CHAPTER I. FUNDAMENTALS

1. Problems Dealt With in the Course	9
2. Assumptions in Strength of Materials	13
3. External Forces (Loads)	16
4. Deformations and Displacements	19
5. Method of Sections	21
6. Stresses	23

CHAPTER II. TENSION AND COMPRESSION

7. Determination of Internal Forces	29
8. Determination of Stresses	30
9. Basic Types of Problems in Tension-Compression	32
10. Determination of Deformations and Displacements	33
11. Experimental Study of the Properties of Materials	41
12. Choice of Allowable Stresses	56
13. Statically Indeterminate Problems in Tension and Compression	58
14. Thermal Stresses	64
15. Stresses on Inclined Sections under Tension (Compression) in One Direction	68
16. Law of Conjugate Shearing Stresses	69
17. Determination of Stresses on Inclined Sections under Tension (Compression) in Two Directions	70
18. Determination of Principal Stresses and Position of Principal Areas	72
19. Relation Between Strains and Stresses in Plane and Three-Dimensional States of Stress (Generalised Hooke's Law)	76
20. Work of External and Internal Forces in Tension (Compression). Potential Energy of Strain	78
21. Stress Concentration. Contact Stresses	82

CHAPTER III. SHEAR

22. Determination of Stresses	88
23. Deformations in Shear	93

24. Potential Energy in Shear. Relation Between Three Elastic Constants E , G and μ	94
---	----

CHAPTER IV. GEOMETRICAL CHARACTERISTICS
OF SECTIONS

25. Statical Moment of an Area	98
26. Moment of Inertia of an Area	100
27. Relation Between Moments of Inertia with Respect to Parallel Axes	102
28. Moments of Inertia of Simple Sections	103
29. Moments of Inertia of Composite Figures	106
30. Change of Moments of Inertia with Rotation of Axes	106
31. Principal Axes of Inertia and Principal Moments of Inertia	108
32. Relation Between Products of Inertia with Respect to Two Sets of Parallel Axes	109

CHAPTER V. TORSION

33. Construction of Twisting Moment Diagrams	114
34. Determination of Stresses in Bars of Circular Cross Section	117
35. Relation Between Moment Transmitted by the Shaft, Power and Angular Velocity	122
36. Deformations of Circular Bars in Torsion	123
37. Construction of Diagrams for Angles of Twist	126
38. Potential Energy in Torsion	129
39. Basic Results of Theory of Torsion of Non-Circular Bars	130
40. Torsion of Thin-Walled Bars of Closed Section	133
41. Statically Indeterminate Problems	137
42. Stress Concentration	140
43. Rational Shapes of Sections in Torsion	141

CHAPTER VI. BENDING.
DETERMINATION OF STRESSES

44. Basic Concepts in Bending	145
45. Types of Supports of Beams	146
46. Determination of Reactions of Supports	147
47. Determination of Internal Forces	149
48. Sign Rule for Bending Moments and Shearing Forces	150
49. Relation Between Bending Moment, Shearing Force and Intensity of Distributed Load	152
50. Construction of Bending Moment and Shearing Force Diagrams	154
51. Determination of Normal Stresses	164
52. Condition of Strength Based on Normal Stresses	169
53. Determination of Shearing Stresses	172
54. Stresses on Inclined Sections of a Beam. Principal Stresses	179
55. Stress Concentration in Bending	180
56. Potential Energy of Strain in Bending	182

CHAPTER VII. BENDING.
DETERMINATION OF DISPLACEMENTS

57. Differential Equation of Elastic Curve	184
58. Determination of Displacements When There Are Several Regions of Loading. Universal Formula	189
59. Examples of Determining Displacements in Bending by Use of the Universal Formula	193
60. Determination of Displacements in Beams of Variable Rigidity by Use of the Universal Formula	198
61. Reciprocal Theorem	200
62. Mohr's Method of Determining Displacements	204
63. Analysis of Statically Indeterminate Beams	214
64. Examples of Calculating Statically Indeterminate Beams	218
65. Analysis of Simplest Statically Indeterminate Systems . .	222
66. Rational Arrangement of Supports of Beams	230
67. Rational Shapes of Cross Sections of Beams	233

CHAPTER VIII. STRENGTH THEORIES

68. Object of Strength Theories	240
69. First Theory of Strength	246
70. Second Theory of Strength	248
71. Third Theory of Strength	249
72. Energy Theories of Strength	251
73. Trends in the Development of Strength Theories	253

CHAPTER IX. COMPLEX DEFORMATIONS
(COMPLEX RESISTANCE)

74. Basic Concepts	258
75. Example of Constructing Internal Force Diagrams for Bar with Broken Axis	259
76. Bending in Two Planes (Oblique Bending)	262
77. Bending with Tension (Compression)	268
78. Eccentric Compression (Tension)	270
79. Core of a Cross Section	275
80. Torsion and Shear. Design of Closely Coiled Springs . .	277
81. Torsion with Bending	280
82. Torsion with Bending and Tension (Compression)	284
83. An Example of Design of a Shaft Subjected to Bending with Torsion	286
84. Analysis of Thin-Walled Vessels	288

CHAPTER X. STABILITY ANALYSIS
OF COMPRESSED MEMBERS (BUCKLING)

85. Stable and Unstable Configurations of Equilibrium . . .	295
86. Euler's Formula for the Critical Force	297
87. Effect of End Conditions of a Column	300

88. Limits of Applicability of Euler's Formula	301
89. Empirical Formulas for Determining Critical Stresses . .	302
90. Practical Formula for Stability Analysis	303
91. Rational Shapes of Sections of Compression Members . .	304
92. Bending Induced by Axial Loading	308

CHAPTER XI. STRENGTH ANALYSIS
UNDER DYNAMIC LOADS

93. Dynamic Loads	315
94. Calculation of Stresses in Uniformly Accelerated Motion	316
95. Strength Analysis under Impact	318
96. Testing of Materials under Impact Loading (Impact Test)	322
97. Free Vibrations of a System with One Degree of Freedom . .	325

CHAPTER XII. STRENGTH ANALYSIS UNDER
ALTERNATING STRESSES (FATIGUE ANALYSIS)

98. Basic Definitions	329
99. Fatigue Curve for Complete Reversals of Stresses. Endurance Limit	332
100. Endurance Limit Diagram	335
101. Factors Affecting the Endurance Limit	339
102. Determination of Safety Factors for Completely Reversed Cy- cles of Stress	344
103. Determination of Safety Factor for Any Cycle of Varying Stress	344
104. Practical Measures to Combat Fatigue of Materials . . .	347
105. Examples of Fatigue Analysis	348

CHAPTER XIII. RESISTANCE OF MATERIALS
TO PLASTIC DEFORMATIONS. LIMIT DESIGN

106. Design Diagrams for an Elastic-Plastic Material	354
107. Plastic Design of Statically Indeterminate Systems Acting in Tension-Compression	356
108. Plastic Torsion of a Circular Bar	359
109. Plastic Bending of Statically Determinate Beams	361
110. Yield Conditions	364
111. Plastic Torsion with Tension of a Circular Bar	364
112. Plastic Bending with Tension and Shear	365
113. Elements of Creep Design	365
114. The Basic Principles of Limit Design	371
BIBLIOGRAPHY	374
