CHAPTER I

FOUNDATIONS OF ELASTIC SHELL THEORY

by P. M. NAGHDI

1. INTRODUCTION	3
2. PRELIMINARIES AND THE GEOMETRY OF A SURFACE	5
2.1 The geometry of Euclidean space	6
2.2 Some results from the geometry of a surface	8
2.3 Lines of curvature on the surface	14
3. RELATIONSHIPS BETWEEN SPACE AND SURFACE TENSORS AND THEIR DERIVATIVES IN NORMAL COORDINATES	16
3.1 A restriction on the space of normal coordinates	16
3.2 Expressions for the space Christoffel symbols	18
3.3 Relationships between space and surface tensors	22
4. DEFORMATION AND STRAIN	25
4.1 Measures of strain and deformation in a shell. A two point field description	26
4.2 Additional results under the Kirchhoff hypothesis	30
4.3 Measures of strain. Alternative description	31
4.4 Compatibility equations	34
5. STRESS AND COUPLE RESULTANTS. EQUATIONS OF EQUILIBRIUM	39
5.1 Stress and couple resultants. Load resultants	40
5.2 Equations of equilibrium	44
5.3 Equations of equilibrium. Alternative method	47
6. THE CONSTITUTIVE EQUATIONS OF THE LINEAR THEORY	48
6.1 Derivation of the constitutive equations for anisotropic shells. General considerations	51
6.2 Approximate constitutive equations. Equations of Flügge-Lur'e-Byrne and Love's first approximation	61
6.3 The approximate constitutive equations of Novozhilov, Koiter, and Sanders.	68
6.4 A critique of existing approximate constitutive equations	75
6.5 Further approximations.	78
7. REMARKS ON THE GENERAL THEOREMS OF THE LINEAR THEORY	79
ACKNOWLEDGEMENT	86
NOTATION	87
REFERENCES	88

CHAPTER II

SOME EXTREMUM PRINCIPLES IN IRREVERSIBLE
THERMODYNAMICS WITH
APPLICATION TO CONTINUUM MECHANICS

by H. ZIEGLER

1. INTRODUCTION	93
2. STATISTICAL FOUNDATIONS	97
2.1 The macrosystem	97
2.2 The microsystem	98
2.3 Limitation of the system	103
2.4 The Hamiltonian approach	105
2.5 Statistical treatment	107
3. CLASSICAL THERMODYNAMICS	112
3.1 Equilibrium states	112
3.2 Intrinsic energy and entropy	115
3.3 The quantum mechanical approach	117
3.4 Quasistatic processes	118
3.5 The first fundamental theorem	121
3.6 The second fundamental theorem	122
3.7 Some consequences	126
3.8 The third fundamental theorem	128
4. IRREVERSIBLE THERMODYNAMICS	128
4.1 Some extremum principles	128
4.2 Some consequences	135
4.3 An inversion	138
4.4 Quasihomogeneous dissipation functions	140
4.5 Homogeneous dissipation functions	144
4.6 Other extremum principles	148
5. APPLICATION TO CONTINUA	149
5.1 Composite systems	149
5.2 Deformation and stress	152
5.3 Constitutive equations	156
5.4 Heat flux	159
6. CONSTITUTIVE EQUATIONS	161
6.1 Elastic solids	161
6.2 A special case of viscoelasticity	164
6.3 Viscous fluids	168
6.4 Incompressibility and absence of volume viscosity	172
6.5 A special case of viscoplasticity	176
6.6 Other limiting cases of the viscous fluid	179
6.7 Plastic solids	181
6.8 Plastic response in the large	184
6.9 A fluid with limited rate of distortion	188
7. CONCLUDING REMARKS	189
ACKNOWLEDGMENTS	191
