ENGINEERING SOCIETIES MONOGRAPHS . . . . .	v
PREFACE . . . . .	vii
INTRODUCTION . . . . .	xv
<b>CHAPTER I</b>	
ELEMENTS OF HYDRODYNAMICS. . . . .	1
1. The Equation of Euler for One-dimensional Flow. . . . .	1
2. The Equation of Bernoulli for One-dimensional Flow; Three-dimensional Equation of Euler . . . . .	3
3. Definition of Viscosity; Equation of Navier-Stokes. . . . .	4
<b>CHAPTER II</b>	
LAWS OF SIMILARITY . . . . .	6
4. The Law of Similarity under the Action of Inertia and Viscosity. . . . .	6
5. The Law of Similarity under the Action of Inertia and Gravity. . . . .	9
6. Relation between Considerations of Similarity and Dimensional Analysis . . . . .	11
<b>CHAPTER III</b>	
FLOW IN PIPES AND CHANNELS. . . . .	14
A. Laminar Flow. . . . .	14
8. General. . . . .	14
9. The Fundamental Investigation of Hagen. . . . .	15
10. The Investigation of Poiseuille. . . . .	16
11. The Law of Hagen-Poiseuille. . . . .	17
12. Derivation of Hagen-Poiseuille's Law from Newton's Viscosity Law . . . . .	19
13. Limits of the Validity of the Hagen-Poiseuille Law. . . . .	21
14. Phenomena Near the Entrance of the Tube . . . . .	21
15. The Length of Transition . . . . .	22
16. The Pressure Distribution in the Region Near the Entrance. . . . .	23
17. The Correction Term for Kinetic Energy . . . . .	24
18. The Velocity Distribution in the Region Near the Entrance. . . . .	25
19. The Pressure Drop in the Entrance Region in the Case of Laminar Flow . . . . .	26
20. The Importance of the Pressure Drop in the Entrance Region for Viscosity Measurements . . . . .	28
B. The Transition between Laminar and Turbulent Flow . . . . .	29
21. The First Investigations by Hagen. . . . .	29
22. The Fundamental Investigation by Reynolds . . . . .	30
23. The Critical Reynolds' Number . . . . .	32
24. Influence of the Initial Disturbance on the Critical Reynolds' Number . . . . .	33

	PAGE
25. The Conditions at the Transition between Laminar and Turbulent Flow . . . . .	35
26. Intermittent Occurrence of Turbulence . . . . .	36
27. Measurements of Pressure Drop at the Transition between Laminar and Turbulent Flow . . . . .	38
28. Independence of the Critical Reynolds' Number of the Length of the Tube . . . . .	38
C. Turbulent Flow . . . . .	40
29. Historical Formulas for the Pressure Drop . . . . .	40
30. The Resistance Formula of Blasius for Smooth Tubes . . . . .	41
31. The Resistance Law for Rough Tubes . . . . .	43
32. Roughness and Waviness of the Walls . . . . .	44
33. Measurement of the Mean Velocity of a Turbulent Flow by Means of a Pitot Tube . . . . .	46
34. The Turbulent Velocity Distribution . . . . .	47
35. The Turbulent Velocity Distribution in the Region of Transition Near the Entrance of the Tube . . . . .	48
36. The Pressure Drop in the Turbulent Region of Transition . . . . .	51
37. Convergent and Divergent Flow . . . . .	52
CHAPTER IV	
BOUNDARY LAYERS . . . . .	58
38. The Region in Which Viscosity Is Effective for Large Reynolds' Numbers . . . . .	58
39. The Order or Magnitude of the Various Terms in the Equation of Navier-Stokes for Large Reynolds' Numbers . . . . .	59
40. The Differential Equation of the Boundary Layer . . . . .	62
41. Definition of Thickness of the Boundary Layer . . . . .	64
42. Estimate of the Order of Magnitude of the Thickness of the Boundary Layer for the Flow along a Flat Plate . . . . .	65
43. Skin Friction Due to a Laminar Boundary Layer . . . . .	67
44. Back Flow in the Boundary Layer as the Cause of Formation of Vortices . . . . .	68
45. Turbulent Boundary Layers . . . . .	70
46. The Seventh-root Law of the Turbulent Velocity Distribution . . . . .	70
47. Shear Stress at the Wall in the Case of a Turbulent Boundary Layer and the Thickness of This Layer . . . . .	74
48. Friction Drag Due to a Turbulent Boundary Layer . . . . .	76
49. Laminar Boundary Layer Inside a Turbulent One . . . . .	78
50. Means of Avoiding the Creation of Free Vortex Sheets and Their Consequences . . . . .	80
51. Influencing the Flow by Sucking Away the Boundary Layer . . . . .	81
52. Rotating Cylinder and Magnus Effect . . . . .	82
CHAPTER V	
DRAG OF BODIES MOVING THROUGH FLUIDS . . . . .	86
53. Fundamental Notions . . . . .	86
54. Newton's Resistance Law . . . . .	86
55. Modern Ideas on the Nature of Drag . . . . .	87

CONTENTS

xi

	PAGE
56. The Deformation Resistance for Very Small Reynolds' Numbers	88
57. The Influence of a Very Small Viscosity on the Drag . . . . .	89
58. The Relative Importance of Pressure Drag and Friction Drag with Various Shapes of the Body . . . . .	90
59. The Variation of the Drag with Reynolds' Number . . . . .	91
60. The Laws of Pressure Drag, Friction Drag, and Deformation Drag . . . . .	93
61. General Remarks on the Experimental Results . . . . .	95
62. The Relation $c = f(R)$ for the Infinite Cylinder . . . . .	96
63. The Region above the Critical Reynolds' Number . . . . .	98
64. The Resistance Law for Finite Cylinders, Spheres, and Stream- lined Bodies . . . . .	99
65. Resistance in Fluids with Free Surfaces; Wave Resistance . . . . .	101
66. The General Resistance Law . . . . .	103
67. Resistance to Potential Flow . . . . .	104
68. Drag of a Sphere Is Zero for Uniform Potential Flow . . . . .	105
69. Resistance Due to Acceleration . . . . .	107
70. Application of the Momentum Theorem . . . . .	108
71. Mutual Forces between Several Bodies Moving through a Fluid	109
72. Resistance with Discontinuous Potential Flow . . . . .	110
73. Stokes's Law of Resistance . . . . .	112
74. Experimental Verification for Water; Influence of the Walls of the Vessel . . . . .	114
75. Experimental Verification for Gases . . . . .	116
76. Correction of Stokes's Law by Oseen . . . . .	117
77. The Resistance of Bodies in Fluids of Very Small Viscosity . . . . .	118
78. The Resistance of the Half Body . . . . .	118
79. Momentum of a Source . . . . .	121
80. The Resistance of a Body Calculated from Momentum Con- siderations . . . . .	123
81. Method of Betz for the Determination of the Drag from Measurements in the Wake . . . . .	125
82. The Kármán Trail . . . . .	130
83. Application of the Momentum Theorem to the Kármán Trail . . . . .	132
84. Bodies of Small Resistance; Streamlining . . . . .	136
85. Comparison of the Calculated Pressure Distribution with the Experimental One . . . . .	137
86. Friction Drag of Flat Plates . . . . .	139

CHAPTER VI

AIRFOIL THEORY . . . . .	144
A. Experimental Results . . . . .	144
87. Lift and Drag . . . . .	144
88. The Ratio of Lift to Drag; Gliding Angle . . . . .	144
89. The Lift and Drag Coefficients . . . . .	146
90. The Polar and Moment Diagrams of an Airfoil . . . . .	147
91. Relation between the Flying Characteristics of Airfoils and Their Profiles . . . . .	149
92. Properties of Slotted Wings . . . . .	152

	PAGE
93. The Principle of Operation of a Slotted Wing . . . . .	153
94. Pressure Distribution on Airfoils. . . . .	156
B. The Airfoil of Infinite Length (Two-dimensional Airfoil Theory) . . . . .	158
95. Relation between Lift and Circulation . . . . .	158
96. The Pressure Integral over the Airfoil Surface . . . . .	160
97. Derivation of the Law of Kutta-Joukowski by Means of the Flow through a Grid . . . . .	161
98. Derivation of the Lift Formula of Kutta-Joukowski on the Assumption of a Lifting Vortex . . . . .	163
99. The Generation of Circulation. . . . .	166
100. The Starting Resistance. . . . .	169
101. The Velocity Field in the Vicinity of the Airfoil . . . . .	170
102. Application of Conformal Mapping to the Flow round Flat or Curved Plates. . . . .	173
103. Superposition of a Parallel Flow and a Circulation Flow . . . . .	176
104. Determination of the Amount of Circulation . . . . .	178
105. Joukowski's Method of Conformal Mapping. . . . .	179
106. Mapping of Airfoil Profiles with Finite Tail Angle . . . . .	182
C. Three-dimensional Airfoil Theory . . . . .	185
107. Continuation of the Circulation of the Airfoil in the Wing-tip Eddies . . . . .	185
108. Transfer of the Airplane Weight to the Surface of the Earth. . . . .	186
109. Relation between Drag and Aspect Ratio . . . . .	188
110. Rough Estimate of the Drag. . . . .	189
111. The Jump in Potential behind the Wing. . . . .	191
112. The Vortex Sheet behind the Wing with Lift Tapering Off toward the Tips . . . . .	195
113. The Downward Velocity Induced by a Single Vortex Filament. . . . .	197
114. Determination of the Induced Drag for a Given Lift Distri- bution . . . . .	198
115. Minimum of the Induced Drag; the Lift Distribution of an Airfoil of Given Shape and Angle of Attack . . . . .	203
116. Conversion Formulas. . . . .	206
117. Mutual Influence of Bound Vortex Systems; The Unstaggered Biplane. . . . .	210
118. The Staggered Biplane . . . . .	213
119. The Total Induced Drag of Biplanes . . . . .	216
120. Minimum Theorem for Multiplanes. . . . .	219
121. The Influence of Walls and of Free Boundaries. . . . .	222
122. Calculation of the Influence for a Circular Cross Section . . . . .	224

## CHAPTER VII

EXPERIMENTAL METHODS AND APPARATUS. . . . .	226
A. Pressure and Velocity Measurements. . . . .	226
123. General Remarks on Pressure Measurement in Liquids and Gases. . . . .	226
124. Static Pressure. . . . .	226
125. Total Pressure. . . . .	228
126. Velocity Measurement with Pitot-static Tube . . . . .	229

CONTENTS

xiii

	PAGE
127. Determination of the Direction of the Velocity . . . . .	232
128. Fluid Manometers . . . . .	232
129. Sensitive Pressure Gages . . . . .	234
130. Vane Wheel Instruments . . . . .	239
131. Electrical Methods of Velocity Measurement . . . . .	241
132. Velocity Measurements in Pipes and Channels . . . . .	244
133. Venturi Meter . . . . .	244
134. Orifices . . . . .	245
135. Weirs . . . . .	246
136. Other Methods for Volume Measurement . . . . .	246
B. Drag Measurements . . . . .	247
137. The Various Methods . . . . .	247
138. Towing Tests . . . . .	247
139. The Method of Free Falling . . . . .	247
140. Rotating-arm Measurements . . . . .	249
141. Drag Measurement in the Natural Wind . . . . .	250
142. Advantages of Drag Measurement in an Artificial Air Stream . . . . .	251
C. Wind Tunnels . . . . .	252
143. The First Open Wind Tunnels of Stanton and Raibouchinsky . . . . .	252
144. The First Closed Wind Tunnels in Göttingen and London . . . . .	253
145. The First Wind Tunnel of Eiffel with Free Jet . . . . .	254
146. Modern English Tunnels . . . . .	256
147. The Large Wind Tunnel in Göttingen . . . . .	258
148. Wind Tunnels in Other Countries . . . . .	259
149. Suspension of the Models and Measurement of the Forces . . . . .	261
150. The Three-component Balance in Göttingen . . . . .	262
151. The Aerodynamic Balance of Eiffel . . . . .	264
D. Visualizing Flow Phenomena . . . . .	265
152. Fundamental Difficulties . . . . .	265
153. Mixing Smoke in Air Streams . . . . .	266
154. Motions in the Boundary Layer . . . . .	266
155. Three-dimensional Fluid Motions . . . . .	267
156. Two-dimensional Fluid Motions . . . . .	269
157. Advantage of Photographs over Visual Observations . . . . .	271
158. Streamlines and Path Lines . . . . .	271
159. Slow and Fast Moving Pictures . . . . .	272
160. Long-exposure Moving Pictures . . . . .	273
161. Technical Details . . . . .	274
 PLATES . . . . .	 277
