Comte-Bellot</i>		<b>123</b>
1	Introduction	123	
2	Operating Principle	124	
3	Steady Heat-Loss Laws	129	
4	Wire of Finite Length	135	
5	Dynamic Response of the Wire (The Small Overheat Case)	137	
5.1	General Form	137	
5.2	Small-Amplitude Case	139	
5.3	Large-Amplitude Case	140	
6	Constant-Current Anemometer	144	
7	Constant-Temperature Anemometer	144	
7.1	Small-Amplitude Case	144	
7.2	Large-Amplitude Case	147	
7.3	Linearizer	148	
8	Calibration Techniques	148	
9	Separation of the Different Fluctuations	150	
10	Space Resolution: The "Length Correction"	153	
11	Aerodynamic Perturbations of the Probes	154	

12	Wall-Cooling Effect	156
13	Conclusion	156
	References	158
<b>CHAPTER 7 LASER-DOPPLER VELOCIMETRY</b>		
	<i>M. Riethmuller</i>	<b>163</b>
1	Introduction	163
2	General Characteristics of LDV	164
2.1	Summary of Basic Principles	164
2.2	Practical Designs	166
2.3	Data Processing	168
3	Application of the LDV in Unsteady Flows	169
3.1	Limitations of Conventional LDVs	169
3.2	Special Requirements for Unsteady Flow Measurements	173
3.3	Seeding and Drop Out	180
4	Applications	184
5	Future Developments	185
6	Conclusion	185
	Nomenclature	185
	Subscripts	186
	References	186
<b>CHAPTER 8 MEASUREMENT IN COMBUSTION PROCESSES</b>		
	<i>J. Swithenbank</i>	<b>189</b>
1	Introduction	189
2	Unsteady Fluid-Dynamic Phenomena in Combustion	189
2.1	Turbulent Combustion	190
2.2	Oscillatory Combustion	192
2.3	Detonation	194
2.4	Supersonic Combustion	194
2.5	Blowdown Combustor Facilities	194
2.6	Piston-Engine Combustion	195
2.7	Two-Phase Combustion	195
3	Instrumentation	196
3.1	Pressure	196
3.2	Temperature	198
3.3	Emissivity	200
3.4	Heat Flux	200
3.5	Gas Density	201
3.6	Optical Measuring Techniques	202
3.7	Velocity	204
3.8	Concentration	206
3.9	Flow Rate	209
3.10	Ionization	210
3.11	Swirl	210

4 Conclusion	211	
References	211	
<b>CHAPTER 9 ANALOG AND DIGITAL STORAGE AND DISPLAY SYSTEMS</b>	<i>J. Swithenbank</i>	<b>213</b>
1 Introduction	213	
2 Information Theory	214	
3 Analog Systems	215	
3.1 Time	215	
3.2 Pen Recorders	216	
3.3 Ultraviolet Oscillograph	216	
3.4 Oscilloscope/Storage Scope/Camera	217	
3.5 Magnetic Recording	217	
3.6 Digital Analog Systems	218	
3.7 Optical Recording	219	
4 Digital Recording	220	
4.1 Paper Tapes	221	
4.2 Magnetic Tape	222	
4.3 Magnetic Disk	222	
4.4 Fast Memory	222	
4.5 Interfacing	223	
5 Laboratory Digital Systems	225	
5.1 Averaging	226	
5.2 Correlation	227	
5.3 Data Analysis	228	
5.4 Fast Fourier Transform	228	
5.5 Convert	229	
5.6 BASIC and FORTRAN	229	
6 Conclusion	230	
<b>CHAPTER 10 AN APPROACH TO IMPLEMENTATION OF DIGITAL SYSTEMS FOR SIGNAL ANALYSIS</b>	<i>G. C. Vansteenkiste</i>	<b>231</b>
1 Introduction	231	
2 Information Exchange between Mixed-Data Signals	231	
3 Hardware for Mixed-Data Signals	236	
3.1 Simultaneous Analog-Digital Conversion	242	
3.2 Closed-Loop Analog-Digital Converters	242	
3.3 Analog-Digital Conversion by Subranging	244	
3.4 Time-Interval Analog-Digital Converter	246	
4 On-Line Data-Acquisition and Digital Computation	248	
5 Some Techniques for Data Analysis	254	
6 Conclusion	260	
References	260	

<b>CHAPTER 11</b>	<b>SPACE-TIME CORRELATIONS</b>	<i>G. Comte-Bellot and J. Sabot</i>	<b>261</b>
1	Introduction		261
2	Generalities		261
3	Homogeneous Isotropic Turbulence without Mean Velocity		262
4	Wind-Tunnel Experiments: Grid-Generated Turbulence		265
5	Experimental Procedure		268
6	Homogeneous Anisotropic Turbulence		275
7	Usual Turbulence with Large, Monotonic (Inhomogeneous) Mean Shear		278
8	Correlations Near Free Edges of Turbulent Flows		282
9	Correlations in the Core Region of Turbulent Flows		284
10	Lagrangian Correlations		285
11	Conclusion		288
	References		288
<b>CHAPTER 12</b>	<b>CONDITIONAL SAMPLING</b>	<i>J. P. Schon and G. Charnay</i>	<b>291</b>
1	Introduction		291
2	Definitions		293
2.1	Intermittency Function		294
2.2	Conditional Averages		295
2.3	Local Fluctuations		296
2.4	Relations between the Sampled Quantities		296
3	Detection Criteria		297
3.1	Detection Level		299
3.2	Detection Signals for Free Boundaries of Turbulent Flows or for Transition Intermittency		302
3.3	Detection Quantities for the Other Kinds of Intermittencies		306
4	Experimental Devices		307
4.1	Free Boundary of Turbulent Flow Intermittency		307
4.2	Other Kinds of Intermittencies		313
5	Experimental Results		314
5.1	Free Boundary of a Turbulent Boundary Layer		315
5.2	Intermittency of Large-Scale Structure in the Central Region of a Pipe		318
6	Conclusion		322
	Nomenclature		322
	References		323
	<i>Author Index</i>		327
	<i>Subject Index</i>		333
