

Contents

Introduction.....	1
1. Linear Acoustics. Equations and Limits of Applicability.....	5
2. Information from Shock Wave Theory	11
1. Plane Waves of Finite Amplitude in Media without Dispersion.....	15
1. Spectral Approach to Nonlinear Waves.....	15
2. Simple Waves in Nonlinear Acoustics	17
3. Graphical Analysis of the Deformation of the Profile of a Simple Wave.....	22
4. Formation of Discontinuities in a Simple Wave ...	26
5. Propagation of Riemann Waves (within the Framework of the Second Approximation)	29
2. Plane Waves of Finite Amplitude in Media without Dispersion (Elastic Heat-Conducting Medium).....	39
1. Derivation of the Burgers Equation.....	39
2. Solution of the Burgers Equation for a Periodic Disturbance.....	42
3. Solution of the Burgers Equation for a Periodic Disturbance (Exact Solution).....	47
4. Solution of the Burgers Equation for Nonperiodic Disturbances.....	54
3. Spherical and Cylindrical Waves of Finite Amplitude	63
1. Derivation of the Equations	63
2. Medium without Dispersion	65

3.	Dissipative Medium. Quasi-Stationary Solutions . .	68
4.	Structure of a Cylindrical Shock Wave. The Self-Similar Approach	70
5.	General Structure of Spatially Symmetric Waves with Account of Nonlinearity and Dissipation	73
6.	Features of Propagation of Converging and Diverging Waves	75
4.	Sound Waves in Dispersive Media	79
1.	The Dispersive Properties of a Medium. A Medium with Relaxations.	79
2.	Weak and Strong Dispersion.	85
3.	Propagation of Finite Disturbances in a Relaxing Medium	88
5.	Interaction of Sound Waves	97
1.	Collinear Interaction of Plane Waves.	97
2.	Scattering of Sound by Sound	107
3.	Standing Waves of Finite Amplitude.	120
4.	On the Interaction of Sound with Waves of Another Form.	130
6.	Parametric Phenomena in Sound Waves . .	137
1.	Three-Particle Parametric Interactions	137
2.	Parametric Sound Amplification in Media without Dispersion.	145
3.	Parametric Amplification of Sound in Artificial Systems with Dispersion	158
7.	Nonlinear Self-Action of Waves. Effects of Higher Orders	167
1.	Gas-Dynamic Approach to the Theory of Finite-Amplitude Wave Propagation	167
2.	Calculation of Waves Reflected from Discontinuities	170
3.	The Constant Component as a Consequence of the Nonlinear Self-Action of Waves	175
4.	Modified Nonlinear Acoustical Approach. Simple Waves with Account of Reflection.	178

8. Acoustic Streaming	187
1. Derivation of the System of Equations for Acoustic Streaming.	187
2. Eckart Streaming.	191
3. Multidimensional Streaming.	197
4. Other Types of Streaming	206
5. Laws of Similarity and Classification of Acoustic Streaming	210
9. Propagation of Bounded Sound Beams	213
1. Equation of the Nonlinear Acoustics of Bounded Beams.	213
2. The Parabolic Equation. Some Problems of Linear Diffraction Theory.	216
3. Nonlinear Effects in Sound Beams.	220
4. Approximate Solutions for Large and Small N Numbers.	223
5. Nonlinear Geometric Acoustics. Distortion of Unipolar Disturbances	228
10. Statistical Phenomena in Nonlinear Acoustics	239
1. Randomly Modulated Sound Waves.	239
2. General Theory of Nonlinear Evolution of the Spectra of a Random Sound Field in the Absence of Dissipation	248
3. Interaction of Modulated Waves	254
4. Quasi-Harmonic Signals in the Presence of Phase Fluctuations Only.	257
5. The Interaction of Regular Waves with Random Waves	259
