CONTENTS

PREFACE

INTRODUCTORY LECTURE

C.A. BREBBIA
"Approximate models for fluid flow" 3

SECTION 1 GENERAL VISCOUS FLOW

1. P.J. ROACHE
"Semidirect calculation of steady two- and three dimensional flows" 17

2. R. GLOWINSKI, B. MANTEL, J. PERIAUX and O. PIRONNEAU
"H^{-1} least squares method for the Navier-Stokes equations" 29

3. R. PEYRET
"A Hermitian finite difference method for the solution of the Navier-Stokes equations" 43

4. J.D. WASKIEWICZ and C.H. LEWIS
"Parabolized Navier-Stokes solutions for hypersonic viscous flows over blunt cones at large angles of attack" 55

5. S.C.R. DENNIS and J.D. HUDSON
"A difference method for solving the Navier-Stokes equations" 69

6. J.Z. JOHNSON and B. TABARROK
"Stream function - stress function approach to incompressible flows" 81

7. G.E. SCHNEIDNER, G.D. RAITHBY and M.M.YOVANOVICH
"Finite element analysis of incompressible fluid flow incorporating equal order pressure and velocity interpolation" 89

8. D.K. GARTLING and P.J. ROACHE
"Efficiency trade-offs of steady-state methods using FEM and FDM" 103

9. A. DI CARLO, R. PIVA and G. GUI 113
"Numerically mapped macro-elements for multiply connected flow fields"

10. P. BAR-YOSEPH, J.J. BLECH and A. SOLAN 121
"Upwind schemes for the finite element solution of the Navier-Stokes equations in rotating flow"

11. P.McCOMBER, G. TOUZOT and J.F. COCHET 133
"A comparison of different finite elements and formulations for the solution of the steady viscous flow"

12. A. KANARACHOS 147
"Ritz-Galerkin and least squares finite element methods for incompressible viscous flow"

13. K.E. BARRETT and G. DEMUNSHI 159
"Numerical methods for recirculating flow"

14. F. FEUILLEBOIS and A. LASEK 171
"Significant degeneracies of the equations of a suspension for large Reynolds number"

15. M. BERCOVIER and O. PIRONNEAU 179
"Comparisons and error estimates for several finite elements for the numerical simulation of incompressible viscous flows"

16. C.J. BATES and P.K. BANERJEE 191
"Laminar flow measurements in a square duct using Laser Doppler anemometry"

SECTION 2 TURBULENT FLOW

1. A.J. BAKER 203
"Finite element analysis of turbulent flows"

2. S.F. BIRCH 231
"Turbulent length scales in non-equilibrium flows"

3. D.R. SCHAMBER and B.E. LAROCK 245
"Computational aspects of modelling turbulent flows by finite elements"

4. F.J.K. IDERIAH 257
"On turbulent forced convection in a square cavity"

5. A.D. GOSMAN and C.W. RAPLEY 271
"A prediction method for fully-developed flow through non-circular passages"

6. H. HA MINH and P. CHASSAING 287
"Some numerical predictions of incompressible turbulent flows"

7. U. RICKLEFS., L.E. FINK and C.R. SYMES 301
"Predictions of the wake behind circular cylinders in nearly homogeneous turbulent streams"

8. R.M. LI, J.D. SCHALL and D.B. SIMONS 317
"Modeling of turbulent intensity in open channel flows"

9. I.P. CASTRO 329
"The numerical prediction of recirculating flows"

10. C. TAYLOR, J.J. HARPER, T.G. HUGHES and K. MORGAN 341
"An analysis of developing turbulent flow in a circular pipe by the Finite Element Method"

SECTION 3 BOUNDARY LAYER ANALYSIS

1. D.L.DWOYER, C.H. LEWIS and J.A. HILL 353
"Laminar and/or turbulent three-dimensional incompressible boundary layers including surface heat transfer and curvature effects"

2. C.M. BRAUNER, M.H. CROLET, M. MISITI and B.GAY 369
"Optimal control of the laminar boundary layer by blowing or suction at the wall"

3. E. ZAGUSTIN, R. KALABA and G. IKEDA 379
"Solution of the Falkner-Skan equation by quasi-linearization"

4. S.F. WORNOM 387
"Application of higher-order numerical methods to the boundary layer equations"

5. M. HANIN, M. WOLFSHTEIN and U.E. LANDAU 399
"Numerical Navier-Stokes solution for the effects of suction on shock wave-boundary layer interaction"

6. J. SCHROPPEL and J. THIELE 411
"Numerical method for the calculation of binary gas mixture condensation in boundary layer flow"

7. E.H. HIRSCHEL 421
"Boundary-layer equations in holonomic formulation"

8. V. LOSITO and C. De NICOLA 433
"A new viscous-inviscid flow interaction method"

SECTION 4 FLOW WITH HEAT TRANSFER

1. A.MOULT, V.S. PRATAP and D.B. SPALDING 443
"Calculation of steady, two-dimensional, two-phase flow and heat transfer in a steam generator"

2. J.G.M. De BRUIJN and M.W. HESLENFELD 455
"Multimode heat transfer in sodium pumps"

3. A.J. OLIVER 467
"A finite difference solution for turbulent flow and heat transfer over a backward facing step in an annular duct"

4. S. NAKAZAWA, M. KAWAHARA and K. HASEGAWA 479
"On the finite element analysis of thermal diffusion"

5. D.K. GARTLING 489
"Finite element analysis of convective heat transfer problems with change of phase"

6. K. ANTONOPOULOS, A.D. GOSMAN and R. ISSA 501
"Flow and heat transfer in tube assemblies"

7. J.N. LILLINGTON 515
"A comparison of finite difference methods for the prediction of temperature in recirculating flows in rod cluster geometry"

8. J. DONEA, S. GIULIANI and H. LAVAL 527
"Explicit finite element solution to transient convective-conductive heat transfer problems"

9. B.P.L. PANDE and G. AL-MASHIDANI 539
"Temperature distribution profiles for bluff buoyant jets"

10. A.R. CHANDRUPATLA and V.M.K. SASTRI 547
"Laminar flow and heat transfer to a power law, pseudoplastic fluid in the entrance region of a square duct with uniform axial and peripheral heat flux"

11. V.M. SOUNDALGEKAR and G.A. DESAI 559
"Heat transfer in the entry length with laminar flow in concentric annuli with constant heat flux"

12. R.J. SHARMA, R.J. HOPKIRK and P.J. PRALONG 569
"Practical developments in the modelling of turbulent heat transfer"

SECTION 5 FREE SURFACE FLOWS AND LUBRICATION

1. U. MEISSNER 587
"An explicit-implicit finite-element concept for the solution of long-period water-wave problems"

2. E.W. MINER, M.J. FRITTS and O.M. GRIFFIN 597
"A finite-difference method for calculating free surface waves"

3. J. MOE, J.P. MATHISEN and S. HODGINS 609
"An improved method for the computation of shallow water waves"

4. G. AL-MASHIDANI and B.B.L. PANDE 619
"Kinematic wave approximation to two dimensional surface run off models"

5. F. MARTELLI and G.P. MANFRIDA 627
"Some applications of finite element technique in journal bearings hydrodynamics"

6. H.P. EVANS, S. BISWAS and R.W. SNIDLE 639
"Numerical solution of isothermal point contact elastohydrodynamic lubrication problems"

7. M.J. O'CARROLL 657
"A finite element for a mild singularity in lubrication"

8. M. ONOFRI, R. PIVA and A. SESTIERI 665
"Dynamic behaviour of a slider bearing flow under a time dependent loading"

9. G.B. EKE and J.O. MEDWELL 673
"Turbulent flow between surfaces in relative motion"

SECTION 6 TURBOMACHINERY AND AIRFOIL FLOW

1. W.G. HABASHI and E.G. DUECK — 689
"The finite element method for turbomachinery analysis"

2. U.K. SINGH — 697
"Computation of transonic flows in cascade with shock and boundary layer interaction"

3. P. SEROU and L.F. TSEN — 709
"Incompressible turbulent flow in 2-D air intake at high incidence by finite element method"

4. C. BOSMAN and J. HIGHTON — 717
"The computation of three-dimensional viscous, compressible flow"

5. A.L. MURRAY and C.H. LEWIS — 731
"Hypersonic three-dimensional viscous shock layer flows"

6. D.R. CROFT, P.D. WILLIAMS and S.N. TAY — 741
"Numerical analysis of jet pump flows"

SECTION 7 TWO PHASE FLOW AND METEOROLOGY

1. A.A. LAKIS — 757
"Numerical analysis of wall-pressure fluctuations in two-phase flow"

2. J. STEPPLER — 769
"On the use of high order finite elements for initial value problems"

3. H.N. LEE — 781
"Finite element numerical study of atmospheric turbulent motion and diffusion in planetary boundary layer"

4. D.B. HAIDVOGEL — 793
"Limited-area integration of the baratropic vorticity equation: an intercomparison of the finite difference, finite element and pseudo-spectral techniques"

SECTION 8 MASS TRANSPORT AND CONVECTION

1. B.P. LEONARD, M.A. LESCHZINER and J.McGUIRK 807
"Third-order finite-difference method for steady two-dimensional convection"

2. M. KATAGIRI and I. POP
"Transient free convection on an isothermal sphere" 821

3. D.A.H. JACOBS and J.F. MacQUEEN 831
"Some numerical methods used in the study of warm water discharges"

4. C.J. SCOTT and P.H. SHIPP 851
"Temperature and moisture variations in stored grains"

SECTION 9 NUMERICAL AND MATHEMATICAL CONCEPTS

1. M.D. OLSON and S.Y. TUANN 873
"Computing methods for recirculating flow in a cavity"

2. W. SCHONAUER, G. GLOTZ and K. RAITH 885
"Self-adaptive solution techniques for difference methods"

3. D. CUNSOLO and P. ORLANDI 899
"Accuracy in non orthogonal grid reference systems"

4. H. ZIENKIEWICZ and L.A. BONSON 913
"Theoretical prediction of some arterial flows"

5. R.J. HANSEN and M.D. KELLEHER 923
"Numerical study of the hydrodynamic stability of pipe flows of Newtonian and viscoelastic fluids by a Chebyshev expansion function method"

6. J.C. HEINRICH, P.S. MARSHALL and O.C. ZIENKIEWICZ 935
"Penalty function solution of coupled convective and conductive heat transfer"

7. J.F. MILTHORPE and G.P. STEVEN 947
"A nodal finite element solution technique for simple and complex fluid flow problems"

8. S.F. SHEN, M.A. MORJARIA and R.K.UPADHYAY 959
"A special-element technique for two-dimensional creeping viscous flow in a domain with sharp corners"

9. A. PRAMILA and E-M SALONEN 971
"A u,v-formulation for ideal fluid flow"

10. R.L. SANI, P.M. GRESHO, D.R. TUERPE and R.L. LEE 983
"The imposition of incompressibility constraints via variational adjustment of velocity fields"

11. L.C. WELLFORD, Jr. 995
"Calculation of free surface hydrodynamic problems using a finite element method with a hybrid Lagrange line"
